Poor Dickson-Hill's troubles ended in a climax at Gonerby, just after the breakfast stop, as he took a corner too fast, colliding with a heap of stones. All along the road and right through the night the police were of great assistance, but for the first time on a London-Edinburgh run the Newark constables exercised their authority. Just beyond the town one conscientious policeman evinced a marked interest in tail lamps, and enjoyed (from his point of view) excellent sport, and this, if you please, only shortly before lamps could be extinguished. One of the, travelling marshals fell a victim, but fortunately many others, owing to the fact that they rode in groups, escaped. By next year there must be some improvement in rear lighting arrangements.

The next check was at Doncaster, and outside the garage there was mounted an ancient high bicycle, and under it the words "disqualified, arrived too early." For the early comers the sun rose before reaching Retford, but the clouds soon hid it and the run was continued in cold dull weather with a rising south-westerly wind. H. B. Bröwning (3\(^2\) Scott), who burst a cover outside Doncaster, found a friend in need in the shape of a fireman. This

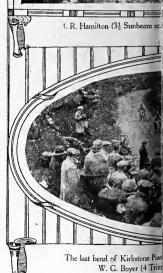

excellent sportsman ran to the fige station, cut off a piece of hose, slit it down the centre, and thus improvised an excellent gaiter, and when offered payment refused it, saying he was a fellow motorist and drove a 60 h.p. fire engine. Robertson-Browne (8 Henderson) picked up a nail between Newark and Grantham.

Rough Roads.

There was some very rough road north of Doncaster, quite the worst hitherto encountered, and this continued along the old route frequently followed in previous runs to the cross-roads, where the men were directed by one of the many useful A.A. scouts from the main road to Hare-Here the course is set in a wood. westerly direction, and the wind, which had hitherto been only tiresome, became really trying. Parts of the road were very rough, and the dust was so appalling that we almost prayed for a shower of rain, and wished that the excess of tar encountered in Hertfordshire had been directed to this part of the world. There was excellent organisation at the second breakfast at the Middleton Hotel, Ilkley, and numerous well-known northern riders were present to help at the check, Among these we may mention Norman Longfield and H. W. Fortune. At this point more than half of the total journey had been covered, but the next section held the crux of the trial.

The Climb up Kirkstone.

The Scott on which one member of our staff was travelling acquitted itself well, but Kirkstone proved its reāl worth. To say that the famous climb was dreaded by most of the competitors is no exaggeration. It was made out to be worse than it was, and chiefly, we believe, because those who had ascended it in the 1913 Six Days Trials and before had forgotten it. However, it is quite a fair hill, and every motor bicycle made should climb it. Its approach is narrow, and right in the village of Ambloside, and we had to take it with a non-competing car drawing a trailer full of petrol cans, partly blocking the fair way. The low gear was engaged at once,

and kept in as the engine roared its way up the numerous steep pitches and round the easy bends. Once we changed to top, then up and up the Scott soared. Then came a fast stretch over a falling grade, and afterwards the final "struggle" round a sharp bend and the worst was over.

Observations on Kirkstone Pass.

Kirkstone Pass proved an attractive vantage point for hundreds of motor cyclists and car owners, who nearly all congregated at the "Struggle," the culminating stretch, which is as steep as 1 in 4½ at one point.

The competitors were ahead of time. W. H. Wells, the M.C.C. club captain, led the way on a Chandler car, followed by J. Van Hooydonk (Phoenix car), Stuart Clark (7, F.N.) leading the competitors and incidentally making a good climb. It is, of course, impossible to individualise with such a big crowd of riders, but our three outstanding impressions after observing the riders ascend the Pass in more methods than one were:

(1.) The motor cyclists were none too successful, the lighter types of mounts providing an unusually high percentage of failures.

centage of failures.

(2.) The single-cylinder sidecar outfits were the surprise of the day, for, in the majority of cases, they made meritorious ascents.

(3.) The high-powered twin-cylinder sidecar outfits were disappointing, frequent cases of overheating occurring and failure from other causes.

Just how many failed on the foothills of krikstone it would be difficult to say, but a number were seen at the roadside on the lower steep stretches of the three miles almost continuous ascent of Kirkstone. Among those we noted for clean and excellent climbs were Hugh Gibson (2½ Clyno), H. G. Bell (7 F.N.), Gayford (5 Zenith), Sharratt (Indian Scout), Jones (3½ Ariel), Kaye Don (6 Zenith), Lucas (Zenith), Edwards, Spikins, and

McLellan (Harley-Davidsons), Salter (flat twin Zenith), Body (Sumbeam), Clark (Coulson B), Redvers-Johnson (Humber), Barclay (Reading Standard), and McRitchie (Triumph). During this succession of clean climbs there were, of course, a number of failures, and a certain amount of engine knocking by some who just got up this gruelling climb. Triumph and Sunbeam stood out among the best performances in the solo section, and Blackburne riders, too, though not fast, toured up with apparent ease and comfort. The Scott riders did well almost to a man, but their radiators were observed to be steaming in several instances. Boult on a Novton with Philipson pulley made a most meritorious ascent, passing three-speed mounts whose riders were footing or running alongside. Fleetwood we singled out as the best A.P.C. rider, though all did well.

The Passenger Machines.

When the side ars arrived in bulk, rain was falling thickly, and the surface was getting badly cut up. Bridgman (Indian sc.) was sandwiched among the solo mounts, and it is doubtful if any competitor made a better climb up the steepest stretch at the top. Wright (Henderson) was good, also Nott (Matchless), whilst Temple (Harley-Davidson) was so fast that in the thick mist he was obliged to keep his electric horn going to clear the way. Newnham (4 Sunheam) was one of the successful single-cylinder sidecarists, but Crostwaite (5 James sc.) made quite one of the best ascents of the day, his success being emphasised by the fact that he followed a number of disappointing riders on big twin outfits, who either failed or just scraped up. Longman (Harley) roared past a stranded sidecar, Biggs (A.J.S.) repeating the performance. Tippett (Acme) was good—in fact, the Acmes and their stable companions the Rex machines but one got up comfortably. Congratulations to Jefferys, the one-legged rider of a Norton, who got up very comfortably. Several Matchless riders did well, but others stopped

The "London-Edinburgh" described.

on the gradient with engines knocking. off the gradient with english shocking. Hargreaves (Royal Ruby) made a fine climb, also Hemy (A.J.S.), Wilkin (3½ Wilkin), Coney (3½ Wilkin), and Pulzer (Clyno). Shuttleworth and Sawer, both on- Norton sidecars, helped to confirm the impression that the single-cylinder the impression that the single-cylinder sidecars were showing up most conspicuously. Several were baulked by others who had "konked" out, and generally the record of failures was high. The Morgans did well, Eric Williams particularly; some of the others boiled badly, but kept going. Lush just got up on his A.B.C. sidecar. The excite-ment to clear the course when two or three sidecars stopped and another rider approached through the thick mist seemed to be greatly enjoyed by the onlookers. Towards the tail end, the Bashall brothers, both on Martinsyde-Newmans, came up comfortably. Once over the crest of Kirkstone (1,500 ft. up), there followed a drop into Patterdale, the atmosphere becoming clearer and the scenery once more observable.

Lunch at Patterdale was welcome enough, as the weather was cold and enough, as the weather was cold and raining. (Late arrivals had to climb and descend through the clouds.) Here we had ample opportunity of talking with many of the competitors. Colliver was greatly pleased with his Indian Scout, while that best of sportsmen, Applebee père, was delighted with his Levis. The new A.B.C.'s were a great contrast to the early model seen in last year's run, and had wonderfully clean crank cases. The old stagers, Triumphs, Zeniths, Ariels, Douglases, Lea-Francis, Humbers, etc., were doing well, and many of the newcomers, the Metro-Tylers, Coulsons, A.B.C.'s, Precisions, Duzmos, and the like, were establishing buznos, and the like, were essavishing their reputations. The worst of the run was now over, and the going was easy to Carlisle, after which the John-o'-Groat's route was followed to Beattock. At Moffat an excellent and much appreciated tea was served, and then followed the last non-stop section. Why this was chosen no one knows. If Kirkstone Pass is the worst graded road in England, the Devil's Beef Tub Pass is the best graded road over any British or Scottish pass. The wind blew helpfully up the hill, as it did up Kirkstone, and the competitors sailed up and cruised down the other side in comfort.

IMPRESSIONS ON THE LAST HILL

Viewing the climbs as a whole, it was remarkable that most of the sidecars came up very much faster than the preceding solo mounts, probably a matter of gear ratios, and, since there was no question of anyone failing, it was rather a matter of judging the performances from the point of view of noise and sweet running.

The Metro-Tylers climbed with a very nice hum, as also did the solo-ridden four-cylinder Henderson. Some of the machines were somewhat noisy.

E. Seymans (5 Zenith) was very silent, and the easy beat of the Blackburne engines could be recognised from afar. F. E. Salter (23 Zenith) was admiring the view, as also was Newman (34 Sunbeam). The Brough machines had a very pleasant hum, while A. Candler (3½ Rover), who

AT MOFFAT. V. Gayford (4-5 Zenith), L. T. Gibson (5-6 Zenith), and E. M. P. Boileau (33 Scott) checking.

was apparently late, was gamely plugging on. J. E. Sharp (4½ Humber) and E. J. Redvers-Johnson (4½ Humber) were both remarkably silent, as was also Alan Hill (Lea-Francis). The beat of B. F. C-Fellowes's old 2³/₄ De Dion engine reminded one of other days, but he was still going strong. F. W. Applebee (24 Levis) was strong. F. W. Applebee (24 Levis) was the first competitor to pass us on low gear, R. S. Whiting (2½ Carfield Villiers) was fast. H. Karslake and V. Chidley (5 Brough) both had power to burn. Lt. Kidston (3½ N.U.T.) made a silent ascent, and R. A. Bonner (2½ Douglas) and J. Watson (4 Harley-Davidson) ascended at watson (* Harley-Davidson) accented a speed. J. O. Barclay (Reading Standard) seemed very highly geared, but was ticking over with an easy throb. Wills (23) Verus) made a fast climb.

The End of the Run.

Beyond the Crook Inn and past Romanno Bridge there was some bad surface and greasy mud, but the re-mainder of the roads were good. Liberton was fixed as the end of the trial, as there was a procession through Edinburgh, which would have caused serious congestion. After the finish the competitors proceeded at leisure to the Waverley Market, a huge building where the Scottish car show is held. According to official figures, the analysis of the run is as follows (subject to confirmation at the next committee meeting on Friday, when the awards will be available):

Entries. Started, Finished. ... 121 Motor cycles ... 161 ... 147 Sidecars ... 150 ... 135 101 Cars 65 55 44

ars 65 ... 55 ... 44
The performances of the car entrants are given in our parent journal The Autocar.

All credit is due to the voluntary workers, H. G. Bell and his co-organiser, W. H. Wells, the brothers Baddeley, and E. Bridgman, the travelling marshals, and the host of others, but a special word of praise must be reserved for the veteran timekeeper, F. T. Bidlake. His is not a voluntary task, but the meticulous care he shows by his wonderfully tabulated time sheets, and the long and conscientious work he puts into the task of working

out results is only fully understood and appreciated by those who serve on the M.C.C. committee.

The Results.

The fact that out of 316 motor bicycle and sidecar outfits 222 finished by n means indicates that all the drivers these will receive gold medals. In fact the number of awards of any kind may be quite small, as, at the time of goin to press, neither all the checking sheet nor the Kirkstone Pass results have bee verified.

FIRST POST-WAR RECORDS.

D. R. O'Donovan with a 31 h.p. Norton Sidecar beats Fourteen Records.

N Thursday of last week, in perfeet weather conditions, D. R.
O'Donovau, with a 3½ h.p. T.T.
ain-driven Norton and sidecar, sucain-driven Norton and sucent, suceded in lowering several long distance cords in the 500 c.c., 750 c.c., and 000 c.c. classes. He covered 53 miles 7 yards in the hour, and for all the w-records, his speed was round about his figure. The time for the fitty-mile is figure. The time for the fifty-mile cord is lowered to 56m. 32\frac{1}{5}\s.\$, as against is record set up in 1913 by H. C. Newian (Ivy), 57m. 9\frac{2}{5}\s.\$, while O'Donovan's ced for the three hours was 50.92 p.h., as compared with H. Riddell's fenith-Precision) record, which we cured at a speed of 43.51 m.p.h. It will be seen that O'Donovan's orton practically maintained its speed roughout three hours, while the six cords broken varied from 52.48 m.p.h. 43.51 m.p.h. The successful Norton

43.31 m.p.h. The successful Norton

was fitted with a Canoelet sidecar, Mr. A. V. Ebblewhite, the official timekeeper, reports that with the exception of replenishing, the machine was untouched during the ride, and on dismantling for measuring the cylinder, juston, and valves were clean and free of burnt carbon. Dunlop tyres, Binks carburctter, Pratt's spirit, and Speedwell oil were used.

The following are details of new and old récords:

CYCLE CARS AT BROOKLANDS.

High Speeds at the B.A.R.C. Whitsun Meet.

OTOR cycle racing at Brooklands is not now run in conjunction with car racing. However, there were to events of interest to motor cyclists the Whit-Monday programme of the A.R.C., the first being the cycle car ort handicap, and the second the light r long handicap. In the former there are seven starters, the machines being N. A.V., and Calthorpe four-wheelers M., A.V., and Calthorpe four-wheerers d Morgan three-wheelers. First and ird places were taken by the G.N. ivers, A. Frazer Nash and H. R. idrey respectively. E. B. Ware on Morgan was second. The winner's and the five and threequarter mile urse was 72 m.p.h. In the second ent, over a distance of eight and a half lies, E. B. Ware (8 Morgan), with 1m. s. start, beat G. Bedford (10 Hillman), s speed being 66.25 m.p.h. The speed of 72 m.p.h. obtained by the

N. over a distance exceeding five miles remarkably good, and is sufficient indition of the efficiency of air cooling even hen the engine is run at full load for an

preciable time.

A NEAT RACING MORGAN.

E. B. Ware, (Morgan-Jap), winner of the first Light Car Long Handicap at Brooklands on Monday.

FOURIST TROPHY NOTES

I.R.H. PRINCE ALBERT, patron of the A.C.U., has been invited to the Isle of Man for the T.T. races His Excellency Lieut.-Governor Maj.-en. Fry, C.B., C.V.O.

Latest Details regarding Practising.

Practising starts on Monday morning it, at 4.30, and will be continued up 6.30 a.m. Every T.T. machine and ery reserve mount must have its racing mbers affixed to it. These machines ill not be allowed on the road after a.m. No competitor will be allowed to iss the Quarter Bridge later than 15 a.m., and this only if the rider is aying at some place along the course between Douglas and Kirk Michael. The course must be clear by seven o'clock.

Every rider must complete at least six circuits of the course, one of which must not exceed sixty minutes in the senior class, seventy minutes for the 350 c.c., and ninety minutes for the 250 c.c. machines.

Welsh Inter-club Hillclimb.

The results of the hill-climb organised The results of the hill-climb organised by the leading South Wales clubs, which took place on Whit-Monday, were as icllow: Class 2, expert, L. Thomas (Eagle); general, J. James (Chater-Lea). Class 3, expert, W. Edwards (23 Verus); general, J. Edwards -(23 Verus). Class 4, expert, A. Lindsay (3½ Norton);

general, W. Leystun (31 Norton). Classes 5 and 6, A. L. Cranch (Rover). Class 7, sidecars, J. Thomas (3½ Norton sc.). Class 8, unlimited sidecars, J. Thomas (3½ Norton sc.). Fastest time of the day, A. Lindsay (32 Norton).

Cork and District M.C.C.

The annual open trial organised by the Cork and District M.C.C. took place on the 17th inst. over an interesting course, embracing most of the test hills in Co. Cork and Kerry. Thirty-three competitors started from Cross Garage at 7 a.m., and ten failed to finish.

Previously this was a twenty hours' trial, but this year it was confined to daylight, the distance being 200 miles.

Coventry and Warwickshire M.C.

It was decided at a meeting held on the 18th inst. that the club should become affiliated to the R.A.C. and A.C.U. for 1921.

Wolverhampton M.C.C.

Trade riders will be handicapped in the reliability trial for the Cooke silver cup on June 5th. The course, which will be sixty miles in length, includes the wellknown Farlow and Flagstaff Hills,

Mansfield and District M.C.C.

A general meeting, to decide what form the Lucas silver cap competition shall take, will be held at the Mason's Arms, Leeming Street, on the 51st inst., at 8 p.m. Mr. R. Lucas, the donor, will ride in the T.T. this year.

Ilford M.C.C.

This new club has recently been formed with headquarters at the Cranbrook Motor and Engineering Works, Ltd., Barkingdon. The hon. sec. is Mr. F. C. E. Thompson, and all communications should be sent to him at the above

Westmorland M.C.C.

Over twenty members competed in the trial for the Lonsdale cup on the 9th inst. The course which was 110 miles in length was very difficult, and only dozen riders finished. Results: 1, B. Hill (3\(^2\) Scott); 2, P. Hoggarth (4 Triumph); 5, G. Jeffreys (3\(^2\) Norton). The Baker cup was won by A. E. Huddlestone (4 Douglas sc.).

Taunton M.C.C.

An inter-club hill-climb was held on the 15th inst. at Buncombe Hill in conthe 16th inst. at Buncombe Hill in conjunction with the Bridgwater M.C.C. The course was half a mile long, with a gradient of about 1 in 8. The results were as follow: 275 c.c.—P. Hare (2½ James), 350 c.c.—C. R. Roper (2½ Dongias), 600 c.c.—S. Goodman (4 Douglas), 1,000 c.c.—C. A. Pollard (5-6 Zenith), 600 c.c. (Sidecars),—S. Goodman (4 Douglas sc.), 1,000 c.c. (Sidecars),—S. Goodman (4 Douglas sc.), Goodman (4 Douglas sc.). .

North Derbyshire M.C.C.

Recently this club held a successful hillclimb at Stone Edge, near Chesterfield, climb at Stone Edge, near Chrosenbard, sixty competitors entering the various classes. Results: 600 c.c.—R. Carter (32 Martin). 350 c.c.—A. Wilson (23 A.J.S.). 350 c.c. (two-strokes).—A. Burgin (24 Martini, 550 c.c.—A. Wilson [22 A.J.S.], 550 c.c. (two-strokes).—A. Burgin [22 Velocette). 600 c.c. (Sidecars).—O. Smoothey (4 Triumph sc.). Unlimited.—S. Lawrence [32 Norton). Unlimited Sidecars.—G. Hoole [52 Norton sc.).

East Lancashire M.C.C.

An interesting sixteen mile course. covered three times before tea and then twice in the reverse direction, was that selected for the Jerrard cup trial. G. Trickett ran consistently throughout, but suffered from belt slip near the finish. The winner proved to be H. Walsh (33 Scott), cup and gold medal; while W. K. Stanworth (24 Connaght), C. Pilling (23 Douglas), G. Trickett (24 Clyno), and J. Hebden (24 Clyno) won bronze medals. selected for the Jerrard cup trial.

Newcastle-upon-Tyne M.C.

Several novel tests were put to members in the Surprise competition held on the 16th. These included starting up blindfolded and several other unusual features. H. Thompson (23 N.U.T.) was declared the winner.

Bolton M.C.C.

Out of forty-three starters in the recent trial held by this club only seven succeeded in negotiating the watersplash near Scorton. The 115 mile course lay over Rivington Pike and among the hills and moors of the Trough of Bowland.

Plymouth and District M.C. and L.C.C.

Grenofen Bridge Hill, steep and winding, with a bad surface, was the scene of the with a bad surface, was the scene of the hill-climb held recently by this club. The best performance on formula was made by W. Bowden (3½ Sunbeam sc.), while the fastest climbs were made by F. C. Bowden (7.9 Indian) solo class and E. F. Flint (8 Matchless sc.) sidecar class.

Gorseinon and District M.C.C.

This recently formed club will hold hill-climbing test on Saturday. Loca motor cyclists desirous of joining shoul get in touch with the hon. sec., Mr. S. Richards, Merton Cottage, Masons Road Gorseinon.

North Cheshire M.C.C.

The reliability trial for the Mathe Challenge Cup, to be held on June 6th is open to members only. Particulars membership may be obtained from th hon. sec., Mr. H. Broderick, Somerh Wilmslow.

Sutton M.C.C.

At a general meeting recently held a The Ridgway, Sutton, the followin officers were elected; President, M. W. A. Coe; hon. treasurer, Mr. I. Notley; and hon. secretary, Mr. L. 2 Hawkes, Bryn Menai, Cheam Roa Sutton

Luton and South Beds. A.C.

On Saturday this club will hold on saturday this citto will hold shill-climb at Kop Hill. Classes will t 350 c.c., 600 c.c., and unlimited sol also unlimited sidecar and car. Weiging in will take place at Wendow station at 2 p.m.

Liverpool M.C.

An Eliminating Trial will be held the 29th, in order to select a team represent the club in the forthcomit M.C.O. Inter-team Trial. The course wi be a twenty-mile circuit, to be cor pleted three times, starting and finishir at Northop.

Public Schools M.C.C.

Meeting at the Bear, Esher, on the 29th, a week-end "touch nothing" ru will be made to Brooklands, to view to racing, returning to Esher on the 30t inst. Members unable to get to the rendezvous by 1.30 p.m. will find the club at Brooklands until 5.30 p.m. c Saturday.

Hull M.C.C.

The results of the twelve hours reliability trial for the "Rudge Cup" we as follow: First, R. Fearnley [3] Rudge Multi); second, Taylor [2] Excelsion; third, Struthers (8 Matchless sc.).

On Sunday a run will be made to Yot starting at 9.30 a.m. Lunch at the Station Hotel, York, at 1.30 p.m.

Bournemouth and District M.C.C.

The results of the recent hill-clim held at Tarrant Rushton, near Blandford neu at farrant Rusation, near Blandion were as follow: 350 c.c., A. A. Pres wich (23 Diamond); 600 c.c., D. D. Col (4 Triumph); 750 c.c., R. H. Thick of James); 600 c.c., sidecars, R. Wheele (4 Douglas sc.); unlimited sidecars, (8 Forward (6 Sunbeam sc.).

N.M.C.F.U. (Leeds).

The results of the speed trials he The results of the speed trials he recently at Templenewton were as follow 300 c.c., L. H. Lightowler [23] Onega 600 c.c., R. Horsley [34] Norton); ulimited, C. Ripley (7-9 Indian); ulimiten novice, S. F. Ferth (4 Harley); 600 c. sidecars, W. Blackhonse, [35] Triams sc.); unlimited sidecars, T. Clark (7 Harley sc.); novice sidecar, J. H. Cavert (7-9 Indian sc.).

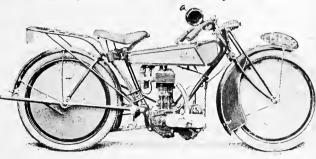

A Neat Rear Spring Frame Conversion.

A Device which Readily Replaces Detachable Rear Stays.

MODERNISING old pattern motor cycles has long been a speciality of Messrs. Olivos Motors, 120, Bollo Bridges Road, Acton, London, W. This firm has, however, recently concentrated its attention on a rear springing conversion for machines where the rear forks are pivoted at an extension of the engine bracket. The 3½ h.p. Triumph motor bicycle shown in the illustration is fitted with this device, and has recently undergone most strenuous road tests of long duration, which it has survived without the slightest fault.

out the slightest fault,
It will be observed that a five-leafed laminated spring is anchored by two U

An old pattern 3½ h.p. Triumph, converted by Messrs. Olivos Motors into a spring-framed model. Observe the large capacity tank.

bolts to the bottom of the saddle tube, and is attached to the rear forks on a bushed bearing. The lower fork is capable of movement about the bottom bracket bearing, which is provided with a phosphor bronze bush. The fork arms and the spring practically constitute an equilateral triangle, and when the spring is compressed it straightens. This construction gives a most satisfactory move-

ment. The carrier is also partially sprung, and movement is permitted at its uppermost attachment below the saddle.

A petrol tank of distinctly smart appearance has been fitted, the capacity of which exceeds three gallons. Although the underside appears to be dangerously near the sparking plug, a deep pocket is provided which enables the plug and valves to be removed with ease.

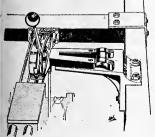

A Sporting Runabout.

The 10 h.p. Aerocar-a Racy Little Machine at the Price of a Sidecar Outlit.

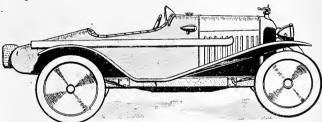

SERIOUS competition between the cycle car and the sidecar outfit is now an established fact. A large market for runabouts approximating in cost, power, and efficiency to the sidecar machine is assured. A sporting little car of this class, which has been under construction and experiment for a considerable time, has recently been placed on the market by the Aerocar Co., Pindock Mews, Maida Vale, London, W.9, at a figure representative of many passenger machines. In the design of the Aerocar reduction

In the design of the Aerocar reduction in weight has been a prominent factor. A sporting appearance, too, has been aimed at and attained—in fact, the little vehicle closely resembles a racing car in

miniature.

The gear change lever is located centrally.

A light lour-wheeler with motor cycle transmission to be sold at £210

À 10 h.p. water-cooled Blackburne V twin engine, having a bore and stroke of 85 mm. and 97 mm. respectively (1,096 c.c.), is fitted at the fore end of the ash constructed frame, and drives by enclosed chain to a countershaft mounted in ball bearings. Thence another short chain drives to a Burman three-speed and reverse gear box and a third chain to the rear axle. Thus, the disadvantage of long distances between sprocket centres is avoided.

Incorporated with the gear box unit there is a cone clutch and kick-starter, while the gear lever is located centrally.

while the gear lever is located centrally.

The rear axle runs on long Hyatt roller bearings, and also embodies two 8in. diameter internal expanding brakes operated independently by a pedal and hand lever.

Interchangeable cantilever springs are fitted at the four corners of the "chassis," and radius rods are provided to both axles. The front axle is tubular, with inclined steering heads, and car type worm and sector steering gear is used. Adequate cooling is ensured by a fan mounted behind the radiator.

The bodywork is neat and roomy, and

The bodywork is neat and roomy, and a neat finish is given by a polished aluminium bonnet and radiator. An aero type celluloid windscreen and a 5½in, x 1½in, oval section external exhaust pipe gave the little vehicle a most sporting appearance. The equipment includes a Capac carburetter, a four-gallon tank drip feed mounted on the dashboard. 650 x 65 mm. tyres, and polished aluminium discs. The dimensions are 7tt. wheelbase and 5tt. 8in. track.

THE MOTOR CYCLE" CHALLENGE CUP.

Presented in 1909 by the proprietors of The Motor Cycle after the original Motor Cycle cup had

Motor Cycle cup had been won outright in 1908.

At the present time the M.C.C. and the Coventry club each holds two sbares, that is to say, they have each won two trials, and only require to be successful this year to win it outright. The Derby, Nottingham, and Sheffield clubs have each won an event for this second

The Club Championship for 1920.

The M.C.C. Team Trial to be held in June.

By nominating a team for the M.C.C. Team Trials on Saturday, June 26th, every club in the United Kingdom has an equal chance of winning the Club Championship. Now that the clubs have reorganised after the war period, this classic event, which was inaugurated in 1904, should attract support from every club that aspires to national rather than local fame. Entries close on June 5th.

OW many clubs will enter teams in this year's M.C.C. Team Trial on fewer than forty-one clubs were represented, and in 1914 thirty-two. Now that the majority of the old and a number of the new clubs have a good following of keen riders, conditions were never so favourable for a record entry. It is one of the most keenly contested events of the year, and the team winning the trophy earns for its club recognition as the club champions for the year.

The challenge cup is a handsome trophy presented by the proprietors of *The Motor Cycle*, and is the second which has been presented to the M.C.C. for these team trials. The first was won

outright by the Coventry club in 1908, as the club had previously won the events of 1904 and 1907.

trophy, therefore hold one share each. The cup has to be won three times to become the property of a club.

Below we give in tabular form a brief history of the trials:

	No	of Tes	am	,
Date.	C	ompetic	ıg.	Champion Clubs.
1901		5		Coventry M.C.
1905		Tria	ls were	not held.
1906		5		Motor Cycling Club.
1907-		5		Coventry M.C.
1908		9	•	Coventry M.C.
1909		17		Motor Cycling Club,
1910		18		Coventry and Warwickshire M.C.
1011	٠.	20		Derhy and District M.C.C.
1912		25		Nottingham and District M.C.C.
1913		41		Sheffield and Hallamshire M.C.C.
1914				Motor Cycling Club.
1910		15		Coventry and Warwickshire M.C.

Undoubtedly a competition of this character has a strong appeal among club meu, and most clubs usually organise a private trial for their best riders in order to find a team the to represent them. Three solo and three passenger machines constitute a team, and, as a rule, the clubs send two or three reserve riders in case of mishap or disappointment before reaching the venue. The trial is held on a circular conversation. course, which is covered three times, and the team scoring the highest mileage non-stop is adjudged the winner, the mileage of each rider being added to make the total. Should mileage of each rider being added to make the total. Should more than one team make a non-stop run, then the award is made on the consistency of driving, judged by the repetition, as accurately as possible, for the second and third circuits, of the time taken for the first circuit. The entry fee is £3 3s., which should reach the organising secretary, Mr. B. Alan Hill, I, The Homesteads, St. James's Lane, Muswell Hill, N.10, before June 5th.

The Scottish Six Days Trial.

Review of Rules and Regulations concerning the Popular Scottish Event.

HERE are several innovations in this year's Scottish Six Days Trial, which starts from Perth on Monday, July 5th. The rules and regulations are now available, and reveal that a most sporting trial is being organised.

This year time will be given at the conclusion of the third day for changing tyres, and there will be special awards for single-gear performance. It may be remembered that in 1912 and 1913 G. Brough succeeded in winning a gold medal on a single-geared 6 h.p. Brough.

The following are the routes finally selected by the organisers, from which it will be seen that entirely new ground to southern riders is covered on the sixth day, while the noted hills of Applecross and Altnaharie are omitted, the competitors being taken to John-o'-Groat's. The last day's route starts from Edinburgh.

First Day, 1733 Miles.

Perth, Kenmore, Pitlochry, Kirkmichael, Braemar (lunch), Crathie, Tomintoul, Grantown, and Inverness. Test hills: Amulree, Cockbridge, and Bridge of Brown.

Second Day, 1861 Miles.

Inverness, Abriachan, Beauly, Dingwall, Lairg (lunch), Tongue, Melvich, Thurso, John-o'-Groat's, and Thurso. Test hill: Abriachan.

Third Day, 138 Miles.

Thurso, Latheron, Dunbeath, Brora, Lairg (lunch), Evanton, and Inverness.

Fourth Day, 180 Miles.

Inverness, Drumnadrochit, Invermoriston, Cluanie, Glenelg (lunch), Tomdoun, Invergarry, Glendoe, Craggie Inn, Carrbridge, and Grantown.
Test hills: Glendoe and Mam Rattachan.

Fifth Day, 160, Miles.

Grantown, Tomintoul, Braemar, Pitlochry (lunch), Aberfeldy, Kenmore, Crieff, Stirling, and Edinburgh. Test hill: Kenmore.

Sixth Day, 160 Miles.

Edinburgh, Broughton, Tweedsmuir, St. Mary's Loch, Innerleithen (lunch), Gifford, Carvald, Spott, Elmsclengh, St. Agnes, Haddington, and Edinburgh.

Test hills: Talla Linns, Redstone Rig, Elmscleugh.

The trial is open to (a) motor cycles; (b) cycle cars,
1,100 c.c., under 9 cwt. ready for the road; and (c) light cars (Junior Car Club definition as on May 22nd, 1920).

Entry Fees.

Entries, which close on June 14th, or with double fees on June 21st, should be sent to Mr. A. H. D. Aikman Smith, 6. Castle Terrace, Edinburgh, who will forward a copy of the regulations on application. The fees for manufacturers nominating a non-member of the club to ride, £10 15s, or £8 13s. when their rider is a member. Agents (non-members), £7 12s.; members, £6 11s. Private owners (non-members), £3 8s.; members, £2 8s. Trade members entering light cars, £6 11s.; private owner members, £3 8s.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," so, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a stamped addressed anyelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters gontribudge and should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

A Recurring Engine Trouble.

During the last year, I have had to have the crank pin of my 1915 Triumph re-riveted twice. It has worked loose again after running satisfactorily for three months. Will you advise me of the best method to get over this trouble?—F.F.

the crank pin was properly fixed with vets of suitable material, there is no ason why it should continually come ose. We would advise you to consult to makers repair department, as they ill no doubt be able to put matters that.

Clutch Adjustment.

In a B.S.A. 4½ h.p. 1919 model motor cycle the clutch descent of the paraffin oil, but no improvement was effected. I should be obliged if you would let me know how this could be cured.—T.S.

esumably the clutch operating rod beeen the pedal to the worm nut on the
ar box requires adjustment. This is
ected by tightening the right and leftnd sleeve nut, which you will find half
ya along the rod. There is also a small
justing screw on the centre worm nut,
d you might try the effect of screwing
is inwards one or more turns.

Two-stroke Back-firing.

I have a 2½ h.p. two-stroke two-speed machine, and I find that I can only get about 50 m.p.g. The carburetter is an Amac, and I have a 27 jet in it. Now I find that when I am riding petrol blows back out of the air ap on the carburetter, and the more I open the throttle the more petrol blows out of the air cap. I cannot account for this blowing back of petrol, out I fancy it is the cause of my prouble. I have got my engine timed correctly, and I have already tried a smaller jet, but find this does not stop he petrol from blowing out .- W.V.H. should advise you to remove the inder and examine the piston rings. the top one has gummed up in its ove, it should be freed. Improved ming and consumption might be. ming and consumption might be ained by fitting a slightly larger jet, No. 28, and considerably lowering larger through the buretter on a two-stroke engine is tally caused by a weak mixture or by y late ignition.

Newsagents' Delivery Work.

I shall be grateful for your advice. I am reced with having to do my own delivery. I should like to get some form of motor vehicle—something cheap within my means that I can get through a 3ft. doorway, having no room to store a large sidecar outfil. At the same time, I should like something in which I could take out 'my wife occasionally. We are both over fifty, so she would not like pillion riding. It has occurred to me that I could alter a box type carrier scooter so as to seat two, one behind the other. Another point to be considered for delivery work is frequent stopping and starting. I take it that the small scooter engines consume less petrol than the motor cycle and sidecar.—J.S.

A motor scooter would not be nearly so satisfactory for the purpose as a motor cycle and sidecar. We would suggest that you have a medium-powered (say, 3½ or 4 h.p.) motor cycle, and if the storage problem cannot be overcome you might have a folding sidecar chassis. You would probably find a motor cycle of this type almost as economical as a scooter, as the latter would be overloaded by your work and upkeep and replacement costs might be heavy in consequence.

Slipping Gear.

Will you kindly help me with my 1912 Roc two-speed gear. My trouble is with slipping of the high gear, and if I tighten adjusting nut to stop gear shipping I do not get any free engine, or if I am climbing hill on low gear the hub runs hot; then low gear the hub runs hot; then the high gear goes in on its own accord and I come to a stop. I have lined the high gear band with Ferodo, and find it answers much better on low, free, and high gears, but still slips a little on high gears, but still slips a little on high gears, the since heard that I should run the Ferodo (high gear) in oil bath, which I could manage. However, I would like your opinion as to whether oil will stop the slipping.—H.S.

The trouble may be due to wear on the faces of the wedge which expands the high gear expanding band. Although Ferodo is not seriously affected by oil, it should not be continuously lubricated. We feel sure that you will find the trouble lies in excessive wear of some detail in the high gear operating mechanism, such as the part above mentioned, or the push rod in the hollow axle. To effect cure it may be necessary to renew one or both of these parts.

The owner of this 4 h.p. Triumph finds his machine an admirable double-purpose mount It enables him to cover a big district, and widens the scope of his business considerably

Charging from Lighting Circuit.

I should be pleased to know if you could tell me how many lamps I should want in circuit to charge 4 volt accumulators from a 110 volt lighting plant. The switchboard voltmeter shows 110 volts and 15 ampères, and the charging rate of my accumulators is ½ to 3 ampère; maximum charging rate, 2 ampères.—E.L.

From your letter it is not quite clear what is the actual charging rate. We are assuming, however, that it is from a ½ to ¾ ampère, and that the discharging rate is 2 ampères. In order to charge at the ¼ ampère rate, you will require a resistance of one 16 c.p. carbon filament lame.

Scott Adjustments.

I should be much obliged for chain on my Scott (which has tretched tremendously, and is so slack that it will touch the flywheel with side play. The low gear chain is the right tension, and both chains are in alignment. Do you advise: (1) A link put into low gear chain is the right tension, and both chains are in alignment. Do you advise: (1) A link put into low gear chain and gear moved back to bring high and low gear chains to equal tension, or a link taken out of the high gear chain, or a new high gear chain? (2.) How does one drain old oil out of the Scott crank case, as I wish thoroughly to wash out with methylated spirit, but see no drain cock? (3.) When putting in new rubber and linen cylinder base rings and transport gauzes with Acreite packing, is it advisable first to smear them with any solution to make them "tacky" before screwing down the cylinder and port cover? If so, what do you recommend? (4) I think the radiator is slightly leaking, owing to water being left in one frosty night. Can this be easily repaired at a local garage, or is it necessary to send it back to the makers?—W.E.N.

(1.) A new chain should not be necessary after only 1,000 miles running. We have used one of these machines over 3,000 miles this winter without replacing any of the chains. It would be best to take a half link out of the high gear chain, although, if you do this, it may be necessary to move the gear slightly towards the engine, when the low gear chain will be somewhat slack. Provided the chains are in alignment the tension does not greatly matter. (2.) No provision is made for draining the crank case. If you wish to remove the oil you can either draw it out with a syringe or soak it up with a rag. We do not quite understand why you wish to wash the crank case with methylated wash the crank case with methylaces spirit. (3.) The rubber rings do not require any jointing material, but the linen cylinder base washer should be nnen cylinder base washer should be smeared with secotine. The Acreite jointing material used on the transfer port covers and crank case doors does not require any preparation; it will almost invariably make a tight joint by itself. You might, however, smear it with seccotine it you suspect air leaks.
(4.) If the leak is visible the local garage should be able to solder it up; but if it is a very slight one you might try the preparation known as "Waterite," which you can obtain from the makers.

Oversize Tyres.

In The Motor Cycle recently
I have several times seen the
subject of oversize tyres mentioned. I have a 4 h.p. 1918
countershaft Triumph, on which

countershaft Triumph, on which I fit 26x2in. heavy covers. Can you kindly oblige me with information as to what I could fit as oversize tyreswithout having to alter any part of the frame, etc.?—J.F.B.

The size of the tyres fitted to the 4 h.p. countershaft is 26 × 2½ in. If you require an oversize tyre for this rim, you will find that 26 × 2½ in. for 2½ in. rim is the correct size. We believe also that certain 28 × 3 in. tyres can be used on this machine, but we are not sure that any tyre manufacturers recommend the fitting of this size.

EXPERIENCES WANTED.

"J.C.J." (Fulham).—Any make of folding sidecar.

"A.D." (Altrincham).—Jet setting and m.p.g. obtained with Schebler carburetter on 1920 7-9 h.p. Indian, also jet sizes and m.p.g. with Binks on same machine.

READERS' REPLIES.

Levis Lubrication.

I have a 2½ h.p. Levis, which I run on petroil. There is no difference, except a certain amount of oil round the carburetter. Jet, Amac 28. I only use the machine to and from business, about five miles each way, and for this purpose the petroil system saves a lot of trouble.— R. N. Boyn.

Lack of Power.

I see amongst your readers' queries of May 13th that "W.A.C." cannot develop power on a Rudge Multi. I have just overcome the same-difficulty with a 3½ h.p. of the same make (and sidecar). I found that the exhaust valve tappet had worn a hole in the rocker ¼in. deep, causing the valve to open only a bare \(\frac{1}{6} \)in. instead of ¼in. or \(\frac{1}{6} \)in. lift. I replaced the rocker, which was soft, and also had to fit new piston rings, as they were badly worn through the exhaust not getting away. "W.A.C." will find it necessary to remove the magneto to get split pin out and nut off rocker stud at the back of timing case. My Rudge will now take myself and two passengers up almost anything.—T. L. Unsworth.

Important Notice.

Second-Hand Machines.

THE increasing demand for motor cycles and the shortage of supplies is a temptation to the unscrupulous to misrepresent the dates of second-hand machines, and sometimes these are advertised incorrectly.

The year of manufacture should be verified by reference to the makersthe engine number usually sufficing for this purpose.

Attention is also directed to our Deposit System, which is intended for the protection of our reader.

Not only "The No-Premium House"

BUT WE DO NOT CHARGE FOR DELIVERY

Read the following extracts from letter received last week-

16/5/20.

Dear Sir.

It is with great pleasure that I write to thank you for the way in which you have treated me, and only such a short period since placing my order, especially at a time when the majority of Agents. in and around---are wanting up to £31 10s. Premium on a $4\frac{1}{4}$ h.p. Combination.

You advertise as "The No Premium House," not only do you carry this into effect, but also you do not charge for delivery from makers, which is seldom omitted in other Agents' final receipts.

In conclusion, I must say that all of my future mounts will bear the transfer of "The No-Premium House," and may you increase until you are the biggest dealers in the U.K.

Wishing you the best of luck, .

Yours faithfully, H.T.H.

We have many similar to above that can be seen at

Caution in Driving.

NCE more we are constrained to ask readers to exercise every care in driving. So many newcomers are on the roads at the present time that it is well to avoid any possible chance of incidents which may cause the novice to "lose his head." Quite a large number of drivers have yet to know, by instinct, what to do in an emergency, and, until they have become more accustomed to their machines, motor cyclists will be well advised to keep a good look out. To those who only recently have acquired a motor cycle, we would say that over confidence at times reveals to the more experienced driver that egotism of which later one is ashamed. The novice—and all drivers are novices until they have been on the road at least a year or two-should avoid high speeds on the road. He should keep to the left side of the road, and, at all times, he should be able to stop within a few yards, especially on winding roads. He should not take any bends at a high speed until he is able accurately to judge the safety margin, as sometimes he may find that he cannot hold his machine on the left side of the road and, consequently, swerves to the right side.

Judgment and Experience.

Motor cyclists are no more to blame in this respect than owners of cars; in fact, the latter are often the greater culprits. Particular care is necessary when driving in traffic, and considerable judgment is necessary when passing a vehicle from behind. This judgment can only be obtained from experience, and young riders should remember that it is generally accepted that, when overtaking an obstruction, anyone coming in the opposite direction has the right of way.

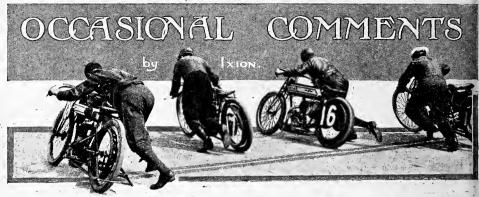

The rider who "blinds" past everything on the road is usually a novice, and, curiously enough, seldom makes a good average.

It must also be remembered that, after a fast run in the country, one's speed in traffic is apt to appear slower than is actually the case. If every motor cyclist and car owner—expert and novice alike—would exercise discretion and consideration and so avoid any suggestion of recklessness, the whole community would benefit, and motorists would cease to be looked upon with suspicion by public and police.

The Virtue of Appearance.

HE engineer who concentrates entirely upon mechanical efficiency, is sometimes apt to overlook the importance of appearance. This and the question of quality are perhaps more important from a sales point of view than the engineering ideals, which are sometimes not appreciated by the public. If a list of the most popular machines is made, it will be found that in almost every case appearance and quality are the outstanding features. The latter, of course, includes finish.

With so much new blood in the designing field, we are induced to draw attention to these points, and urge designers of unorthodox machines to pay greater attention to superficial appearance, for, in the enthusiasm created by a new design, those responsible overlook the fact that familiarity may appear to make even the most ugly machine look pleasing. does not necessarily mean that it is essential to follow conventional lines in order to make a good looking machine. The unconventional good looking machine. machine may be good, bad, or-indifferent in appearance, but generally there is no valid reason why it should not be pleasing to the eye. If the designer will recall all the unconventional machines produced during the past decade, he will know that several of these, following quite unorthodox lines in their mechanical features, attract rather than repel the prospective purchaser. On the other hand, motor cycles embodying accepted practice at every mechanical point, for the want of a little thought, are made to appear heterodox. . . .

A Boom in Baby Two-strokes.

OGETHER with a pal or two I have just spent a full week on the road, and we marvelled much to see that apparently two machines out of every three were baby two-strokes. This applied not only to elderly potterers, nor yet to utility riders pursuing their business ends near towns, but equally to youthful joyriders out on the long trails. We discussed the possible explanations o' nights, not without heat. The Leander man opined that a debased breed of youngsters is arising in the land, whose idea of fierce joy attains no higher level than that of ambling along on a slow and handy mount. The man with a scarred face and one arm had no doubt that the riders in question were Conchies. The economist pointed out that wages are rising and that the young artisan bachelor can afford to spend £70 on a hobby, though f_{150} may be beyond his reach. The trade rider remarked that deliveries of the heftier machines are still rather behindhand. Uncle reminded us that he began on a 150 lb. machine, and sometimes feels he would go back to one if anything at so low a weight were procurable nowadays; there are, he fancies, more novices abroad than ever before, and they will acquire the 7-9 h.p. taste in due course. Well, Asquith is back in Parliament, and we'll wait and see!

Necessary Spares.

VER since the man who ate the first oyster yielded the palm for valour to the man who first rode a bicycle which contained a gallon of highly inflammable spirit, the means to ignite it, and the ultimate certainty of a heavy fall, we motor cyclists have been advised in cold print never to leave home without carrying certain spares. The list-as usually given-includes a plug, a valve, some copper wire, and a few nuts. As my locks have grown silvery at the game, may I be permitted to offer younger and greener brethren a revised version of this ancient tale? You should, but need not, carry a plug; after all, plugs are cleanable, and, anyhow, somebody will presently come along and give you one. It is an insult to Sheffield to carry a valve; I have not broken one since my first grandchild was born, and I never own (or, at least, buy) a valve. Why carry copper

wire when you can buy wire if needed in a town, to pinch it off a fence if needed in the country? Why carry spare nuts? There are 100 different sizes of the machine; you cannot carry a spare of each, unless you keep a trailer for the purpose, and if a nut drop off you can generally borrow its fellow temporarily from some other gadget on the bus. But there are two things you must carry if you wish to finish your journey with certainty. One is whatever transmission spare will ensure you against a bad fracture of your driv (this may imply a spare belt with two extra fasteners or at least a baker's dozen of chain bits). The other is absolute insurance against a tyre hang-up; translated into invoice style, this means a spare tube and a fin. gaiter.

Clean Trousers.

PARAGRAPH about leg-wear has brought me a good deal of correspondence. My emphasiwas upon the tendency of the ordinary leg overalls to get dirty on the inside when drawn off over a soiled boot, so that in time the overalls spoil your trousers. The John Bull people make an overall which is free from this vice. The Brooks spring legging is equally efficient, but a user finds that it is inclined to slip down, and has extended his pair with thigh pieces, so that they can be held up by a belt. The College mudshield people make an ingenious gaiter, which is of the smartish shaped-to-the-calf-variety, and has extensible fasteners, so that it can be worn over stockings or trousers indifferently. I did not mean to imply that nobody had solved the problem in question, but rather to point out that 99% of us wear leg overalls which soil our trousers at every wearing after the first.

If it had been Chains?

LL the world knows that chain spares are rather hard to come by in these days, and the machine I ride asks for a size which does not dwell in small cycle agents' showcases. I know cynics who say that if a back chain goes, it thrashes all the spokes of your wheel, and that if a front chain goes, it kinks your crankshaft, so that in either case chain spares are equally useless. This statement is one of those half truths which are more pernicious than any lie. It is true that a bad chain smash often does some-

BLOCKING THE ROUTE,

Consideration for competitors is often lacking on the part of spectators at sporting events. This picture was taken at the top of Kirkstone Pass, where the road was almost completely blocked by cars and motor cycles. The difficulties of the London-Edinburgh ridders were increased by the rain and dense mountain mist.

thing else. It is also true that at least 50% of the chain breakage troubles are curable by the road-side if you carry about 1 lb. of spares. It is also true that if you have not got the necessary bits in your bag, it is probably useless to wire to the maker for them, hopeless to borrow them locally, and heart-breaking to search the county for a dealer who has them. Belts, I must admit, are easier to come by, but a belt is light to carry, and a surprising lot of places are ten miles from anywhere.

A Portable Hand-cleaner.

ECENTLY I- had quite an ordinary puncture, and mended it quite satisfactorily in ten minutes or so. Though the roads were bone dry, I was in a pretty mess at the end of the job. I had been seated perforce on the dusty road during my wrestle with the back tyre, and my trousers and shirt had suffered-I had wisdom enough to remove my reefer coat and tweed jacket before starting work. Furthermore, my hands were simply filthy, thanks to the dust on the wheel, and the oily carbon spat out in that neighbourhood from the exhaust delivery pipe. I was rather tidily dressed for me, as I was going to see some people with whom I am not on slop suit terms, and my efforts to get a wash were quite amusing. I first tried-at a "pub," but it was out of hours, and they thought I wanted an illegitimate drink, so no-body came to the door. My next effort was at a cottage, but the matronly person who opened the door thought I was mad or drunk, and hastily slammed the door again. Finally, I made shift in a brook with the aid of a pocket handkerchief. Meanwhile, of course, I had dirtied my handle-bar, gear lever, and oil pump very successfully. I wonder nobody has ever marketed a small canister of dilute liquid soap, to be carried on the road, and replenished at home from a gallon can. I must fake up something when I am through my present tin of Flash. Some modern machines are fairly clean to ride, provided no trouble occurs; hence one feels rather disgusted if a puncture reduces one to the semblance of a chimney sweep.

But you should have seen Robinson on his last ride with me. I had the legs of him, so he got plenty of dust. He also had two punctures, so his hards, clothing, and levers gradually grew very foul. Moreover, he was as "pluff as a wilkie," as they say down west (Angliee, as flabby as a toad), and sweating niddling heavy over the tyre repairs, he had been mopping his heated brow in replacing a stiff cover. Tipping is not the only cause for our unpopularity at first-class hotels. I usually carry rag inside my head lamp, and if I could snuggle a small tin of Ethol and water into some odd corner, I might even turn up smiling after mending a chain.

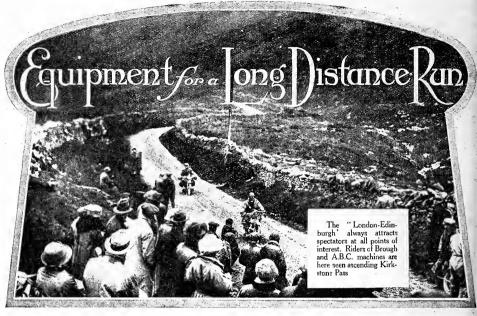

Waterproof Sparking Plugs.

FIND that many new riders, employing the motor cycle for business purposes, are still ignorant that there are waterproof plugs on the market. Many of us are frequently compelled to leave our machines in the open for periods long enough to drench the plugs if rain happens to be falling. It may be outside a business house, outside a friend's door, or outside a teashop on tour, or on the side of a freak hill when we are watching a big trial. To get a start with the plugs externally sopping is less easy than it looks, a little overhead cover being generally desirable to dry the parts out properly. It is, of course, quite easy to waterproof a plug with the aid of faked oddments, such as a small tin punched to thread over the terminal stud and to act as an umbrella for the insulator. But the professional article is almost always better than the amateur's improvisation, and there are now several first-class waterproof plugs on the market. They should receive the preference from all riders who expect to leave their machines uncovered in the rain. Whilst I am on this point, may I point out that a hinged saddle which could quickly be turned upside down under the conditions indicated would be quite popular. A wet saddle is only tolerable if one is wearing seated waterproof overalls.

TWENTY-ONE YEARS OLD—STILL GOING STRONG.

This machine, which is over a score years old has its original steel bushes. Its owner, B. F. C. Fellowes, made a good climb as far as "The Struggle" on Kirkstone in the London-Edinburgh run, and after a lew minutes rest finished the hill successfully. The tank bears the motto, "Ne Fronti Crede."

Notes on Some of the Machines in the London-Edinburgh Trial.

UITE a large number of people congregate at the start of the London-Edinburgh run in order to inspect the machines and note the "gadgets" details of equipment used by the riders tor their long journey.

In many cases one could see that the machines were new and little used 1920 models just fresh from the showrooms, and fitted out with almost every conceivable item of equipment; but, as in nearly able item of equipment; but, as in nearly every big trial, there were present a number of machines which have been through a good deal of use and which were equally interesting.

One of the items of interest to all and and and the state of the present of the pr

sundry at the start was the new Delta

Instrument board and windscreen of the Delta sidecar.

sidecar fitted to a 1920 four-cylinder Henderson, the special feature of the outfit being the torpedo-shaped body slung on long cantilever springs from the sidecar chassis. The body is cylindrical in shape and reminiscent of the Zeppelin, while the passenger is seated on a large cushion on the floor, with ample padding and upholstery at the sides to provide comfort. An instrument board with clock, switches, illumination light, mirror, map cupboard, and an Avro adjustable windscreen were fitted. In the tail is a large locker for various sundries, and luggage can be accommodated on a very neat aluminium carrier situated at the extreme rear of the chassis.

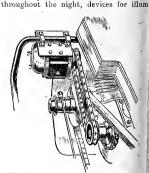

This sidecar is finished off with nickelplated bands and nose caps on the body, and the equipment is completed by a polished disc to the sidecar wheel and an electric head light and horn.

Electricity as a Stand-by.

One of the competitors possessed a big Zenith combination equipped with a C.A.V. light car dynamo lighting outfit. The dynamo was clamped to the forward and upper sidecar connecting tube by two brackets and a large steel plate, the drive being taken through a Whittle belt extending from a special pulley mounted on the engine crankshaft. The accumulators were carried in a compartment under the seat of the sidecar, a switchboard being located in a protected position inside the forepart of the sidecar body. installation of the various cables between the dynamo, accumulators and switchboard were substantially carried out.

As a safeguard against sudden cuttin out of acetylene lighting, the Metro-Tyl-team had a small electric head and ta light fitted to each of the machines. emergency lighting system consisted of small head light mounted on a U shape spring bracket, which, in turn, was bolte to the upper part of the front fork while at the rear of the machine ther was a small electric tail light. Th miniature lighting system is not expensive to rig up for the purposes of a tria and should prove most useful in the event of a breakdown of the mai acetylene system.

As in previous trials which extende

The C.A.V. dynamo and Whittle belt drive on C. S. Lake's 8 h.p. Zenith.

Engloment for a Long Distance Run .--

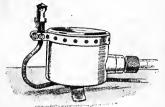

Rear view of the Delta sidecar, showing the neat luggage carrier.

nation of the various instruments on a machine, as well as route cards and maps, played an important part in general equipment. The rider of an Indian illuminated his speedometer by means of a miniature lamp such as is used on aeroplane instru-ment boards. It was secured by a length of Meccano strip, clamped around the speedometer.

An Unusual Speedometer Fixing.

Almost every machine carried its full complement of instruments and various accessories, which, in the majority of cases, were fitted up in a very neat manner. For example, the Verus two-stroke lightweight had the speedometer and watch located at the side of the tank on a cross-bar bolted to the tube under In this position these two the tank.

instruments were very easy to see when riding, and relieved the handle-bars of their weight,

Electric light for the speedometer rigged up with the aid of a strip of Meccano and two small bolts on W. Hallett's Indian.

OF THE EDINBURGH ECHOES RUN.

THOUGH sidecar passengers appeared to travel in much greater comfort than before, many owners had not cultivated the art of travelling light, and not cultivated the art of travelling light, and "excess luggage" was very noticeable. One enthusiast, S. Marshall, set out ma 14 h.p. Dunlop scooter. He did not arrive at Edinburgh.
Another enthusiast, T. Fawcett, having

had trouble with his machine on the way to London, bought a new Invicta-Jap in

a small town en route, and, arriving late, was allowed to start after the cars. He completed the journey.

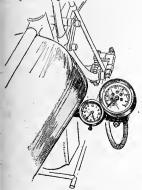

E. C. Lunnis (8 Sunbeam sc.) broke chain near Doncaster.

Chassis Weakness.

Broken sidecar chassis were numerous than one expects on a 400-mile run. D. H. Noble (10 Reading Standard) bandoned his attachment near Don-aster; E. H. Newman (4 Government nodel Sunbeam) also had trouble in this espect.

Robertson-Brown (10 Henderson) and 3. P. Stuart Clarke (7 F.N.) both suffered from bad petrol bought on the oad, which left a resinous deposit.

Tyre troubles there were in abundance. Geoffrey Hill (33 Scott) had his clean

The speedometer and watch mounted on cross-bar at the side of the tank of a Verus two-stroke, ridden by S. Dunford.

sheet spoilt by punctures at Penicuik. Crostwaite (5.6 James sc.) and L. G. Pulzer (8 Clyno-Jap sc.) were among the others who also experienced similar

J. W. Wills (23 Verus) started with his clutch out of action, but succeeded

in reaching Edinburgh.

When passing through one town on the Great North Road, on quite 60% of the machines the rear lamps were out. A reader who discussed the matter with a sporting policeman probably saved "official" action by interesting the officer

in the run.

Mr. G. T. Jefferson, of 130, Anlaby Road, Hull, lost an attaché case containing a quantity of Triumph spare parts and personal items in a separate case

between Baldock and Biggleswade. A Thornton-Pickard quarter-plate folding camera was lost by another competi-tor between Ilkley and Patterdale. The owner is Mr. F. Wolstenholme, M.U. Insurance Co., Ltd., East Parade, Leeds.

A Sporting Effort.

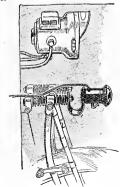

The performance of B. F. C. Fellowes, of Nottingham, was noteworthy. A good deal of interest was evinced in his "built-up" machine. The engine was a twenty-one year old 2\hat{2} h.p. De Dion, in which were the original steel bushes. It had a detachable cylinder head and an automatic inlet valve. The carburetter was an old type B. and B., and the magneto a Simms. The drop-backed frame was of modern type, and, fitted with T.T. bars and painted a bright yellow, picked out in black, the machine looked very attractive. Rigid forks were fitted and a three-speed gear in the back hub. Such a veteran machine could hardly be expected to make a clean ascent of Kirkstone Pass. The bottom gear was 8 to 1, and although Fellowes konked out twice on the way up the Pass, he managed to restart each time with the aid of a little assistance. Fellowes made the run from Nottingham to London, and London to Edinburgh without incident. Return-ing to Nottingham, however, he had the misfortune to break his front down tube of the frame.

Our readers possibly do not realise the amount of work and the organisation involved in providing a report and photo-graphs of the trial. As in the case of

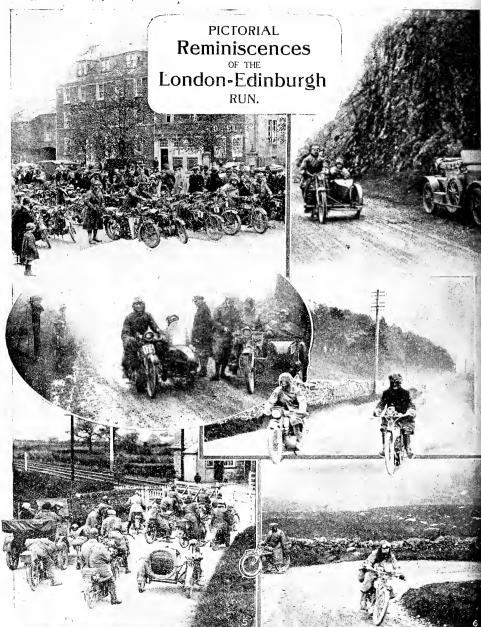

Porlock in the London-Land's End Trial at Easter, members of the motor cycle staff observed every performance on Kirkstone Pass and the non-stop section in Scotland, and on both these places, in addition to the start, our photographers were stationed. Another photographer accompanied the competitors from Doncaster to Patterdale, and one member of the staff competed on a solo machine, in order to see the trial from a competitor's point of view.

The Late Mr. J. D. N. Dickson Hill.

It is with great regret that we have to announce the death of J. D. N. Dickson Hill (5-6 Zenith) at Ponton. After leaving the first breakfast stop, he made a good ascent of Gonerby Hill. but unfortunately was travelling too fast to take a corner properly, and crashed into a wall. He was unconscious when picked up, and was eventually conveyed to Grantham Hospital, where he passed It would seem that his accident away. was chiefly caused by inexperience and want of care, but it is sad, indeed, to think that the motor cycle pastime has been robbed of so enthusiastic a young sportsman. Mr. Hill was learning motor engineering at the Blériot Works, Addlestone.

Emergency electric head lights on one of the Metro-Tyler machines.

(1) Early arrivals at Moffat. (2) An 8 h.p. Matchless and sidecar at the top of the Devil's Beef Tub. (3) A. L. Huggins (8 Zenith) passee G. S. Wright (8-10 Henderson) on Kirkstone. (4) Father and son near Skipton—F. W. Applebee (21 Levis) and F. A. Applebee (Indian Scout). (5) Competitors keld up at the crossing near Kendal. (6) In the Land of Mists and Mountains.

POSSIBLY those who compete in a big open reliability trial have a vague idea that there must be a certain amount of work attached to unning the event, judging by the number of arrows in the route, or from similar deductions. Those notor cyclists who are unconnected with a motor cycle lub, however, have little idea of the enormous amount if work entailed by such a trial as the Victory Cup competition, run off by the Birmingham M.C.C. a veek or so age, though they may have derived a certain amount of pleasure and information through eeing the competitors pass a certain spot.

The first task of a club committee, having decided o hold an open reliability trial, is to draft out the ules for the event. The majority of the big clubs olding big trials have had previous experience of his, and, therefore, the task is not particularly diffiult, unless some new form of test is to be tried, then care must be taken to provide no loop hole to likow any competitor to get through without either assing the test or losing marks.

The Route.

Having drawn up the rules, the route must now e selected; possibly an old course will be chosen, is slight modifications may be made, or an entirely ew course mapped out. In the latter event, it means lat some enthusiastic committeemen must go over it ground and make out a report for consideration the whole committee before any of it can safely included in the trial.

Distances must be carefully checked, suitable checking points must be noted, and roads which would be dangerous, or cause confusion in the trial, must be excluded.

Prizes must be found and allocated to certain classes, officials appointed, and all details of the event laid down. Then the rules can be sent out to all likely competitors, and a copy sent to the A.C.U. with a request for a permit. These rules, it should be noted, are only supplementary to the A.C.U. open competition rules, which run to several pages.

A keen secretary will send out entry forms and regulations to every firm in the trade, to every motor cyclist who has ever before entered in one of the club's competitions, and to everyone who has ever entered in any other club's competition. This may mean the addressing and despatching of anything up to 500 entry forms.

Large Number of Officials Necessary.

Whilst the entries are coming in, arrangements are being made for the dozens of observers, checkers, and other officials who are required if the trial is to be a success. In the Victory Cup Trial there were no fewer than seventy officials in addition to the ordinary officers of the club.

Then, when the entries begin to arrive in numbers, each one must be tabulated to show which class the machine entered will go into, whether the entry fee is correctly paid, whether the entrant possesses an A.C.U. driving licence, and so on.

Organising a Big Trial.-

Route cards must now be prepared, together with observers' sheets, time-checking sheets, competitors' observation cards, or report cards, instructions to checkers, marshals, etc.: "official" badges must be ordered, arrangements must be made for petrol and oil at the starting point, for competitors' lunch, and for their tea. Police en route, and sometimes road surveyors too, must be advised of the trial, and a hundred and one other similar matters attended to.

When the Day Arrives.

On the day of the trial, if every official is in his place, things go smoothly and easily. At the starting point, competitors have their watches sealed—that is if the Birmingham Club's system is used—in order that they may go by their own time all through the trial, number cards are fixed, and machines scrutinised to see that they comply with regulations; then comes the start. In the Victory Trial, the first man got away at 9 a.m., whilst the last man did not start till nearly three hours later, there being a minute interval between each competitor to prevent "bunching" on hills.

When the trial is over, the arrows, which are put up all along the route the day before the trial, are sometimes collected again, as printing is a heavy item in these days, and, on a 140 mile course, 100 big card-

board arrows do not go very far.

Competitors sign in as well as being timed in, and must hand in their report cards containing information regarding their own or other competitors' stops. Failure to report is a very scrious offence.

Checking sheets from officials stationed at various parts of the course dribble in for days;

then the real work commences.

Probably the simplest and best plan to

the names, numbers, and all information regarding each competitor, and against the names entered the remarks taken from the observers' and checkers' report sheets.

Working out the Results.

In working out the Victory trial, there were ten sets of checking sheets, each containing the notes of at least four observers, so with 170 competitors there were 10 × 4 × 170=6,800 figures to call out and enter before the more serious business of working out the formula results in an acceleration test takes place. The Motor Cycle formula involves quite a nice little

sum for each of the 170 competitors.

When all figures are entered and checked, the winning names can be sorted out. But even now the officials' task is not completed, pressmen are at the door awaiting results, which in a few cases must be posted to the less enterprising papers. Various queries are raised by disappointed competitors, as to why they did not have gold instead of silver medals, and so forth, the inevitable crop of rumours has to be endured, and finally, when all accounts in connection with the trial have been squared, there remains nothing but the engraving of the prizes, medals, etc.

Competitors who wonder why results cannot be published the same day as the trial, or even a couple of days after, will perhaps now understand the reason, and those who grumble because an arrow is missing, or not easy to see, will remember there are "heaps and heaps" of work to do in connection with a big

trial, besides just fixing arrows;

The hon, secretary of any club which runs an open trial is a very hard-worked man, and to him every competitor and official owes a debt-of gratitude.

VERNON BROOK.

COULSON INNOVATIONS.

Direct-acting Leaf-spring Forks. Detail Improvements in Brake Work and Finish.

NEW design front fork is now fitted to Coulson B, motor cycles. The movable portions of the fork bearing as front wheel spindle slide in bronze

ashes contained in the front members of the forks, which are packed with grease, while at the point where the front members coil check springs are inserted. These two members are suitably bridged, and are means of liftks to short leaf springs anchored to the fork crown. A fork of this design was fitted to a machine entered in the London-Exeter run at Easter, and was briefly described by us on that occasion. Three types of

Three types of carhuretters — the Capac (an old favourite with this firm), the single-lever Amac, or the new Silex

or the new Silex or the new Silex The latter is a carretter manufactured by Messrs. Jones d Marchant, of Weybridge, which was scribed in our issue for April 15th.

The latest type of Coulson spring fork.

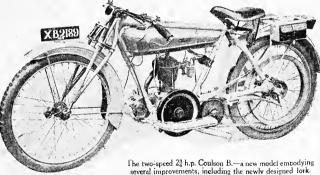

A slight modification has also been roduced into the rear brakes, the erating rod passing through the spindle which one end of the band is auchored magneto guard of ample dimensions

has also been added, and improvements have been made in the finish of the machines.

A new model 23 h.p. Coulson B. has recently been placed on the market incorporating many of the principal improvements we have just reviewed. It is a most attractive machine, finished in French grey and blue. The distinctive Coulson streamline tank is retained, and th. new fork, Capac carburetter, and a Sturmey-Archer two-speed countershaft gear are inco-porated, the gear box being mounted on an aluminium plate on the bottom bracket.

A particularly attractive feature is the handle-bar, which is in one with the head clip. It is perhaps well to advise readers who are not familiar with Coulson B. motor cycles that they incorporate in this model an efficient spring frame, using quarter-elliptic leaf springs under the chain stavs.

AMERICAN ENGINES FOR THIS COUNTRY.

An overhead valved twin engine of American design that is shortly to be narketed in this country.

TWO American power units, new to British motor cyclists, will shortly appear in this country. Known as the Lake engines, there will be two sizes, a single of 570 c.c. and a V twin of 1,140 c.c., nominally rated at 5-6 h.p. and 12-15 h.p. respectively.

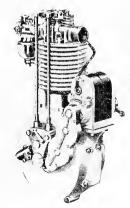

In both engines the same size cylinder is used, viz., 85.7 mm. bore and 99 mm. stroke, and detachable cylinder heads, overhead valves, and mechanical lubrication are their salient features.

The lubrication pump (which is attached to the outside of the crank case) has a controllable stroke, and forces the oil via the front cylinder to the moving parts of the engine.

Phosphor bronze bearings are used for the small ends of the connecting rods, roller bearings for the big ends, and ball bearings for the crankshaft.

Constructed of tubes, with steel tips, the valve push rods are said to be very light, while the rockers and gear wheels appear to be well designed.

The Lake engines are handled in this country by Messrs. Shillan, Beck and Co., Inc., 90, Cannon Street, E.C.2.

The Lake single cylinder with overhead valve mechanism. Its capacity is 570 c.c.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Heriford Street, Coventry, and must be accompanied by the writer's name and address.

SPEED WOBBLE.

Sir,-The letters upon speed wobble have been of much interest, as evidenced by the following, which is perfectly true. At a certain public school the proud possessor of a brand new Norton was asked if he ever had a speed wobble. His reply was no, but he could easily get one by paying extra.

Lichfield NORTON.

PETROL CONSUMPTION ON V TWINS.

Sir,-In your issne of May 20th, I certainly think that W. Arthur Long does not realise the petrol consumption

that can be obtained with an 8 h.p. Jap.

I have a 1919 New Imperial Jap and heavy Grindlay de luxe sidecar with hood, screen, and full equipment. My first carburetter just managed to get me 40 m.p.g., no matter what size jet I use; so now I have a single-lever Amac, and my last two-gallon tin has given me 134 miles, plus one inch of benzole now in my tank,

I have never driven my outfit without my passenger. Hornsey Rise, London, N.9. SAM WELLER.

SPEEDS. Sir,—In the issue for May 20th, your correspondent "A.G." states that he has attained the speed of 65 m.p.h. on an absolutely untuned 4 h.p. machine. If this remarkably fine machine were thoroughly tuned, he might put 10 or 12 m.p.h. on to this speed, then, if he cared to compete in the next speed trials, some of our better known speed "aces" would speed trials, some of our better known speed 'aces would have to look to their laurels. In comparison with the above, the performance of "L.R.'s" big 7-9 Indian, which can only do an equal speed, although carefully tuned, and on a picked trial insignificant! Rugeley.

COURTESY ON THE ROAD.

Sir,—The above topic has been discussed several times in your valued paper, and I think another worthy example would justify its inclusion. Coming home from Norwich a few nights ago I happened to have the misfortune to break a belt, losing one of the fasteners. After searching in vain for the missing fastener, another motor cyclist came along, and, without request, offered to tow me to a repair shop. In the course of conversation, I learned that he had just covered about 130 miles during the afternoon, doubtless rendering him less fit than when he started; but the fact, coupled with his kind offer and assistance, makes one wish that many more motor cyclists would take a lesson of the "good Samaritan." GORDON B. SMITHDALE.

THE SINGLE-GEARED MACHINE.

Sir,—I have recently noticed among your correspondents, great tendency to deplore the passing of the sporting single-speeder.

Many have sent in suggested designs of more or less merit, but I am sure all will regret the passing of the Martin motor cycle. I recently rode and owned a 2 h.p. single-speed: it was everything a rider could want—light, strong, handy and simple It could "twist the tails" of a great many Yankee omnibuses on the level, and gave next to no trouble.

The high prices people are willing to pay for the secondhand sporting grids of early date, show what an enormous sale there would be for the new 'buses.

And, I am sure, there are many riders of these excellent little machines who would welcome any attempt of Harry Martin to restart their manufacture. Purley.

DOES RACING HELP?

Sir,—Having read the remarks of Sydney du Rose under the heading of "Racing" in your issue of May 20th, one is prone to question on what authority he bases the state-ment that in reply to "'Does racing help the motor trade?' the answer comes back every time. "No." For his enlightenment, and the enlightenment of others

likely to be misled by his remarks, it should be noted that there is no test, be it on test bench, road test, workshop, or laboratory, which so surely discovers the weak points of the motor bicycle, either in relation to design or metallurgy, the motor bicycle, either in relation to design or incenting, as racing. Possibly when your correspondent is sailing along on his 1920 Utopia devoid of every mechanical trouble he will think kindly towards the professional speed merchants, and in lieu of his motto "Reliability, not spurts, please," substitute "Reliability Through spurts," and as graciously add, "Thank you."

H. C. G. ALLEN.

A CRITICISM.

Sir,-I am always most interested in "Ixion's" notes on Scott machines, as I happen to be riding one at present myself.

I wish I could tell him how to overcome the trouble of filling the oil tube. I have always found it to be a very tedious and messy job; the aperture is too small, and the

filler is inconveniently situated.

Perhaps "Ixion" can help me by telling me how he gets the two front transmission chains in alignment after shifting the countershaft. The Scott instruction book insists that perfect alignment is essential, which, presumably, is a fact of which most people are aware. Nothing, however, is said of the method of aligning the chains.

The Scott is a delightful machine to ride, its one great drawback being, to my mind, the transmission, which in my opinion consists of too many chains of too light a type.

F. D. MARTIN.

D. R. O'Donovan and the 31 h.p. Norton sidecar with which he recently broke several records at Brooklands.

ON THE NEW LONDON EDINBURGH ROUTE Two Metro-Tyler two-strokes at the top of the long climb out of Moffat

W LIGHTING REGULATIONS.

ir,-I notice with surprise that your readers appear to e the proposed new lighting regulations as a matter of rse. Personally, I fail to see why a motor cyclist, with without a sidecar, does not need the same illumination the road as the largest car, to enable it to maintain the d limit at night. To restrict the motor cyclist to one p, and to limit the size and power of that lamp, seems be most unreasonable.

he recommendations of the Parliamentary Committee on hts and Vehicles, in this respect, appear to have been unlated with no regard to the equal needs of illumination the car and the motor cycle. Can nothing be done to edy this state of affairs before it is too late? May I eal to the great associations and papers which work for interest of motor cyclists, to do everything in their er to prevent this extraordinary measure from becoming

e correspondent and others may rest assured that the oposed restrictions will not become law without the ost vigorous protest.—ED.]

EVE VALVE ENGINES.

r,—In your issue of May 15th you publish a letter under heading of "Sleeve Valve Engines" from Mr. D. P. rhead, who makes some observations on my invention. quite agree that, from the drawing published (which was ly diagrammatical), it would appear to have sharp edges the inner sleeve that would cause pre-ignition, but in tice there are no such edges, and I do not agree that pre-tion would be likely-less likely, in fact, than with a pet valve engine; as the cooling should he much better ng to the broad seating, direct cooling surface, and extra ng provided by the incoming charge.

regards his objection that mechaniefficiency will be low, owing to the of two sleeves, my patent applicaspecies is used, and still gives a ter port area than either of the nes mentioned, with only a in lift he poppet sleeve, still retaining all ne popper serve, still retaining an radvantages, including a perfectly netrical port arrangement. He also set that I will have trouble in getmy patent through.

might mention that I have already an air-cooled two-sleeve model runbut have not had time to get any ite results, but hope to be able to further details shortly. My model. laptation, has a bore and stroke of 38 mm., and is mounted on a 3½ h.p. ision engine having an external camwith chain drive from the timing

The crudeness of this model is o my lack of workshop facilities and

night mention that the details and ing published in The Motor Cycle

were made some time ago, and it was not my intention to divulge more than necessary to explain the principle. Muirhead and others will probably think the inner sleeve will rock on its scating, but I have many ways of overcoming this fault should it develop. W. M. ALLISON.

A.C.U. "GET-YOU-HOME" SCHEME.

Sir,-Recently I was driving my side-car outfit between Newmarket and Thetford, when I had the misfortune to have the rear cylinder blown off, with the result that my passenger and myself result that my passenger and mysel-were stranded on the roadside ten miles from the nearest station. A passing motorist kindly conveyed my "Get you Home" youther into Newmarket, and in less than one hour a courteous re-presentative of Criswell's Garage had arrived with a car and proceeded to tow

I Mofat the outfit into Cambridge, afterwards driving us to the station, thus enabling us to reach home the same evening, which otherwise would have been quite impossible. The expense incurred was, of course, very much

possible. The expense intered was, of course, very more in excess of my year's subscription to the A.C.U.

I pride myself on being a very careful driver, and this is the first serious accident I have had on the road in a period of about ten years. The moral is, that, however careful one may be, accidents may occur, and the wise motor cyclist will take advantage of the protection and assistance afforded by membership of the A.C.U. OTTO THOMAS.

SPEED OF A PIGLET

Sir,-A few weeks ago I read in your journal a letter from correspondent on the speed of a hare, and I thought the

following experience might be of interest:

While the guid wife and I were having our usual week-end jaunt, we suddenly encountered a small pig, which had evidently strayed from the farm. Owing to the prevailing high price of porkers, and the impecunious state of the family exchequer, our sty was empty. The wife and I exchanged meaning glances, but the little rascal must have sensed our itelenious intention, as he did a miniature hairpin turn, opened out the throttle, and was off in a flash. We gave chase, and when my "Try-some" combination was getting in the neighbourhood of about three figures per hour (guessed, as we were speedometerless for afore-mentioned reason), the object of our desires was about holding his start. His topographical knowledge of the locality was excellent, and just as we thought the prize was nearly in the toe of the sidecar the little porcine quadruped blighted our hopes by executing a quick leit-hand turn, followed by a fine nose dive under the farmyard gate, giving a derisive flourish of his caudal appendage as a final. Usual disclaimer. ZUMMERSET. Minehead.

A SUCCESSFUL RACING CYCLE CAR

A. Frazer-Nash (G.N.), who did well at Brooklands on Whit-Monday, when he won both the First Cycle Car and First Light Car Short Handicaps.

POLICE PERSECUTION.

Sir,—Is it not time that motor cyclists insisted on the A.C.U. and the A.A. taking up this question of the police and their petty tyranny on the road? Not only police traps, but now a new form of petty aggravation is arising, and we have police stopping one to measure number plates, examine silencers, and measure the size of letter on the number plates. In a word, motor cyclists (as well as car owners) are being badgered for no reason at all. It is beyond a joke, and surely the associations that profess to look after our interests could make a strong protest to the Home Office. Personally, I do not mind being stopped for my Omec. Personally, I do not mind being stopped for my licence, but when it comes, as it has this last week, to being held up several times in a day, and kept delayed from one's journey for anything from twenty minutes to half an hour, whilst police play about with measure and rule, and take copious notes, it becomes a nuisance.

No other traveller is subjected to such petty tyranny, and a strong protest should be organised at once. It is no good waiting for months, until, like police traps, the thing becomes a custom to which we meekly submit.

(REV.) R. C. MEASURES.

AIR STRANGLERS.

Sir,-Regarding the reference to "Air Stranglers" by "Ixion," in a recent issue, I venture to suggest that the latest pattern Everest carburetter represents the ideal

arrangement.

The 1920 pattern Everest is provided with two separate throttles, the forward one of which comprises the carburetter proper, housing as it does the jet, which is provided with a series of vertically spaced outlets arranged to be uncovered by the upward movement of the air throttle. This form of construction provides what may be called an expandable carburetter, as the jet area and the air port area increase in definite proportion. Several variations of jets are provided to suit all types of engines. At the rear of this is fitted the air throttle, which permits of the admission of air to the carburetter being restricted to any desired extent. For instance, at starting the whole of the air supply may be out off and the whole of the jets exposed, and, with the first depression of the kick starter, mixturemay be drawn into the engine of any desired strength, which enables an easy start to be obtained under any condition.

Another point is that, although the control is 99% automatic, the strength of the mixture may be altered instantly

to meet any particular requirement.

ERNEST P. EVEREST.

INCREASED MOTOR TAXATION.

Sir,-In view of certain statements which recently appeared in the press, may I restate briefly the case for private motorists. No representatives of their interests on the Government Committee accepted unreservedly the proposals for heavy increased taxation on a horse power basis as against the infinitely more equitable principle of taxation proportionate to use.

The scheme is all wrong, it is illogical and unjust to the last degree. The private motorist will not have it. We, his representatives, shall resist it to the bitter end by every

available means.

It surely is superfluous again to point out that whereas the main principle of taxation for road funds is that the revenue must be raised in accordance with the use of the roads, the many motorists who, by force of circumstances, are throughout the whole year only able to use their machines occasionally, are to be made to pay as though were always using the roads.

Why not make us all, moderate drinkers and abstrainers

that we don't want and can't consume?

We as a class, were invited to advise the Government how best and most equitably motor taxation should be imposed. Our advice was taxation proportionate to use, therefore-retain the petrol tax. A flat rate on petrol, with a reasonable increase in the existing vehicles taxes, will meet the case as far as the private motorist is concerned, and will find the money required from him with a greater degree of certainty than by means of the scheme proposed by the Government. This being so, one has yet to learn why the authorities are still endeavouring to thrust on the owners of private motor vehicles a scheme which is opposed by motorists throughout the United Kingdom.

If we, as merely a section of road users, have to pay big share for the use of the roads—and that in itself unjust—in the name of all that is fair, let us pay accordin to the measure of that use. Any other method is wrong and no amount of special or specious pleading by a Govern ment Department will make that wrong right. STENSON COOKE, Secretary

The Automobile Association and Motor Union.

SUMMARY OF CORRESPONDENCE.

Lenses in Goggles .- We have received a number additional letters regarding suitable lenses for motor goggl from readers who mention other opticians who supply sugoggles. These include E. R. O. Freeman and Sons, Merth Tydfil, and R. C. Appleby, 17, Church Street, Enfiel Middlesex. The latter optician also draws attention to t desirability of the glasses, as nearly as possible, corresponing with the centres of the pupils of the eyes. He points that the statement of the pupils of the eyes. out that usually goggle glasses are larger and wider than necessary. Mr. Appleby supplies and fits lenses to a goggles, either from prescription or by analysis from a proof lenses that suit the wearer. "C.D.F.," of Selt recommends Stanley and Co., 13, Railway Approach, S.E. and from several years' experience advises the fieuzel-gre as an anti-glare, which, he states, gives natural colourit whereas smoked or blue glass destroys this.

COURTEOUS TREATMENT .- In contradistinction to the ma complaints of bad treatment at the hands of manufactural repairers, we have received a large number of letter giving credit where due. "LP 1837," London, states of Messrs. Middleton, of Finsbury, recently supplied a pair Messrs. Middleton, of Finsbury, recently suppined a pair old type sidecar springs in three days at pre-war pric. "R.C.W.," of Sutton Coldfield, writes in praise of the go treatment from Messrs. F.N. (England), Ltd.; and J. Smith, Warrington, gives an example of the businesslimethods, of the Cowey Engineering Co. Messrs. Allda and Onions are praised by the Rev. B. H. R. Stower, a the makers of the Lincoln-Elk by T. Hunt, Maltby. "Ca. R.F.A." gives examples of good service by Sloan's Garaf High Street Amesbury, and the Magneta Renaiting High Street, Amesbury; and the Magneto Repairing C of 78, Hampstead Road, London, are recommended by

Paterson, of Donne

TAXATION .- We have been inundated with letters protest against the proposed new taxation. Generally t correspondence refers to the unfairness of the methods si gested, and a large number insist upon the retention of t gested, and a large number hasts upon the retention of the tax as the most fair means of taxation. W. M. Kir Ramsbottom, suggests a "strike" of motorists from Janua 1st, 1921, while J. McAllister, of Taynuilt, Scotland, the formulated a scheme for the issue of tax stamps, which are forwarding to the proper quarter. "Bradbus," are forwarding to the proper quarter. "Bradbus," Malmesbury, who uses his machine for business purpose consumes about two gallons of fuel per month, and does n see why he should pay an amount equivalent to a mu greater distance. J. T. Bradford, of Colne, urges eve motor cyclist to join either the A.A. or the A.C.U.

Jet Sizes.

Will you tell me the best size of jets to use with a three-jet carburetter? My machine is a 1913-14 Royal Enfeld with 6 h.p. J.A.P. engine.-C.H.

bably you will find that the jets most able are 000, 1, and 7, but it is usually essary to experiment with quite a nber of different jets in order to arrive the best setting.

An Old Pattern Engine. I have a single Rex engine,

85 mm. bore, and wish to know date of manufacture. Ball bearings are fitted to the mainshafts. internal cut cams operating nondjustable tappets. The magneto is ear-driven and fitted in the rear of he engine. The cylinder has two long

olding-down bolts in addition to four There is also a tap fitted in ie crank case, connected to the cylinder nder inlet valve seat .- F.W.W. engine you describe is one of the 2 models.

Difficult Starting.

My 1920 8 h.p. Matchless with Amac one-lever carburetter is very difficult to start. Sometimes I have to kick for about an hour before the engine starts, ven when I have injected petrol into eads on the top of the mixing chamber r vaporiser, two large and one small. 'he lower large one is screwed down is far as it will go, the upper large has a space under it in to 75 in.; ie small head is screwed inside the pper one of the two large ones, but screwed up gin. to hin. above the oper large one. Is it newness of achine only that causes the difficulty? his machine is said to be specially usy to start even in cold weather and om cold. I have found the opposite; n you help me?-O.A.

hout actual inspection of the machine is rather difficult to diagnose the ble. If you prime the engine it ald fire almost at once, and the fact it does not do so points rather to tion trouble than to any defect of carburetter. It would be advisable emove the contact breaker cover and nine the rocker arm, particularly ng whether this is free on its bush. details you give respecting the milled Is on the top of the carburetter ing chamber are rather vague; the truction of this part of the carbu-

retter is as follows: Screwed on to the top is the lid proper of the mixing chamber, on the top of this, and held close to it by a spring is a disc, which, when rotated, exposes air holes for the purpose of making temperature compensa-tions. Covering this again, but at a distance of about 13 in., is a dome, and in the centre of the latter is a small milled screw which acts as an adjustable stop for the Bowden cable. We would advise that you write to the makers of the carburetter explaining your difficulties, when they will, no doubt, forward you an instruction booklet containing sectional illustrations which will be of assistance to you.

Removing Magneto Sprocket.

Does the tapping off and on of a magneto sprocket as done by a proper mechanic injure the magneto ?--A.R.

Removing the magneto sprocket by the method mentioned will not cause any damage.

A Mysterious Knock.

Recently I went for a ride on my 3½ h.p. Sunbeam. Leaving Manchester, I made a non-stop run to Ambleside, and commenced the ascent of Dunmail Raise. Two-thirds up I heard a mysterious tap in the cylinder (like a hammer tap), and this continued until the power fell of all continued in the power fell of all continu the power fell off altogether, and I stopped. It was not the ordinary form of engine knock. Could you please advise me as to the probable cause of this noise?—G.W.B.

We can only conclude that the noise of which you complain was a common engine knock due to overheating or to pre-ignition. The former trouble might be caused by insufficient lubrication, and the latter by the use of a sparking plug which will not stand up to continuous driving, especially when bad hills are reached, and the throttle is opened wide. There is absolutely no reason why the 3½ h.p. Sunbeam should not climb Dun-mail Raise. (As you refer to the town of Ambleside, we think that the hill you attempted was Kirkstone Pass, since Dunmail Raise starts from Grasmere.)

Magneto Defect.

Some months ago I bought a 6 h.p. outfit fitted with a magneto which gave an exceedingly " spark in the front cylinder, and an exceedingly weak one and frequently none at all in the back cylinder. The trouble is apparently referred to in Young's "Magnetos," on pages 79-80, but I do not understand how to apply the remedy there suggested in "reducing the apparent to the proper section." "reducing the energy output."-J.H.L.

The remedy suggested by the writer of "Magnetos" is one involving questions of design, and could not be applied by the average rider. From your description we cannot tell you what the defect is in the magneto, but it may be due to the contact breaker casing, which carries the cams, being tilted a little, thus causing the points to open unevenly. Notice whether the points separate to the same extent when the heel of the rocker arm passes over each cam. If the contact breaker is in order, remove the carbon brushes and clean them; also clean the slip ring by inserting a piece of petrol soaked rag on the end of a peucil through a brush orifice, rotating the magneto at the same time. Should the magneto still give trouble, we would recommend you to send it to the makers.

Carrying an Extra Passenger.

I purchased a 4 h.p. Campion (J.A.P. engine) last season, and fitted a Henderson B1 sidecar, and find there is not sufficient room for my wife and child (aged nine) to travel in comfort. I have been told that a heavier sidecar would be too big a strain on the engine, so before doing anything I thought it best to seek your expert advice on the subject, and I should esteem it a favour if would give me your opinion .- A.C.G.

would give me your opinion.—A.C.C.
There is no reason why your machine
should not pull a heavier sidecar, or one
with a more roomy hody. At the same
time, however, we would suggest that a
better way out of the difficulty would be to fit a properly sprung pillion seat on the carrier of the motor cycle, preferably one having a back rest and support for the rider's feet.

Petroil Lubrication for Scotts.

I should be glad if you will give me some information on the subject of petroil lubrication on a 1919 Scott and sidecar; also the amount of oil used per gallon

of petrol. I have tried all adjustments of the sight-feed lubricator, but find this method very expensive, one quart of oil seldom lasting more than 100 miles. I have been well satisfied with the machine except in this one particular.-C.F.S.

When using one of these machines we obtain regularly 250 miles per quart oil consumption. There is no need to use the hand oil pump, as the engine itself will draw oil through the lubricators, and the drip should be regulated to about thirty drops per minute. It is not altogether satisfactory to use the petroil system entirely, as by this method the main bearings do not receive proper labrication. We would suggest that you add about one-third of a quart of oil to two gallons of petrol, and occasionally give a slightly additional charge of oil through the hand pump.

The following resolution has been passed by the Council of the British Association of Trade and Technical ournals, Limited:

"In view of the expression of opinion by Sir Auckland Geddes, as President of the Board of Trade, regarding the acceptance of advertisements of goods manufactured in late enemy countries, the Council have carefully considered the whole position. They now recom-mend members to adhere to the adopted policy of the Association not to accept such advertisements for the present, in order to enable British manufacturers to recover their normal working conditions. At the end of the present year (1920) the subject will again be considered, with a view to further advising members on the subject."

The publishers of "The Motor Cycle" readily accept this recommendation, and have, in fact, constantly refused offers of advertisements of German goods.

Consumption of Two-stroke.

Can you suggest any reason for excessive petrol consumption of a excessive petrol consumption of a 2th p. two-speed two-stroke motor cycle? The jet has been reduced to the smallest possible limit, there is no apparent leakage in the carburetter, and the engine has just been decarbonised in order to see if that would allow it to take more air and so reduce the consumption. In spite of this, the greatest mileage it will do is 40 m.p.g. of petrol.—M.R.

Instead of reducing the jet size, you might try the effect of lowering the petrol level so that it is not above in from the top of the jet. The ignition timing should also be fully advanced when the machine is running. You can verify the

timing by noting whether the piston on top dead centre when the contabreaker points are just commencing separate, the ignition control lever being fully retarded. Also make certain the the belt is adjusted to the correct tension

MANY QUESTIONS BY POST.

In addition to the selection of queries published weekly in the columns of "The Motor Cycle," an average of approximately 230 enquiries are answered through the post every week. Correspondents would greatly assist our task in answering so many enquiries if they would keep their queries concise and to the point.

An Auto-wheel engine carried in a standard cycle frame is the basis of this neat little machine. No structural alterations are made to the cycle other than a wider pedal bracket axle. forks were fitted as a luxury. The gear ratio is 11 to 1, and the chain wheel is clipped on to the coaster hub like a speedometer pinion. The conversion is the work of Mr. H. Brown, of Nelson (Lancs.)

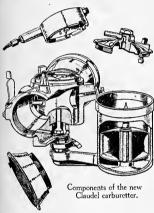

MOTOR CICLE

A NEW CLAUDEL-HOBSON CARBURETTER.

SOME ROAD EXPERIENCES.

FOR some time past we have been using a Claudel-Hobson single lever carburetter on a 4 h.p. Triumph and sidecar. To attach any fitting to a Triumph which is not made by the company may be likened to "painting the lily," but it is our duty to test the latest of everything. Hence the fitting of the new Claudel carburetter.

A full description of the Claudel carburetter appeared in *The Motor Cycle* of April 10th, 1919, page 369, and since that

date the latest pattern, though substantially the same, has been slightly modified in certain details. There is an ingenious arrangement on the top of the vaporising chamber allowing the Bowden control wire to be attached in three different positions, a point which is of considerable value to those who have to fit the carburetter. The control wire is attached to a disc rotating inside the cap of the vaporing chamber, and this disc is provided with two pegs engaging with holes in the actual throttle barrel. The disc is held in position by means of a spring similar to that employed on a magneto contact breaker. On the lower portion of the cap are three slots engaging with a projection on the carburetter casting, so that the control may be made to assume three different positions.

In actual running the carburetter greatly adds/to the flexibility of the engine. Slow running is all that can be desired, the acceleration is excellent, while the power is within the smallest fraction as good as that derived from a two-lever instrument.

Although, in designing it, the makers have fitted one lever, they apparently realise that atmospheric conditions affect the carburation considerably, especially on motor cycles, where the carburetter has to work in the open air and not under a warm bonnet, as in the case of a car. Consequently, the firm has fitted a small shutter with a slide through which the main air enters, allowing the degree of

fixed air at slow speeds to be controlled. When starting in normal weather the lever closing the shutter is drawn back and an easy start is at once obtained. When the engine is running the lever may be set to a midway position or farther open, according to the atmospheric conditions prograiting.

conditions prevailing.

In a consumption test we carried out
to other day no fewer than 76 m.p.g.
were obtained, a very satisfactory result
for a machine fitted with a heavy sidecar.

The Claudel-Hobson carburetter is made by Messrs. H. M. Hobson, Ltd., 29, Vauxhall Bridge Road, London, S.W.1.

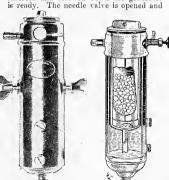

THE 1920 FALLOLITE GENERATOR.

IT is rather more than a year ago that we described the Fallolite lamp and generator. Since that time a great deal of work has been put into the designing of an improved generator for motor cycles. The lamp, which has been well tried and thoroughly proved for some time, remains unaltered.

It will be remembered that it is necessary in the case of the Fallolite lamp for the gas to be introduced to the lamp under slight pressure. Gas passes through a miniature Bunsen burner, protruding through the centre of the reflector, and impinging upon a pastile of rare earth, which becomes incandescent.

The carbide is inserted in the container until it is threequarters full, and the water is poured in until it reaches the level found on unscrewing the topmost of two plugs. A condenser chamber is embodied in the bottom of the generator, and any water which is condensed can be withdrawn by releasing a drain plug.

When the carbide container has been inserted and screwed down the generator

Exterior and section of the Fallolite

air is blown through the tube, and the needle valve immediately shut off. The slight amount of pressure so brought about causes the water to rise and attack the bottom of the carbide, when gas is at once generated. The gas then passes, ria the outlet shown on the left side of the drawing, and the small copper pipe into the condenser chamber, out through the tube on the right-hand side, and past

the needle valve to the lamp. As soon as the generation of gas starts, the pressure on the surface of the water causes it to rise continually to the carbide through the perforations in the bottom cup of the container. In the event of the pressure executing the limit of safety, gas can blow off through the safety valve shown on the left side of the drawing. The actual valve is protected by a cap, and the valve is of the hature of an ordinary tyre valve, namely, a piece of rubber slipped over a tule, closed at one end, with a small hole connecting it to the generator. In the event of this rubber perishing, it can easily be replaced.

It will be seen, therefore, that the generator is comparatively simple, and that there is nothing to go wrong, while the light shown by the Fallolite lamp is particularly brilliant.

The sole manufacturers of the Fallolite lighting set for the wbole of the British possessions are the Acetylene Arc Co., Ltd., 117, Bollo Bridge Road, Acton, London, W.3.

A NEW ACETYLENE GAS

A PRACTICAL form of head lamp, known as the Criscol, has been placed on the market by the Service Co., Ltd., 289, High Holborn, London, W.C.1. It is finished in black, with plated cowl and

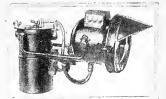

plated cowl and front rim, is provided with a genuine mangin leus, and has an adjustable focus.

adjustable focus. The chief item of interest in the outfit is the large generator, which is designed on extremely prac-tical lines. By undoing two wing nuts, the top of the generator, which conreservoir, can be detached. The carbide is carried in a small container, the bot-tom of which is perforated, and

A practical acetylene generator with separate water container.

water percolates through a central pipe having a brass distributer at its lower end. This container is free to oscillate, so that the waste carbide is shaken down to the bottom of the generator case.

The Criscol lighting set.

SCOTTISH SIX DAYS— Last Day's Route

Rumours of Undue Severity
Prove to be Wilhout
Foundation.

From Our Scottish Correspondent.

On one of the test hills to be included in the Scottish Six Days Trial,

T was with considerable surprise that one learnt that dissatisfaction had arisen concerning the alleged severity of the route chosen for the last day of the 1920 Scottish Six Days Trial, and that the Manufacturers' Union, clearly with insufficient data, were energetically condemning the course chosen as a "machine breaking affair" which should not be included in an event of such importance. Previous to the reception of this information the writer was well acquainted with the country over which the route lies, having traversed the same ground in a one day trial which was held in winter under adverse weather conditions, and including, moreover, shorter checks and several difficult hills not to be ascended in the Scottish Six Days; while it may be pointed out that in a more recent Edinburgh Club trial over the same route, the reason why only two competitors survived was that almost all went astray owing to a badly placed arrow!

Knowing that such discontent prevailed, it was with much satisfaction that we learnt that immediately succeeding the London-Edinburgh, several riders, including members of the Manufacturers' Union, who had journeyed north in the classic event, were to be piloted over the much discussed course in order to see for

themselves.

Unfortunately several who were expected evidently overslept, and the party that left the Edinburgh Club at mid-day was smaller than anticipated. The "official" cars were a 15 h.p. I.O.M. Straker-Squire, the property of A. H. D. Aikman Smith, secretary of the trial, and a 20 h.p. Chevrolet, with the veteran organiser, Campbell McGregor, at the wheel, carrying members of the trade. Several solo machines and sidecars, on which were mounted London-Edinburgh competitors, made up the procession.

Redstone Rig-an Easy Climb.

Glorious weather prevailed, and after lunch at Gifford, the first hill to be observed, namely, Redstone Rig, was quickly reached. This is an exceedingly easielil, hardly worth observing—indeed, the solo riders expressed some surprise that it was to be observed, as under the prevailing weather conditions it was hafdly necessary for them to change down from top gear, while the single-cylinder sidecars climbed it with consumnate ease.

Immediately succeeding, the route lies over miles of moorland track, presenting for the most part a

hard gravel surface, though in parts rough and rutty. There are many small water-splashes, one or two at the foot of steep rises, which may harass belt-driven machines a little, but none are in non-stop sections. This applies throughout the trial. All the machines that were with us had no difficulty whatever in following the Chevrolet, which, though carrying five stalwart passengers, covered the distance over which the check extends within two minutes of the time to be allowed to competitors.

A Long Trying Gradient.

The next feature of note is Elmscleugh Hill. This is a long, trying gradient, though quite straightforward. There are no hairpins which require "stunt" riding, and only in the case of a severe headwind would it cause any embarrassment to a modern machine.

Thenceforth the route is again over moorland track leading through beautiful scenery, and presenting several difficult gradients which are not to be observed in the Scottish Six Days. At one point a burn of some depth is crossed, and here most of the solo riders were compelled to balance with their feet in the water. We found several Edinburgh motorists here, and forthwith Claude Duncan (Norton), J. Newman (3½ Sunbeam), and J. W. Wills (2¾ Verus) amused the assembly by scaling the almost perpendicular course of an old pack road leading up from near the water's edge.

The third test hill to be included is Talla, which is a long straight hill with a severe gradient, but not

extraordinary in any way.

Summing up the impressions of the day, it can quite safely be said that every one present was considerably surprised that, through lack of first-hand knowledge, this occasion should have been seized upon for causing dissatisfaction with the choice of the Edinburgh Club. This last day is infinitely less severe than some of the routes with which the famous Scottish event is associated. There are no hills to compare with Amulree, and no checks so difficult as the check which last year immediately succeeded Amulree. Competitor should experience difficulty on this day, unless, of course, his machine has considerably fallen off in power during the preceding five days, and one imagines that one of the objects of the trial is to test the machines for the maintenance of power.

Times to Light Lamps.

June				9.37	p.m.

Benzole Exports.

No fewer than 12,769 gallons of benzole and toluol were exported from this country last month. In April, 1919, the figure was 5,199 gallons.

Where the Petrol goes to.

The late Mr. Dodge (of Dodge car fame) owned a 30 m.p.h. motor yacht which consumed 130 gallons of petrol per hour, enough to take the average sidecar 10.000 miles.

Taxation and Prices.

The proposed taxation of £1 per h.p. on cars has had the effect of raising the value of light cars. Some people prefer to pay £100 extra for a car which may be taxed £10 or £12 to purchasing a more powerful car at a lower price, but which would be liable to beavier taxation.

Open Speed Trials at Luton Hoo Park.

Permission has been granted to the Luton and S. Beds A.C. by Lady Ludlow for the use of Luton Hoo Park as the course for the open speed trials to be held on July 24th. Full particulars and entry forms will be sent to interested motor cyclists on application to the hon. trial sec., Mr. J. Simpson, George Hotel, Luton.

A Loss to the Women's Police Service.

We regret to record the death of Miss Damer Dawson, Commandant of the Women's Police Service. Miss Dawson was a keen motor cyclist, and used a motor cycle in the course of her duties.

Humber Trial.

All arrangements for the annual Humber reliability trial, fixed for June 26th and open to employees of Messrs. Humber, Ltd., are well in hand.

All types of motor vehicles can be entered, and in addition to the Humber challenge cup, silver cups and other prizes will be awarded in the various classes.

This trial was instituted last year in order to interest employees in their productions, and to show in a practical manner the difficulties which motor vehicles are expected to overcome.

How to be Popular.

The Ilkley L.C. and M.C.C. is nothing if not up-to-date; acting upon a suggestion arising from our recent correspondence, under the above heading, on the subject of tipping at the luncheon stops of reliability trials, a "food controller" has been appointed for the open trial on Saturday, 5th inst. For a quite moderate sum this gentleman (Mr. N. O. Vinter) will arrange for the competitors' lunch and tea, and the disbursement of suitable gratuities at the stopping places, thus taking all responsibility upon himself for the "popularity" or otherwise of the trial with the hotel staffs. Incidentally, this trial will not include a large number of watersplashes as many have thought possible.

Special Features.

EQUIPMENT FOR A LONG RUN.
ORGANISING A BIG TRIAL.
NOTES FROM THE ISLE OF MAN.

Printers' Slips.

Printers' slips in daily papers are responsible for many mistakes in advertisements of motor cycles. Each week we receive from readers a large number which vary from lightweights at £850 to 1820 big twins.

Team\Winners at Storeton.

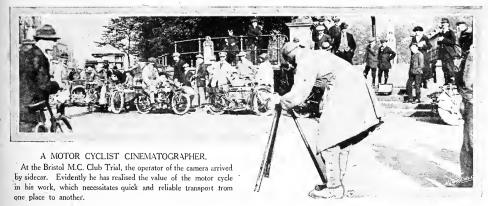

The awards in the Liverpool M.C. Speed Trials have now been confirmed, and are substantially the same as have already been published. The team prize, however, goes to the Norton team with twenty-two marks, the A.J.S. coming second with twenty-oné.

A Youthful Gold Medal Winner.

The youngest successful London-Edinburgh competitor is probably J. C. Watson, who piloted a 4 h.p. Harley-Davidson flat twin. He is the eldest son of Alderman Duncan Watson, Mayor of Marylebone, and managing director of the Harley-Davidson Motor Co., London.

The Motor Cyclists' Camp.

Many motor cyclists may decide to spend their holidays under convas this year, and so revive memories of 1915 and 1916. No more independent or healthful method of holiday making can be imagined, and given a powerful side-car machine, the mobility of the whole outfit is a decided advantage.

T.T. and Summer Number.

Our issue for June 17th—published on the day of the Senior T.T. Race—will form the T.T. and Summer Number, and will contain special features of interest to the sporting motor cyclist who wants the latest T.T. news. Touring and regular features will not be neglected.

All competitors in the T.T. will be obliged to wear this type of safety helmet. In 1917 it probably saved the life of several riders who had spills.

A.C.U. Rally at Knutsford.

Two hundred and fifty members representing eleven different clubs were present at the rally and reunion of the North-Western Centre A.C.U., h Knutsford Heath on the 23rd ult. held at

A large crowd of spectators and motor cyclists were present to watch the arrival of the various clubs. Eleven individual prizes were awarded for smartness, ingenious device, oldest machine, and

other classes.

The following table shows the result of the official count :

A Demonstration of Reliability.

The Wooler Breaks Long-distance Records.

ON Thursday, May 27th, F. A. McNab, astride a 23 h.p. Wooler, success-fully broke and established several records. In Class B for 350 c.c. machines, records. In Class B for OSC C.C. Inactines, he raised a speed of the 350 mile record, previously held by R. N. Stewart (N.S.U.), to an average of 42.86 m.p.h., and created new records covering a distance of 400, 450, and 500 miles, whilst in that same class the eight and nine-hour records previously held by Stewart were also, by the conservations of the control of also broken. His successes were also extended to the 500 and 1,000, c.c. lasses. In the former he established new ten, eleven, and twelve-hour records at an average speed of 40 m.p.h., and in the latter class he raised a speed held by H. A. Collier, on a Matchless, to 40.60 and 40.62 respectively in the twelve-hour and 500-mile records.

The engine used was that fitted to the machine on which he made his attempt a a broken connecting rod. The equipment included Palmer tyres, John Bull belt, C.A.V. magneto, Vacuum oil, and Pratt's spirit. An additional oil tank was fitted in order to reduce the number of halts.

CLASS B .- 350 c.c. New Records.

		h,	m.	s.	Speed,	Speed.

Provisional results of the Cork and District M.C.C. one day trial. -

HUTCHINSON CUP AND SIDECAR PRIZE.—J. Healy (4 Norton sc.); second prize, A. D. Carton (3½ Sunbeam); third prize and president's novice cup, R. A. Pericho (6 Martinsyde-Newman), TEAM PRIZE.—R. S. Russell (5½ Scott), E. B. Russell (5 Brough), and R. A. Pericho (Martinsyde-Newman),

8 hours' record 342 1,338 42.84	
9 ,, ,, 375 4,668 41.77	
10 ,, ,, 412 906 41.25	
11 ,, ,, 442 693 40.22	_
12 ,, ,, 487 - 455 - 40.60	_

McNab's speeds also take previously unestablished ten, eleven, and twelvehour, and the 450 and 500-mile records for the 500 c.c. class, and the twelve-hour and 500-mile records in the 1,000 c.c. class. He also establishes a record for the seven hours in Class B (350 c.c.). Such results demonstrate the successful development of the 23 h.p. flat twin.

A RECORD IN POST-WAR RECORD-BREAKING. F. A. McNab at speed on a 23 h.p. Wooler. He broke and established sixteen records in twelve hours.

AN IRISH OPEN TRIAL.

syde-Newman). Lightweight prize: C. W. Johnson (21/2 Diamond). Special prize: J. A. Wilson (4 Triumph).

GOLD MEDALS.—R. S. Russell (3% Scott), J. A. Wilson (4 Triumph), J. T. Walsh (4 Triumph), A. D. Carton (3% Sunbeam), E. B. Russell (5 Brough), P. H. Hurse (44 B.S.A.), J. Healy (4 Norton Sc.), J. Brown [2% Donglas), C. A.

Murphy (Enfield), R. A. Pericho (Martinsydo-Newman sc.), and J. Gibbons (4 Triumph), STLVER MDDALS.—R. Swanton (7-9 Indian sc.), R. H. Good (4 Norton sc.), and J. Woods (4/4 B.S.A.).

The start of the Senior One Hour Trial, won by J. Emerson on an A.B.C.

The B.M.C.R.C. Brooklands. Meeting at High Speeds and Exciting Finishes,

U NDER good weather conditions, the B.M.C.R.C. held its second 1920 members' meeting on Saturday last, Some excellent racing was witnessed. All the events were started and finished at the fork, an arrangement extremely con-

venient to the crowd of onlookers. The first event, the Novices' Scratch-Sprint for 350 c.c. solo machines (two laps), drew eight starters. Tudor Thompson, on an overhead valve 23 Douglas, won the event at a speed of 55.21 m.p.h., while G. S. Boston (23) 55.21 m.p.h., while G. S. Boston (2²₄ A.J.S.) and A. F. Houlberg (2³₄ Wooler) finished second and third respectively. A considerable number of competitors

entered for the second event, the Novices Scratch Sprint, 500 c.c., solo machines, and fifteen faced the starter. A very fine race resulted over a distance of two laps, in which H. H. Beach (5½ Norton) won at a speed of 64.2 m.p.h.

The third race on the programme, the Novices' Scratch Sprint over two laps for solo motor bicycles not exceeding 1,000 e.c., attracted six starters. This event provided an exciting struggle between O.

M. Baldwin on a Matchless with an 8 h.p. o.h.v. J.A.P. engine and H. R. Harveyson riding an eight-valve Indian, the former being the winner at a speed of 72.25 m.p.h.

Following this event was a race for Following this event was a race for passenger machines (500 and 1,000 c.c.), two laps. J. D. Hawkes, on a racing Morgan with an eight-valve M.A.G. engine, easily finished first. O. de Lissa on a 996 c.c. machine, came home second, with E. C. E. Baragwanath, riding a Zenith sc., third. The winner's speed

was 59.22 m.p.h.

In view of the near approach of the T.T., the Junior and Senior one hour races were most interesting. The for-tunes of the competitors varied very considerably. In the Junior event ten machines started, and the result was as follows:

(1.) Tudor Thompson (23 Douglas), 50 m. 77 yds.

(2,) A. E. Wills (23 Douglas), 46 m. 1,630 yds. (3.) A. Watson (23 Douglas), 45 m.

Ten machines started in the Senier One Hour event. J Emerson put up one nour event. Semerson part up a wonderful exhibition of consistent and fast racing with his A.B.C., and at the finish was seven lays ahead of the nearest competitor, after having completed twenty circuits at a speed exceeding 64 m.p.h. The results were:

1. J. Emerson (3 A.B.C.), 64 miles 180 yards.

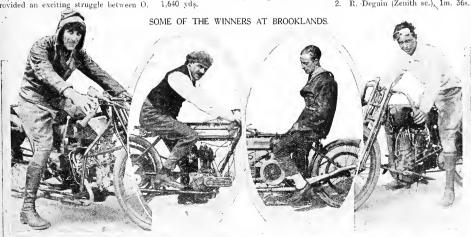

2. L. E. Pope (Zenith), 45 miles 456 yards.

5. H. R. Harveyson (Indian Scout), 41 miles 245 yards.

The Surbiton Handicap, two laps, was the last item on the programme, the entries ranging from a 211 c.c. twostroke New Hudson to a Henderson side-car. This event was undoubtedly the most exciting race during the afternoon. The results were :

1. F. R. Spikins (Harley-Davidson), handicap 6s., speed 68.32 m.p.h.

2. R. Deguin (Zenith sc.), 1m. 36s.

J. Emerson (A.B.C.), Senior One Hour Trial Race.

H. H. Beach (Norton), Novice 500 c.c. Scratch Race.

Tudor Thempson (Douglas), One Hour Junior Trial Race.

F. R. Spikins (Harley-Davidson), Surbiton Handicap.

LONDON-EDINBURGH RESULTS.

An Analysis of Official Results. Complete List of Motor Cycle and Cycle Car Competitors and Awards.

282 Motor Cycles, Sidecars, and Three-wheelers started. 222 finished. 121 Gold Medals. 9 Bronze. 13 Disqualified. 75 Silver.

OFFICIAL TABLE SHOWING STARTERS, FINISHERS, AND AWARDS,

	Entered.	Started.	Retired:	Finished.	Gold Medal.	Silver Medal.	Bronze. Medal.		No Award.	Dis- qualified.
Solo Motor Cycles	166 .	146	26	120	71	28	6	2	2	8
Sidecars and Three-wheel Cycle Cars	150	136	34	102	47	47	. 3	4-	-	_ 5
*Four-wheel Cycle Cars and Cars	65	54	10	44	29-	10	1	-	1	3
Totals	381	336.	70	266	150	85	10	2	3	. 16

^{*} Included in this class were 9 cycle car starters, of which 2 retired, I was disqualified, I no award, 3 gold medula, and 2 silver medula.

S will be seen from the accompanying official schedule, solo motor cycles did hetter in the London-Edinburgh run than either of the other two classes of vehicles. The finishers were 82% of of vehicles. The finishers were 82% of the statters, while in the sidecar and three-wheeled cycle car class only 75% of starters finished, as against 81% in the case of cars, which class included four-wheeled cycle cars. Analysing the results further, it is interesting to see which type of engine made the highest score. If we exclude the car class, and with it the four-wheeled

the car class, and with it the four-wheeled cycle cars, a careful examination of the official lists of awards reveals that flat twins lead with 85.7% finishers of those that started, two-strokes coming second with 84.6%, V twins third with 81.0%, single-cylinder four-strokes 72%, and four-cylinder machines last with 62.5%

Actual awards have not been taken into consideration. We have merely taken those that started and finished, disregarding the disqualifications and "no awards.

CIO

There were ninety four-stroke singles in the trial, of which sixty-five survived, among which the greatest number of gold medals were awarded.

Ninety-three V twins finished out of 116 starters, and out of forty-two flat twin starters thirty-six finished.

There were twenty-six two-strokes in the run, and the retirements were four; while the four-cylinders suffered three casualties out of eight starters.

Outstanding Performances.

Reviewing the individual awards and the respective performances of various makes of machines in conjunction with our impressions of the trial, we give pride of place to half a dozen makes. The success of T. G. Bullus (3½ P. and M. sc.) is worthy of special mention, for with only is worthy of special mention, for with only two speeds this 500 c.c. sidecar successfully negotiated Kirkstone and secured a "gold" while so many higher powered mounts failed to negotiate the hill. True, the makers cannot claim a 100% result, since the solo machine of this make BROUGH.

W. McKeggie. Gold medal.

SPEED TRIALS IN YORKSHIRE.

The Harrogate and District M.C.C. Meeting.

RAIN in the morning and thick mist during the afternoon nearly put an end to the speed trials organised by the Harrogate and District Club last Saturday; but, owing to a fair number of competitors braving the elements, it was decided to run the event in a less ambitious manner than had been planned. Owing to insufficient entries, four of the classes were abandoned.

The results of the remaining classes were as follow:

350 C.C. CLASS.
T. F. Leak (254 Douglas).
G. F. Midwood (254 Douglas).
W. R. Hill (214 Triumph). 560 C.C. CLASS.

W. E. Grange (3½ Norton). C. Michell (4 Triumph). W. Atkinson, junr. (4 Triumph). UNLIMITED.

W. E. Grange (312 Norton). C. Micbell (4 Triumph). H. Hamlyn (8 Zenith). PASSENGER MACHINES (UNLIMITED).

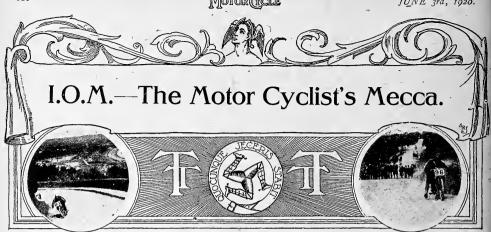

1. W. E. Grange (31 Norton sc.).
2. S. Fleming (7-9 Harley-Davidson sc.).
3. R. Robinson (5-6 Rover sc.). W. E. Grange, who won three out of the four classes, made the fastest time of the day.

An obvious feature of the event is the outstanding performance of a single-cylinder machine. As happened in the case of the Weston and Liverpool speed trials, the 500 c.c. single has again proved itself to be more than the master of from 6 h.p. to 9 h.p. twins, even when towing

a sidecar. In short speed events a machine capable of great acceleration has a decided advantage.

Despite bad weather, Yorkshire motor cyclists' enthusiasm was not damped at the Harrogate Speed Trials, and good performances were made.

Latest News from the T.T. Course. Practising now in Full Swing. Preparations and Programme for the Manx Carnival. Entries now Thirty-two for the Junior and Twenty-nine for the Senior Race.

RACTISING is now in full swing in the Isle of Man. From 4.30 each morning until 7 o'clock aspirants for the Blue Riband of the motor cycle world are getting accustomed to the course, and trying out the machines on which so many hopes are placed by rider and maker alike. All the Sunbeam riders are in the Island and their machines garaged at Skinner's Old Stables, Victoria Road, Douglas.

garaged at Skinner's Old Stables, Victoria Road, Douglas. The men look very smart in their new leather suits. Mr. J. E. Greenwood is in charge. The A.B.C.'s are on the course. Great difficulty is being experienced in bringing the machines from the boat owing to the exorbitant demands of the porters, but with the assistance of the men of the Steam Packet Co., the motor cycles are being landed safely and

Packet to, the moor cycles are string at the Woodburn the official Norton team are staying at the Woodburn Hotel, the Indians are at the Queen's, and the A.J.S. representatives are staying near Crosby. The official headquarters of the A.C.U. are at the Castle Mona Hotel, whilst their offices are in Athol Street, opposite the Times office. For experience of a proposite the Anglo-American

offices are in Autol Street, opposite the Times office. The convenience of arriving motorists, the Anglo-American Oil Co., Ltd., have arranged for petrol to be available on the Victoria Pier. Motorists visiting the Island are reminded that it is necessary to register with the Highway Board, whose offices are also in Athol Street, Douglas.

The attractive feature of the finishing section of past events is now cut out and in its stead is given the new portion comprising the Glencrutchery Road the new portion comprising the Generutchery Road and the steep descent into it from Snaefell Road. The hairpin near the Governor's house is the bête noire of the whole circuit. The road practically doubles upon itself at this point. After the bend there follows a further twist in the narrow road.

Alteration a Doubtful Improvement.

One of the Sunbeam riders describes this part of the course as a man trap, which has been included to meet the wishes of some of the inhabitants. The general opinion seems to be that the alteration in the course is not an improvement.

As a precaution against accidents, and for the safety of the general public, the route and other parts of the Island have been placarded with

warning posters.

The fact that there are far fewer competitors in this year's Tourist Trophy Races should in no way imply that the races may not be as successful and popular as in 1914. The course will be much less crowded, which will naturally benefit both the

competitors themselves and the marshals and stewards competitors themselves and the marshals and seewalls of the A.C.U., while we have a bevy of extremely fast machines in both the Junior and Senior events, with a sprinkling of well-known riders who competed in the Isle

sprinkling of well-known riders who competed in the last of Man before the war.

From the point of view of sight-seers actually on the course at the time of the races, the reduction in the number of competitors, taking into account the percentage of machines dropping out of the races, makes for a longer wait between each machine passing by. However, if one can prophesy so early, it looks as though there will be a big struggle between one or two groups of well-known machines, and an exciting finish in the two races.

Machines and Riders. Looking through the complete entry list, we find that in the Junior Race there are the following: Eight A.J.S., five Diamond, four Douglas, four Levis, four Blackburne, three Wooler, two Ivy, one New Comet, one Dot-Jap.

The last mentioned machine is a late entry, and will be ridden by Eric Longden. Numerically, the A.J.S., ridden by Eric Longden. Numerically, the A.J.S., of which six have been entered by the makers, hold the field, Eric Williams, the hero of the 1914 Junior Race, riding one of these machines as he did in the last pre-war race. This rider is also competing in the Senior Race on a 3½ h.p. Sunbeam. A. H. Alexander, another well-known T.T. rider, is riding a Douglas in the Junior, while H. R. Davies, who tied for second place in the last Senior Race, will ride a 2½ h.p. A.J.S. in both 1920 events. It will be interesting to see how the four small two-stroke Levis machines perform. They are known to be extremely tast, and between them and the new overextremely fast, and between them and the new overhead valve Diamonds there will be a stiff contest for The Motor Cycle Trophy for the 250 c.c. class. No fewer than fourteen Norton machines are com-

peting in the Senior Race, and their riders would make a keen race by themselves. On the other hand, we have five 3½ h.p. Sunbeam machines, on being ridden by G. Dance, who has been so successbeing ridden by G. Dance, who has been so successful in racing during the past season, and five 3½ h.p. Indian Scouts, two 3 h.p. A.B.C. machines, a 3½ h.p. Douglas, and a 3½ h.p. Duzmo; all of these machines forming a big battery against the numerical strength of the Norton assembly. In this race also we have the little 2¾ h.p. A.J.S. competing against all the rest, a sure sign of its prowess and the confidence of the A.J.S. Co. H. R. Davies will ride this machine. machine.

The Tourist Trophy.

O.M .- The Motor Cyclist's Mecca .-

The whole of the Island is keenly looking forward to the aces, and a great carnival week has been arranged to take alone at the same time. During that week Douglas will udeed be the Mecca of motor cyclists. Tons of confetti have peen ordered for the carnival. The arrangements for the veek include the following:

rogramme of the T.T. Week, June 14th to 19th. MONDAY .- Machines for the Junior Race must be presented

for inspection by the A.C.U. 100 yards flat race for world's championship for prizes

exceeding £100 in value. Tursday.—Junior T.T. Race.

Wednesday.—Horse races at Belle Vue.

Machines for the Senior Race must be presented for inspection by the A.C.U.

Parade of decorated motor cycles, cars, bicycles, horsedrawn vehicles, etc.

Chursday.—Senior T.T. Race.

Presentation of trophies by His Excellency the Lieutenant-

Governor. ERIDAY .- Flying kilometre race for motor cycles, 500 c.c.

350 c.c. and 250 c.c. classes.

Gymkhana at Belle Vue.

Land and water sports for men of His Majesty's visiting

Walking competition around the T.T. course for prizes up to £100.

Bowling tournament.

Golf competition. Fishing competitions.

A special permit has been issued by the A.C.U. for the tying kilometre, and competitors taking part in the T.T. tace are eligible, together with members of the Manx Motor tycle Club. The entrance fee for the T.T. riders is one unea, and for other competitors 10s. 6d. The latter cometitors have to send their name and address to the hon. ec. of the M.M.C.C., Hill Street, Douglas, together with heir 10s. 6d entrance fee to the club, so that the entrance ee, as a matter of fact, is the same for everyone.

Grandstand.

The Douglas Corporation have placed the Playing Fields the disposal of the A.C.U., and this will be the starting blace. There will be a public enclosure at 2s. 6d., a grand tand and the press stand at 10s., and another stand, which is hoped will be occupied by His Royal Highness Prince tibert, the patron of the Auto Cycle Club, who has been avited by His Excellency Lieut. Governor, Major-General by, C.B., C.V.O., to attend the races. Facing the grand that the timekeness hoves scoring beared and the tand are the timekeepers' boxes, scoring boards, and the eplenishing depot for the machines.

Grandstand Accommodation.

It is evident that those who wish to secure a seat at the starting and finishing point at Douglas should lose no time in obtaining their tickets. The Anto Cycle Union announces that a number of applications for seats in the grand stand name a number of applications for seats in the grand stand have already been received, and the accommodation at this particularly advantageous point is, of course, limited. Reserved seats are available at 10s, per day and unreserved at 5s, per day. Tickets are issued from the A.C.U. local office at Athol Street, Douglas, to which address applications for tickets should be sent without dalay. for tickets should be sent without delay.

We would remind competitors who have not yet gone

to the Island that they may not wear metal-studded boots.

Replenishing Depot.

The replenishment depôt will be at the starting point, where separate wired-off compartments, about 6ft. broad and 46in. in length, will be allotted to each driver.

The following are the entries for the team prizes:

JUNIOR RACE.

I. THE BURNEY AND BLACKBURNE TEAM: J. A. Watson-Bourne, P. J. Enticknapp, and J. S. Holroyd.

- 2. THE BUTTERFIELD TEAM: F. W. Applebee, Gus Kuhn, and R. O. Clark.
- 3. THE D. F. ANO M. TEAM: Bert Houlding, P. Pike, and F. J. Price. 4. THE A.J.S. TEAM: H. C. Heath, H. R. Davies, and Eric Williams.
- 5. THE WOOLER TEAM: J. H. McDowell, A. F. Houlberg, and J. S. Clayton.

SENIOR RACE.

r. THE INDIAN Scour's TEAM: D. S. Alexander, F. W. Dixon, and Bert Houlding. Reserve, H. R. Harveyson.

THE VICTOR HORSMAN TRAM! Harold Petty, Victor Horsman, and 2. THE VICTOR N. C. Sclater, junr.

3. CAPT. ALEXANDER LINOSAY'S TEAM: Capt. Alexander Lindsay, M.B., Jack Thomas, and Norman Błack. 4. THE SUNBEAM TEAM: F. C. Townshend, G. Dance, T. C. de la Hay. Reserve, H. R. Rice.

5. THE NORTON TEAM: D. M. Brown, J. W. Shaw, and Noel Brown.

6. Mr. T. Simister's Team: V. Olsson, F. C. North, and T. Simister.

Sailing Arrangements.

The following timetable of steamer sailings undoubtedly will be of use to all who intend going to the Isle of Man either for the practising or to witness the races:

FROM LIVERPOOL.

To-day (Thursday, June 3rd) and Friday, June 4th,

11.30 a.m. Saturday, June 5th, and Monday, June 7th, 10.30 a.m. and 3 p.m.

Tuesday, June 8th, to Friday, June 11th, 11.30 a.m. Saturday, June 12th, to Wednesday, June 30th, 10.30 a.m. and 3 p.m.

FOUR-STROKE v. TWO-STROKE. ASPIRANTS FOR THE MOTOR CYCLE TROPHY FOR 250 c.c. MACHINES.

G.-Kuhn (21 Levis two-st.)

F. W. Applebee (21 Levis two-st.)

RIDERS OF SINGLES IN THE SENIOR EVENT.

G. Dance (31 Sunbeam), the premier speedman of 1919, of whem much is expected in the Isle of Man.

H. Le Vack, who is riding the new 3½ Duzmo machine, the only single in the Senior event with an outside flywheel.

Eric Williams, the holder of the Junior Trophy, who will ride a 23 A.I.S, in the Junior and a 33 Sunbeam in the Senior Race.

H. R. Davies, who tied for second place in the 1914 Senior event, will ride a 24 A.J.S. in both Junior and Senior Races.

Extras. Thursday, June 17th, 1 a.m. Saturdays, June 12th to 26th, 12.50 night.

RETURN SAILINGS FROM DOUGLAS.

To-day (Thursday, June 3rd) and Friday, June 4th, 9 a.m. Saturdays, June 5th, and Monday, 7th, 9 a.m. and 4 p.m. Tuesday, June 8th to Friday, 1th, 9 a.m. Saturday, June 12th, to Wednesday, June 30th, 9 a.m.

and 4 p.m.
Extras. Thursday, June 17th, 12.30 night.
Mondays, June 21st and 28th, 12.30 (Sunday midnight).

NOTES IN THE PRACTISING.

Official practising commenced at 4.30 a.m. last Monday. Omerai practising commenced at 4.50 a.m. last stollday. The day dawned favourable at Douglas, though rain was reported to be falling on Snaefell as the small band of enthusiasts assembled on Bray Hill to witness the start. Special Constable Geo. Brown, a Manx motor cyclist, started the first machine at 4.50 a.m. This was D. S. Alexander the first machine at 4.50 a.m. Inis was D. S. Alexander (Indian Scout), followed at one minute intervals by de la Hay (Sunbeam), Townshend (Sunbeam), Abram (A.B.C.), Eric Williams (A.J.S.), a reserve Sunbeam ridden by Rice, Reg. Brown (Sunbeam), G. Dance (Sunbeam), Houlding (Indian Scout), and E. Greenwood (23 Douglas). Fifteen minutes later the Norton team started on the round at similar intervals, and later still the A.J.S. team turned out. The first rider to complete the course was de la Hay, who overhauled Alexander. The times made while prac-

tising are not officially announced.

Approximate times were as under:

G. Dance (3] Sunbeam. . . 49 mins. D. M. Brown (Norton) . . . 47 mins R. Brown (Norton) . . . 54 V. E. Horsman (Norton) . . 55 V. E. Horsman (Norton) . . 58 C. Williams (2³ A.J.S.) . . 50 D. S. Alexander (Indian) . . 53 N.

Times made by all were good, though, of course, not what they will be later on, when the riders become thoroughly conversant with the course. The new hairpin at Governor's Bridge was taken very cautiously by all the Sunbeam men. Competitors who have no magneto cut-out or safety helmets have to sign an undertaking that their practice laps will not necessarily count as qualifying for the actual

/ will be published on Thursday, June 17th, 1920.

Rugby M.C.C.

A sporting 100 mile non-stop reliability trial, for the silver cup (won outright) presented by Mr. G. Le Champion, will be held on the 20th inst.

Basingstoke M.C.C.

Membership now totals forty, and several successful runs have already taken place this year. The next event will be in the form of a surprise run to be held on the 6th inst.

Dorchester . M.C. and L.C.C.

Thirty riders took part in the reliability trial to Sidmouth; recently held by this club. Some very good performances were made on Trow Hill, only two competitors failing to make a clean ascent. The awards in each class were won by W. G. Churchill (4 Verns sc.), G. L. Mawish (3½ Rudge-Multi), and C. R. Gage (3½ Sunbeam).

CLUB NEWS.

Bedford and District M.C. and L.C.C.

Out of thirty-eight starters in the recent 100 mile reliability trial for the "Rudge" cup, only ten failed to make non-stop runs. The winner was J. Woodnon-stop runs. The wing (4 T.T. Triumph).

Luton and South Beds A.C.

The reliability trial from Luton to York and back, originally fixed for the 26th inst., will take place on June 12th. The change of date is to enable this club to enter a team in the M.C.C. Team Trial for The Motor Cycle Cup.

Carmarthen M.C. and C.C.C.

Twenty competitors took part in the reliability trial recently held by this club. Starting from headquarters, the club. Starting from heauquarers, modern to Newcastle-Emlyn was taken, Pentrecourt, returning via Velindre, Pentrecourt, and Llandyssul. Scourfield (5-6 Rover) ran very consistently, being only 5s out on time. The results were as follow. C. C., W. Evans (2½ Clyno); 60c. C. W. Thomas (4 Humber); single gear, A Bulock (3½ Triumph); sidecars, Swindel (7.0 Lwlies). (7-9 Indian).

Club News .-

Redditch and District M.C.C. Members wishing to compete in the half-day reliability trial for the President's Cup should send in their particulars and fee of 7s. 6d. to the hon sec. by Saturday. The trial takes place on the 12th just, over a course of about eighty-five miles, and n addition to the cup several valuable prizes will be awarded.

WITH THE CLUBS.

(1) Norton, Triumph, and Rudge riders leaving Bridlington in the recent Hull Twelve Hours Trial.

(2) The "tit-bit" of the last Botton M.C.C. Trial—the hairpin on Revington Pike.

(3) Several novel ideas were introduced at the recent Newcastle-upon-Tyne and District M.C. Surprise Competition, one of which was the blindfolding of the riders at the start.

(4) Brough and Blackburne riders crossing a watersplash during the Sheffield and Hallamshire's M.C.C. Trial. Competitors rode in pairs.

Taunton and District M.C.C.

In conjunction with the Bournemouth. Bridgwater, Dorchester and Yeovil clubs, in inter-club trial over Dartmoor to Land's End has been arranged for July ird, starting from Yeovil at 7 a.m. Full particulars can be obtained from Mr. Stuart Goodman, "Littlecourt," Taunton.

Bath and West of England M.C.

This club is holding a twelve-hour eliability trial to Lynmouth and back, ncluding the famous Porlock Hill, next Saturday. In addition to the club awards of medals, Messrs. F.R.S. Lamps. Ltd., have given the club a Victory F.R.S. electric combination set for the best performance in acceleration and hilllimbing.

Ealing and District M.C.C.

The first annual run from London to Holyhead for the "Mandes Challenge Shield" will be held on July 30th. The course, which is about 340 miles in ength, traverses some of the finest eenery in Wales, running via Farringdon, Hereford, Llanidloes, Bwlch-y-Groes, Llanrhaidr, Capel Curig, and Menai Bridge.

One of the Most Recent Spring Frame Machines.

The Avres-Layland-A Sidecar Outfit with Flat Twin Engine and Duplex Frame.

SOME months ago we described the design of the Ayres-Layland motor cycle, and we are now able to give photographs of the complete machine. photographs of the complete machine. As will be seen, the frame is of the duplex type, carrying the Coventry Victor engine on the lower horizontal members. The top tube is straight and inclined, at the rear end there is a wide casting which forms a saddle for the two quarterelliptic springs. A substantial web is embodied behind the steering head.

The Ayres-Layland flat twin outfit, fitted with duplex spring frame.

A feature of the spring frame is the fact that the upright fork over the rear wheel is rigid with the chain stays.

MOTOR (YCLE

which latter carry the gear box. How the gear box and the quadrant is taken up is not clear, but as we are offered a trial on the machine at any early date, this matter can be dismissed for the present.

Long links hang from the vertical fork cross bar, and to these the springs are shackled. It will be noted that the springs, although horizontal on the saddles, are inclined upwards to the shackles. This construction apparently has been chosen in order to give a low saddle position without having to embody especially long links.

Large aluminium footboards are carried on transverse tubes extending right across the frame, and the mudguarding problem has not been lost sight of. The valances of the front guard are turned out at the bottom, and should prevent mud reaching

the front cylinder.

The large tank is of the saddle type, completely enclosing the top tube, and altogether the machine, which is equipped with Sturmey-Archer gear, Brampton forks, and Wood-Milne 650×65 mm. tyres, appears to be a very attractive proposition. The makers are the Viaduct Motor Co., with works at Broadheath, near Manchester.

Construction of the duplex

frame suspension.

Douglas Pattern Capac Carburetter.

N exceedingly neat adaptation of the Capac carburetter has now been brought out for Douglas motor bicycles.

Known as the DM type, the particular Capac under consideration has the jet at the point of maximum air velocity, and inclined to the entering air stream.

The Capac fitted to a 24 h.p. Douglas, showing hot air intake directed from the exhaust pipe.

The control of the jet size by means of a tapered needle and the new fuel range jet control are standard fittings on this model. The throttle is of the piston pattern, and forms the housing for the jet, the size of which is controlled by the tapered needle. A special form of dome is fitted to the air mtake in order to keep the choke tube in place. Alteration of the size of the choke tube is rarely necessary, the carbu-retter being sent out with the correct choke tube for either the 21 h.p. or 4 h.p.

The principle on which this model Capac works is that as the throttle is opened, the air, as it enters, is directed to a greater or less degree across the top of the conical jet, part of the air passing to the lower end through the slot in the piston throttle, and part being taken directly under the piston to the engine side of the throttle as this is opened. The angle of the slots and the angle of the jet are not equal, and therefore, as the throttle is opened, the passage at the rear of the jet is increased in size, and this in combination with the inclination of the jet to the entering air stream is one of the principal factors controlling the automatic working of the carburetter.

An important improvement is the method of heating the air intake by drawing the supply from a hot air muff round one of the exhaust pipes, to the

vaporising chamber.
The Capac Co., Ltd., 2, Woodstock
Street, Bond Street, London, W.1, issue
special instructions for fitting these carbu-

The D.M. type Capac carburetter which is specially designed for Douglas motor cycles.

T.T. Races—Isle of Man

Special Arrangements with the Auto-Cycle Union for the convenience of Members.

1.-For those taking their Machines to the Island:

Petrol collection to avoid wastage and risk of Fire. On the Landing Stage opposite the Isle of Man Steamers, and an hour-and-a-half before each day boat is due to sail, I. Blake & Co. will have a staff and collection van in . attendance. Petrol will be drawn off from the machines, measured and stored, and a voucher ticket for the quantity given in receipt. On returning from the Island it will be necessary simply to send a postcard to J. Blake & Co., 110, Bold Street, Liverpool, giving them particulars of date and time of return, name of boat, and quantity of Petrol due—it will be on the Landing Stage ready.

2.—For those coming to Liverpool by road and desirous of avoiding the trouble and risk of damage incurred by taking their Machines on the Boat to the Island:

A Garage within easy reach of the Landing Stage, spacious and stone-floored, capable of storing 500 machines, will be available at a nominal charge. This is situate on the corner of Laurence Road and Wellington Road, facing Gainsborough Road, immediately between Smithdown Road and Wavertree Road, and the attendants at the garage will advise the quickest route to the Landing Stage by 'tram or 'bus close at hand. This garage which is being managed for the Auto Cycle Union by J. Blake & Co.—will be opened from Saturday 12th to Monday 21st June,

3.—For those who are prevented from attending the Races:

By courtesy of "The Motor Cycle" telegrams will be displayed in the window of our Bold Street, Liverpool, Showrooms showing the progress of the Races at every Stage.

A.C.U. Members everywhere are invited to fully avail themselves of these facilities.

BENETFINKS, 107, CHEAPSIDE

Read the following:

Dear Sirs.

It may be of interest to you to hear that the three machines that we entered for the recent London to Edinburgh Reliability Trial, and all of which reached Edinburgh to time without any mechanical trouble, had their rear wheels fitted with your Puncture Proofed Tubes. During the run, none of these machines experienced any tyre trouble whatever, notwithstanding the fact that one of the machines arrived at Edinburgh with a large piece of steel deeply embedded in the rear wheel. We enclose the piece of steel-referred to, as it may be of interest to you.

As far as we are concerned, this run has absolutely satisfied us that your tubes are a very necessary fitting; and, in fact, had this particular machine been fitted with an ordinary tube, it would have been punctured, and, considering the time it would have taken to replace the tube, this machine certainly would not have been able to reach its destination to time.

Yours faithfully,

Now send for further particulars to

BRANDISH PATENT

Aluminium Footboards for Triumphs

No Triumpo motorist is complete in his equipment unless his mount is bitted with these footboards.

No wood and pressed tin work—all boards beautifully cast in solid Aluminium, and sent out complete with all fitments.

Any man with the brains of a child can fit these with one spanner in tive minutes; so don't sit and think it over, just send 34/6, and 1/6 carriage.

Money returned in tall if you are in any way dissatisfied.

The Junior T.T.

EFORE our next issue is published the Junior Tourist Trophy will be run and over. Those who are really interested in the future of the light motor cycle will be busy absorbing the lessons of the race, and the attention of the public will be transferred

to the Senior event.

Undoubtedly the future of lightweight motor cycles is rosy, for there is an enormous and ever-growing public which will absorb as many first-class lightweights as can be produced in this country. There are two main stages in the development of the ideal lightweight for popular use: first, the evolution of a small engine with suitable transmission capable of withstanding heavy duty over prolonged periods; secondly, the adaptation of this unit to simple production methods and its installation to a light, weather-proof two-wheeler of a popular price. It is an incident in the first stage which is attracting so much interest at the present moment, for, though enormous progress has been made during the past few years, the public have yet to witness a demonstration of really high-speed work over long distances by the latest designs.

Junior v. Senior.

It has already been prophesied that the speeds of the winning Junior will be within measurable distance of the best Senior times, and one firm has very sportingly entered the Senior event with a Junior machine which will provide the public with a means of comparison of the performances of engines of 350 c.c. and 500 c.c. capacity racing on equal terms.

The long-distance speed event for 250 c.c. engines is a novelty designed to encourage genuine lightweight machines, and The Motor Cycle Cup for the best performance by a 250 c.c. machine makes a third trophy in the races. Incidentally, keen competition is promised for this trophy by riders of machines of different types, i.e., two-strokes and four-strokes, and undoubtedly much valuable data will be obtained which will have great influence upon the development of the miniature motor cycle for the million. The racing machine of to-day is the parent of the touring machine of to-morrow.

Where are the Scooters?

QUESTION frequently asked is the above. Let us admit it—the scooter has hitherto proved a disappointing proposition. Past history has shown us that premature booming of any untried design is bound eventually to react to its disadvantage. We have the case of the cycle car fresh in our memories. A year ago we were told that scooters would revolutionise power-propelled bicycles. They were to be produced and sold in thousands at £25. The Motor Cycle was not led away by false optimism to join the throng, but, instead, personally tested the various examples produced, and found them wanting. Believing a comfortable seat to be a sine qua non of any mount intended for general use, and feeling that a satisfactory and practical miniature motor cycle might be developed from the scooter, we inaugurated a campaign in favour of a seat and the development of a lightweight motor cycle. We still feel that there are great possibilities in this direction, and the small class in the Junior T.T. Race will assist in producing the ideal design. Manufacturers, particularly those firms new to the industry, will be well advised to cultivate the genuine miniature motor cycle (preferably with an open frame to render it suitable for the use of ladies or gentlemen), having a comfortable seat to enable reasonably long distances to be covered, and preferably with an emergency gear for slow hill-climbing. A general utility machine of light weight, at a low cost, is the desire of thousands of potential buyers among the ranks of cyclists who find pedalling too hard. Speed in this case is not desired.

HO will win the first post-war Junior T.T.? With only thirty-two entries, it would appear to be an easy matter to get reasonably near the mark in prophecy, but when one starts to analyse the entries the task becomes more difficult.

the task becomes more diment.

Michael Kirk, who usually acts as the motor cyclists' tipster, considers that a forecast of the Senior event will keep him sufficiently busy this year, and his effort will appear in next week's issue; consequently the Editor has commissioned the writer to pick the winner. "You have seen the machines, you know the men, you have followed the speed events since the war—get busy," he said, and left hurriedly to catch the boat train to the Isle of Man.

I am told by friends who follow horse-racing that the only sure way to pick the winner is to back all the starters; but by examining the list of entries for the Junior T.T. one naturally fancies men with T.T. experience and machines known to be good for the distance, and especially a combination of the two.

The Race for "The Motor Cycle" Cup.

It is rather disappointing that more firms have not entered in the 250 c.c. class, but the two who are competing. i.e., the makers of the Diamond and Levis machines, are "all out" to win The Motor Cycle Cup. It will be a race between two-stroke and four-stroke, and both firms are confident of success. Representative machines of both-makes have appeared in speed trials. Milner, who is entered on one of the larger Diamonds, rode a 250 c.c. model at Storeton on the 15th life and attained a good of the Storeton on the 15th ult., and attained a speed of over 65 m.p.h.; while Pugh gave the new Levis engine a try-out at Weston-super-Mare two weeks previously. The engine had only been put in the frame the evening before, and, so far as the public is concerned, very little is known of the new engine. Without doubt it is considerably faster than anything the Levis factory has ever turned out, and, what

is more, it seems impossible to dry it up.

The Diamond four-strokes have overhead valves, and Milner proved that they are faster than any engine of the Affiner proved that they are faster than any engine of the size that has appeared in public competition. Speed is not everything, however, and, other things being equal, I would rather place my money on an engine that has the fewer parts when it comes to a T.T. race.

As for the competitors, well we have experienced T.T. riders on both makes. In the last Junior both Milner and plike yells Lavis mosphing. Lavislantilly, Wilner's weeking.

Pike rode Levis machines. Incidentally, Milner's machine weighed 188 lb. complete—the lightest mount in the race. He failed to finish, but Pike finished thirteenth, his fastest lap being 49.32 m.p.h., and his average over the race was 39.9 m.p.h., as against 45.6 m.p.h. of the winner. This year both are riding Diamonds. The D.F. and M. Co. with Pike and another good rider up should stand a chance, provided the machines can stay the course.

reviewed.

of the Levis team, I favour Kuhn, although he has previously competed in a T.T. He is as hard as na and is of a temperament that makes for success in a test endurance. R. O. Clark, who is riding a similar machishould not be overlooked. He is an experienced rider,

should not be overlooked. He is an experienced rider, a in 1913 he broke nine long-distance records in the 275 class, five of which stand to-day. Any man who can me a little four-stroke single for six hours and average 4 m.p.h. should prove a formidable competitor.

Who will win The Motor Cycle Cup then? In the write opinion, the decision will rest between Pike (Diamon Kuhn (Levis), and Clark (Levis). Personally, I far Kuhn, because mechanically the chances are in his favo as it must always be in favour of the man riding a mach with only three moving parts in his engine. But, on other hand, should the Diamond win, it would show t the small o.h.v. engine has reached a degree of perfect which few people at the moment appreciate.

The 350 c.c. Class.

That speeds very near those of the Senior event will attained in the Junior race is a foregone conclusion, a among the riders of 350 c.c. machines there are particula "hot-stuff" T.T. men. These include T. H. Hadda (A.J.S.), H. R. Davies (A.J.S.), Eric Williams (A.J.S.) J. S. Holroyd (Blackburne), A. H. Alexander (Dougla on Friel London (Director)) and Eric Longden (Dot-Jap).

Now, Haddock has had a fall in the practising, and it doubtful whether he will ride. H. R. Davies tied second place in the last Senior event, when his speed only 1.10 m.p.h. slower than the winner; while E Williams is the present holder of the Junior Trophy. The two riders are first favourites for the Junior race.

J. S. Holrovd is an old Motosacoche rider and knows t course, although on previous form the little Blackburn are more likely to distinguish themselves by a faggregate performance than by sensational speed work. fact, it is not improbable that an effort will be made secure the team prize as a proof of reliability.

A. H. Alexander was third in the 1913 Senior event, a is probably one of the most experienced riders on tocourse; while Eric Longden rode, a Douglas in the le Junior race.

Now, in addition to old T.T. riders, there are many w have proved that they can use their heads, but, consider n conjunction with their machines, it is difficult to spot

likely winner amongst them.

For example, the Wooler by its recent twelve how records has proved its ability to "stick the distance"; t new Ivy two-stroke is reputed to be particularly good f the job; while the Douglas machines, although not official entered, are not to be overlooked, since in 1912 they to first and second place, and in 1913 second place, and ha always been well in the running. There are some da horses in the new Diamond machines. This concern h four types of engines in use, and the practising will be form of elimination to find the best. These types inclu-both single and twin engines, but all are fitted with over head valves in one form or another. All the same, I thi if I were betting on the Junior T.T. I should only hesita when it came to choosing between Eric Williams and H. I

To summarise, then, I favour a Levis for the 250 c. and an A.J.S. for the 350 c.c. classes respectively.

THE MAKE-UP OF

By "ROAD RIDER." A T.T. RIDER.

The Physical and Temperamental Composition of a Tourist Trophy Winner.

In the early days the T.T. might be won—and sometimes was won—by a rider of quite ordinary calibre. Few machines were entered, and fewer still finished. The great thing was to get hold of a mount which was staunch enough to finish. If it could cover the course without giving its jockey any trouble, it need not be ridden so very fast to win outright. The taking of fiendish risks round corners, and the attainment of track speeds on rough roads of no great straightness, were not essential unless a few petty stops had cost the rider much valuable time; indeed, it was a strategic blunder to drive the machine hard, for it could not stick the pace.

In most of the earlier races we regularly saw a few dashing youngsters put up a meteoric display in the first lap, or possibly the first two laps. Then they disappeared from the race. Either the machine had collapsed beneath them, or a control had failed them in a critical emergency. "Ca campy" was the passport to victory so far as the opening stages were concerned, though a fierce tussle occasionally developed in the closing laps, if two or three steady goers found themselves running neck and neck on time.

All that is altered now. The T.T. bicycle is a fundamentally different proposition from its ancestors. To commence with, it is a great deal too fast for the course; many of the entrants could probably do their seventy miles in the hour on Brooklands, but an average of fifty is good enough to win in the Island. Secondly, about a half of the entry will hope to accomplish non-stops, except for the inevitable replenishment stops. Provided a rider has readied his machine with meticulous care, he need hardly fear any stoppages except punctures; and the special tyres which the manufacturers turn out for the T.T. do not often let the riders down. Trouble en route is generally the result of carelessness in preparation; or of a petty crash in the race; or of a momentary carelessness in lubrication; or of a clumsy gear change in a moment of paralysing dread or intoxicating excitement. Half the entry can count with tolerable confidence on a no-trouble race.

The Importance of the Jockey.

It follows from all this that each year sees the importance of a first-class jockey overshadow the intrinsic excellence of the machine. Given perfect handling, several makes of motor cycle are capable of registering the speed demanded for victory. The racing managers of most teams can be trusted to produce a bicycle which can win. Their main anxiety is to discover a jockey who will enable the machine to give of its best.

Oddly enough, pluck is not the first requisite in the make-up of a T.T. winner, perilous as the game is. There is a certain intoxication about speed. It

turns you "fey," as the Scotch put it. Start scrapping with a few clubmates, and you will feel windy at the first corner or two, but within ten minutes you will forget to be frightened. In the T.T. the magic of the occasion, and the zest of the race, banish the icy tremors of the wait at the start almost as soon as your engine fires; and fear promptly disappears until an impending crash or sheer weariness restores the sensation. If you feel any fear after the first mile has been covered, you are too old for the job. The first requisite, therefore, is not to feel too "fey." Bits of the course which look straight at touring speeds assume a fearful resemblance to a corkscrew when the 'bus is "beating fifty." A dust-cloud behind and a roar astern urge you on. The tendency is to fling sense and caution to the winds, to become literally drunk with the champagne of the occasion, and the delirium of speed. Either you will tackle a corner too fast, or you will rack the machine by exaggerated brakework.

Judgment and Nerve.

Excitement is heady stuff as long as the body is fresh. Caution, rather than dash, is the prime need in the opening lap. If the man is made for the job, and is trained to the hour, a quarter of a lap will clear his brain and steady his nerves. After a mile or two he will be driving subconsciously, taking every corner better than he ever did it in practice, timing his accelerations and his brakework to a hair, and all without any perceptible thought or mental effort, just as George Duncan golfs or McCudden fought on one of his golden days. No sensation is more glorious; but in motor racing it comes only to the young, and not to them unless they are in perfect physical tune.

The second lap may threaten to impair the perfect harmony between brain and body; the third lap will almost certainly disturb it. Fifty miles an hour over rough and dangerous roads, accompanied by intense mental effort, is inconceivably exhausting. The youngster may last three laps without having to pull himself together; the veteran will generally face his bad time towards the middle or end of the second lap. This does not mean that his riding will necessarily fall off in quality. It means that the conscious effort will grow increasingly pronounced. With some men the change is evident in a spice of carelessness—their line at corners is less certain, their grip on the steering tends to relax, their brakework is less perfectly timed and more abrupt, and their acceleration is rougher or later.

With another man fear begins to reassert itself. He grows timid, and has to press himself to keep the speed as high as it was in the opening laps. He may grow worried and irritable, especially if slower

The Make-up of a T.T. Rider .-

and clumsier reen baulk him; and temper is a rare disruptive of that perfect internal concord which alone renders maximum speed possible on such a course. All these possibilities are a question of stamina, which is temperamental as well as physical. It is here that the sprint-merchant lets his stable down. If I see a man going great guns at the half-distance and particularly if he is perfectly genial while some duffer slows him down at such a corner as the Ramsey hairpin, I know he is going to show up well.

In the concluding laps comes the supreme test of all. The dud machines and the dud riders have already been weeded out. The tension on brain and body has reached its zenith, for the first three laps imply a nervous output sufficient to exhaust anybody but an athlete in the very pink of training. Now that rivalry has touched its summit, and the rider feels more like bed than anything else, the signals of his helpers tell him where he stands, and call upon him

for gigantic efforts.

The Last Lap.

At this stage there may be some lucky man who has already established a commanding lead; it is signified to him that he has five minutes in hand of the field. Fools envy him. Wise men pity him. His hearts' desire is within his grasp, and the tiniest error of judgment, the pettiest caprice of the fickle goddess of fortune may rob him of his dream.

He has to steel his nerves against a sickening anxiety which can easily make him corner like an elderly novice on a baby two-stroke. Or, alternatively, the wine of success may mount to his head and betray him into taking all sorts of illegitimate risks. Never in the race was it more essential that he should display an inspired blend of dash and coolness. Iced champagne should be the beverage suggested by his roadwork from now onwards to the finish.

An even sterner task lies on the little clump of men who are a few minutes behind the leader. Just when they are wearying to the point of exhaustion, numbed wrists, aching back, smarting eyes, and tired brain, comes the summons to dig up a little more speed from somewhere. Already they have been cornering as fast as they dare. Already they have been humming down the slopes and the straights as if hell were behind them. Their exact position they do not know. But the signals seemed to say that if the last two laps could be reeled off just a few minutes faster, victory might yet be the prize. Three minutes per lap seems a triffe. Just you try it. It means snatching a second by piling on pace and shutting the throttle a second later in the approach to each of the several corners. It means adding five miles an hour to the speed down every fast bit.

Trifles, you think? This last desperate appeal to a tired man is asking much. Probably, too, the 'bus tiself is beginning to feel the strain. You cannot trust it after this frightful four hours of bucketing as you could trust it in the first lap. The 'bus smells of heat. There are audible loosenesses and rattles about it. The very brakes feel sloppy—will it save time to night the 'bus and tighten anything up? The man who rides a stern chase to triumph in the last two laps

is the finest fellow of them all,

TYPES OF ENGINES IN THE T.T. RACES.

A LTHOUGH there is the possibility of changes being made at the last moment, the types of engines specified on the official list of starters (given on page 638) provided matter for an interesting analysis. According to these figures only one V twin is in the Junior—the Dot, which is fitted with a new 350 c.c. twin of J.A.P. design—an overhead valve engine embodying several novel features. It is quite possible that this engine may also be used by another firm who have entered singles.

In the Senior event five V twins are entered—i.e., the Indian Scouts—and in view of past victories of this type of engine and the solitary win (1914) of the single, it is perhaps surprising that the former has apparently

lost its popularity with T.T. aspirants.

The Singles.

In both Junior and Senior races single-cylinder fourstrokes predominate, there being sixteen out of thirtytwo in the Junior event, and twenty-one out of twentynine in the Senior. These include the following makes:

JUNIOR: A.J.S., 8; Blackburne, 3; Diamond, 5. SENIOR: Norton, 14; Sunbeam, 5; A.J.S., 1; Duzmo. 1.

The last-mentioned machine is the only four-stroke single in the Senior event with an outside flywheel.

Two-strokes.

This year there are no two-strokes in the Senior race. Despite the past successes of the Scott, there have been no private riders forthcoming to represent this mount when the makers decided not to race.

In the Junior race, however, there are eight twostrokes: four Levis, one Ivy, one New Comet, and two Aurora; the last-named machines are fitted with Dalm engines, and the New Comet has a Climax power plant—a newcomer to the two-stroke world.

Flat Twins.

In view of the Wooler's recent successes in long-distance record breaking, it is not surprising to find several machines of this make in the Junior race, while, despite the decision of Douglas Motors, Ltd., not to compete, there are several of the famous Bristol machines entered by individuals. The following are the flat twins in the Junior: Wooler three, Douglas four. In the Senior one of the new 3½ h.p. Douglases will compete, as will two A.B.C.'s. From the above, it will be seen that the racing will have four-aspects of interest: (1) the races themselves for the blue ribands of the motor cycle world; (2) type against type; (3) competition between rivals on identical machines; and (4) machines of similar types against each other. In the latter connection, it is interesting to group the rival machines as under:

Two-strokes in the Junior: Levis, Ivy, Dalm, and Climax.

FOUR-STROKE SINGLES IN THE JUNIOR: A.J.S., Diamond, and Blackburne.

FLAT TWINS IN THE JUNIOR: Wooler and Douglas. SINGLES IN THE SENIOR: Sunbeam, Norton, Duzmo, and the little A.J.S.

FLAT TWINS IN THE SENIOR: Douglas and A.B.C.

Useful Information for the T.T. Visitor.

Sailing Arrangements, Customs, Fares and Garage Facilities for Visitors to the LO.M.

Sailing Arrangements.

OR the benefit of readers visiting the Isle of Man for the races, we repeat the sailing arrangements given in last week's issue. The sailings are as follow:

FROM LIVERPOOL.

To-day (Thursday, June 10th) and Friday, June 11th, 11.30 a.m.

Saturday, June 12th, to Wednesday, June 30th, 10.30 a.m.

and 3 p.m.
Extras. Thursday, June 17th, 1 a.m.
Saturdays. June 12th 4.5

26th, 12.50 night.

RETURN SAILINGS FROM DOUGLAS,

To-day (Thursday, June 10th) and Friday, June 11th, 9 a.m.

Saturday, June 12th, to Wednesday, June 30th, 9 a.m. and 4 p.m.

Extras. Thursday, June

Extras, Inursuay, June 17th, 12.30 night, Mondays, June 21st and 28th, 12.30 (Sunday miduight).

- 'Customs.

So far as Customs are concerned, the I.O.M. is considered by Great Britain as a foreign country, and a permit to ship must be obtained by every motor cyclist who desires to bring his machine back to England. This is merely a means of identification by which the Customs official at Liverpool may see that the machine has only been taken into the Island quite recently.

The procedure is quite simple in the case of Britishmade motor cycles, but foreign-made motor cycles entail further complication. A form prior to departure on form prior to departure on the home journey should be taken to the local consul of the A.C.U., Mr. G. J. A. Brown. 39, York Road. Douglas. During the race week, the form should be taken to the offices of the A.C.U., Athol Hall, Athol Street, Douglas, I.O.M.

Fares for Man and Motor Cycle to Douglas I.O.M.

The following fares for passengers and their machines between Liverpool and Douglas, I.O.M., will be of interest to our readers : Single saloon 14s., steerage 7s. 6d.; return for six months, saloon 20s., steerage 12s. 6d.

The fare for a motor bicycle accompanied by passenger is 4s. 6d.; a motor bicycle with two seats, 5s. 6d.; a motor bicycle and sidecar accom-panied by_passenger, 7s. 6d.; a motor tricycle with passen-ger, 7s. 6d.; 2s. 6d. per seat extra if more than one seat is fitted.

Sidecars must be detached from motor bieveles when conveyed by passenger steamer and in charge of the owner,

At Liverpool.

For members of the A.C.U. taking their machines to the Island, arrangements have been made with J. Blake and Co., of Liverpool, who will be in attendance on the landing stage to empty tanks. Receipts for the amount will be given, and tanks will be refilled on return. If desired, machines can be left at the A.C.U. garage, the Drill Hall, on the corner of Lawrence Road and Wellington Road, Liverpool.

AN IMPRESSION OF SPEED ON THE T.T. COURSE. The greatest speeds are obtainable on the mountain road. 70 m.p.h. is frequently attained during the Tourist Trophy Races.

ANNOUNCING THE T.T. RESULTS.

"The Motor Cycle" Telegram Service from the Course to the Centres of Motor Cycledom.

As in former years, The Motor Cycle has arranged for telegrams from the course to be exhibited at the different important centres throughout the These wires will give the order country. at the end of each lap-a method which has proved most popular in previous T.T. races.

Below we give a list of points at which

A.J.S. MACHINES FOR THE T.T.

Four-speed Gears applied to Sturdy Machines having High Efficiency Single-cylinder Engines.

CONSIDERABLE interest will be taken in A.J.S. machines which bearing in A.J.S. machines, which, besides defending their title in the Junior Race next Tuesday are the only 350 c.c. engines entered for the Senior event.

Frame, gear box, forks, and brakes, are A.J.S. standard practice, but the engine and certain features of the transmission are new. The single-cylinder engine has a bore and stroke of 74 × 81 mm. respec-tively. To all intents and purposes the crank case is standard, but steel flywheels are used and the cast iron cylinder has a detachable hemispherical head in which overhead valves are mounted inclined from the centre line at approximately 45°.

These valves are operated through standard timing gear and long push rods,

The cylinder head of the A.J.S. is held down by a steel strap,

and oil is supplied by a handle-bar controlled pump from a tank behind the saddle tube.

ous, as it is held down by a flexible steel strap passing over the head of the engine and tightened by turnbuckles on either side of the crank case.

Unorthodox Transmission.

A very light steel piston is employed A very light steel piston is employed having two rings at the top and a series of oil grooves, the lower part of the skirt is copiously drilled. The transmission from the engine-shaft to the gear box is some—what unusual, two equal sized sprockets are machined on the clutch ring, and mounted loosely on an extension of the crankshaft are two sprockets which differ slightly in size. Either of these sprockets may be dogged to the shaft at will, a control being operated from the handle-

perated from the handle-bar. When the smaller of these sprockets is being utilised for the drive, the normal high and low gear are ob-tained by means of the countershaft gear box, but the larger sprocket can be used for long descents, and gives slightly higher ratios so as to prevent over-runing the engine. The saddle tank contains two gallons of petrol, and the entire oil supply is carried in a tank behind the saddle tube. A somewhat unusual method of filling this tank is employed, since a large diameter pipe is carried upwards through the petrol tank so as to bring the filler cap into a normal and easily ac-

bar, the flow being reguthe race

From the illustrations, it will be noticed that the cylinder is stayed to the front down tube. The machine is fitted from down tune. The machine is likely with Brooks saddle, Amac carburetter, Hans Renold chains, Dunlop tyres, and Thomson-Bennett large size magneto. It is a most workmanlike mount, which

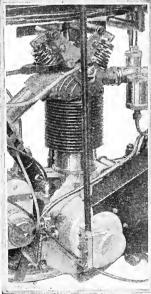

has been designed rather with the idea of a high efficiency machine which will stand up to the work than with the idea of saving weight.

A Sporting Chance.

There is no doubt that the A.J.S. stands an excellent chance of retaining its title, since there are few machines which have been so thoughtfully designed and well-constructed. It is unfortunate, therefore, that T. H. Haddock and N. C. Heath—two of the T.T. riders of this model should have suffered accidents during Whether these preliminary practice. Whether these accidents will prevent their riding in the race is not certain, but we understand the A.J.S. firm have other good riders in reserve.

. That one of these machines has been entered in the Senior event gives the A.J.S. a sporting chance of winning both events; in any case, its performance in competition with machines of 30% larger capacity will be watched with great interest

cessible position. Lubrication is effected by a spring pump con-trolled from the handlelated by a sight feed drip. It is just possible, however, that this drip will not be used during

Driving side of the T.T. A.J.S., showing the housing for the engine shaft gear and the inclined overhead valves.

At first glance the Redrup is not unlike a rotary engine that appeared a decade ago.

In the early part of this year (to be exact, in our issue of February 5th, 1920), we gave a fully illustrated and exclusive description of the Redrup Radial engine. At the time of our inspection of the engine, a machine was not available, but a test model has now been assembled and a prolonged road trial carried out. Our readers will no doubt remember that the engine is manufactured by Messrs. Boyle and Redrup, of Leeds, and considerable numbers have already been used for stationary work, such as driving pumps, electric lighting installations, and blowers.

We need not describe again the construction of the engine, but we may briefly remind the reader that three cylinders, disposed at 120° angle, are used, and a single-throw crankshaft, aluminium pistons, mechanical lubrication, and completely enclosed valves and valve gear are incorporated.

The machine which we tested was not specially prepared for us, and it had just returned from a 500 mile trip into Wales, after which it was placed in our hands without any adjustments being made.

At the outset we were favourably impressed by the manner in which the engine responded to a single depression of the kick starter. Although the machine had been standing all night in a very exposed place, and despite the fact that the morning was wet and cold, the engine fired at once, and after a few minutes' running, it became absolutely

R_{oad} Tests of the Redrup Three-cylinder Engine Described.

A Vibrationless, Easy Starting, and Flexible Power Unit for Motor Cycles.

controllable—ticking over as slowly as desired or responding to full throttle without hesitation; it was noticed, however, that until a few miles had been covered the full power was not developed, and it seemed necessary that the engine should reach a certain temperature before pulling its best.

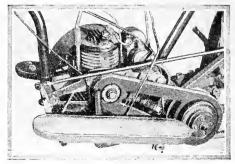

Before starting on the journey from Leeds' to Coventry, a hill of 1 in 7, a hundred yards in length, was climbed on low gear of 11 to 1 with a passenger on the carrier, the total weight being 21 stone. This is an excellent performance for a machine of only 309 c.c. capacity. Features particularly noticed while handling the machine were its continuous torque and absence of vbration.

Smoothness of Running.

Without desiring to appear unguardedly eulogistic, we may truthfully say that the writer has never ridden any motor cycle which so nearly gave the impression of continuous free-wheeling on a pedal cycle. The engine was remarkably silent, as, owing to the valves and valve gear being completely enclosed in the cylinders, no noise from these parts could be heard; the exhaust gave a regular and subdued note. The most prominent sound associated with the engine was a continuous and even ringing of the steel-fly-wheel; this, however, was not at all objectionable.

During the day 130 miles were covered, but no

attempt was made to do the distance in any set time. Over given stretches of road, however, timing was carried out, and it was found that on the level 40 to 45 m.p.h. could easily be reached. Thirty miles per hour could be maintained indefinitely, and on one deserted stretch of the Great North Road ten miles were done in exactly. nineteen minutes. Immediately after this, the low gear was engaged, and one mile covered at half throttle, the speed being in the neighbourhood of 20 m.p.h. Despite this ill-

Transmission side of the Redrup power un.t. The engine is secured in the frame by light steel bearer plates, and can be tempored completely by the withdrawal of two bolts

A Radial on the Road .-

treatment, however, the engine showed no signs of drying up, and it then accepted the high gear without any evidence of distress.

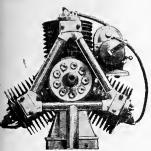

Since our previous description of the engine, a few modifications have been made; for instance, a separate Best and Lloyd lubricator has been titted, which feeds oil directly to the crank and big end bearings, while the mechanical pumps in the timing gear on each side of the engine maintain constant lubrication of all the parts. . The speed of the magneto has also been reduced to threequarter engine speed by introducing another roller in the "sun and planet" form of high-tension distributer, and the magneto. transmission is now taken from a sprocket fixed behind the fan flywheel.

Reliability and Economy.

Throughout the entire run the only involuntary stop was due to the carburetter having become choked with aluminium paint washed out of the tank, which was a new one. As the carburetter can be dismantled by the withdrawal of four screws and a union, the delay was only of a few minutes' duration: otherwise, in every respect, the machine ran faultlessly.

The petrol consumption worked out at 100 m.p.g., but there is reason to believe that this could have been improved upon, as the mix-

ture appeared to be rather rich; no doubt a smaller jet would have improved matters. Altogether we were very much impressed by the performance of the machine. The Motor Cycle has advocated the adoption of the radial principle many times in the past, and it was with considerable interest that we availed ourselves of a long run on the machine, and our belief in the possibilities of the type has been greatly enhanced by the satisfactory running of this particular engine. It would appear to be capable of great degrees the satisfactory running of the property of the satisfactory running of the satisf

The 3 h.p. (309 c.c.) Redrup three-cylinder radial engine

At the end of a 130 mile test, during which the engine ran almost faultlessly.

velopment, especially in the . direction increased size. The complete absence vibration, the silent running, and smooth torque should do much to extend the popularity of the motor cycle.
The even torque especially should

go far towards the elimination of tyre and transmission troubles; indeed, as far as chains are concerned, these, if properly enclosed, should last indefinitely, as the inevitable snatching associated with most other types of engines is entirely absent in this particular instance.

Some Details of the Machine.

Although Messrs. Boyle and Redrup are concentrating on the manufacture of engines, and do not propose to build a motor cycle, some details of the machine we tried must be given.

The frame is a standard one, which has been slightly altered to carry the Redrup engine. It is fitted with Saxon spring forks (which, incidentally, are decidedly efficient), and a Burman two-speed gear box with clutch and kick starter. The engine is carried between light steel plates, much in the same way as radial aero engines are supported.

The magneto is mounted on a bracket behind the vertical cylinder, and a similar bracket at the front of the crank case will conveniently accommodate a small lighting dynamo, if such is required.

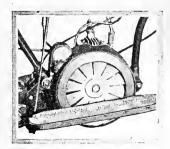

The two lower cylinders are somewhat exposed to mud splashes from the road, but owing to the cooling effect of the fan flywheel with its cowl, an undershield can be fitted without causing overheating. The float chamber of the carburetter is

bolted on to the crank case immediately below the driving sprocket, and the jet, choke tube, and throttle are surrounded by the oil sump, which is quite warm and consequently conducive to good carburation.

Unlike many ultra-modern engines, the Redrup Radial does not appear to be hard on plugs, while the extremely light valves and springs should also give long service, especially when it is recollected that not a single portion of the valve mechanism is exposed to the dust-laden atmosphere.

The makers have very great faith in the engine, and this has been justified so far by the fact that throughout the tests which have been, carried out, no spares have been carried nor have any as yet been

called for.

Fan-flywheel and cowl, which almost completely concea. the cylinders.

Spring Frames v. Rigid.

THEN you are well accustomed to spring frames, it is apparently difficult to do them justice. Ownership of the new A.B.C. is rather a nuisance in one way, as everybody one meets begs a ride; no doubt other owners of new machines just commencing production experience a similar sehwärmerei as the Hun calls it. Yesterday I gave trial trips to a couple of old hands, neither of whom had ever. tried either a spring frame, or the next best thing, viz., a combination of a good fork with 3in. tyres, and an XI-all saddle. I expected these two practical men to enlarge on the gear or the engine. ignored both, and went into ecstasies about the suspension. After a short pillion ride, the driver said the machine was easier to steer with two up than his own 'bus was solo, and the passenger (who had straddled the naked carrier bars) remarked that a cushion was not called for. To others in the like position I commend a triple experiment, namely, that they should cover a roughish bit of road three times:

> Once on their own rigid framed machines. Once on a Scott (3in. tyres, splendid fork, good

Once on a spring frame.

After this experiment they will be in a position to help in stamping the industry down one of the two paths, which it must follow if it wants to make really good.

Brake Control.

TITHOUT desiring to define a motor cycle as a vehicle which is doomed to sustain tumbles, every owner and repairer knows that the average machine takes a mild toss periodically. Such tosses very seldom inflict any serious damage. But for the last twenty years they have normally occasioned the rider concern on two principal counts. The first is where to stow his feet when his footrests are pointing to twenty-five minutes past six. The second is whether it is safe to continue a journey with only the front brake in action. Design has certainly been veneered up a little in both respects. For example, I own a machine the footrests of which are quite usable within five minutes of a real bad crash, since they are friction-held on a vertical tube, and merely need kicking back round it, but the brake pedal of this mount must invariably go west in a tumble. The majority of machines are similar. A ray of hope is dawning on the horizon. I see no reason why Bowden control should not be quite good enough for the internal expanding brakes which are now commencing to appear, and such a good judge as the A.J.S. designer agrees with me. Bowden control will permit of a main brake operated by hand or thigh or knee.

Given a kick-straight type of footrest, no tumble would then disorganise the nether portions of a machine. No, thank you, I have not had a tumble lately, but Ihave seen a few machines which have been doing slides.

Some Chain Notes.

all the chain supplies which I personally require. My first chain note is intended for trade and buyers alike. On some makes of machine the chain is given a very bare clearance along its free top and bottom runs. Thanks to the shortage of spring link clips, some manufacturers have unearthed stocks of the old-fashioned bolt joint links, and are fitting these instead. I hear of several cases in which machines have been delivered with these links, and the tip of the bolt fouled some projection on the machine. Apart from the chance of damage if the engine-is rashly started up, this blunder creates an impression that the machine has never been tested, although in all probability it was tested with an old chain at the works. Secondly, have you ever watched your back chain when you are driving fast? The other night I was fleeing homewards with a setting sun behind and on one flank. I happened to cock my eye at my shadow, which was pursuing me along a bank, and $\hat{\mathbf{I}}$ dismounted in a hurry, for $\hat{\mathbf{I}}$ saw the shadow of my back chain waying like a flag in a gale. I could hardly believe my fingers when a feel showed that the chain had no more than the legitimate half-inch up-anddown sag. But if a properly adjusted chain can waggle like that at high speed under load, I shall be jolly careful never to run my chains slack again. It looked in the shadow picture as if it would fly off at any moment.

Where are the Scooters?

WILL somebody tell a humble provincial what has happened to the scooter? In the teeth of much obloquy The Motor Cycle asserted last year that there was a disposition in sundry quarters to exaggerate its public appeal, and that the average male would, as a rule, find a lightweight motor bicycle better suited for short-distance work. Critical as my own attitude was to the newcomer in its early days, I must say I thought it would catch on fairly well with the fair sex. Scooters generally seem to excite as much amusement as genuine interest in the minds of a sceptical populace. I was told by men who should have known that there would be 100,000 of them on the road by June, 1920, and was looking forward to cadging joy-rides on each make in turn; but they don't seem to be as thick as leaves in Vallombrosa yet. Where are they all?

A SIX DAYS TRIAL IN THE ALPS.

The Mountainous Routes of the French International Six Days Trial in July.

ALTHOUGH termed a six days trial, the French international event, which will take place from July 26th to August 1st, will actually absorb seven days, one of which will be a "rest day" (during which the machines will be exhibited to the public), and two others will be occupied in the homeward run to Paris. The four days in the constitute the real tests, and particulars of the routes on these days are given here, each point being one of the controls, which are approximately 25 miles apart :

r irst Day, Monday, July 26th.— Grenoble, Pent de la Goule Noire, Leoncel, Saillans (replenishment and lunch), Col du Rousset, Pont de la Goule Noire Grenoble. Total, 158.3 miles.

SECOND DAY, TUESDAY, JULY 27TH.— Grenoble, Pierre Chatel, Corps (replenishment), Gap (replenishment and lunch), La Faurie, near Clelles, Grenoble. Total, 145.5 miles.

THIRD DAY, WEDNESDAY, JULY 28TH.—Grenoble, Les Echelles, Le Bourget Annecy (replenishment and lunch), Les Deserts, Chambéry (replenishment), Le Touvet, Grenoble, Total, 153.4 miles. FOURTH DAY, THURSDAY, JULY 29TH.— Grenoble, Les Grands Sables, fork on

road to Galibier, St. Michel de Maurienne (replenishment and lunch), Les Grands Sables, Grenoble.

Entries for the trial close on Tuesday Entries for the trial close on Tuesday next, the 15th, and particulars may be obtained from the Secretary of l'Union Motocycliste de France. 8, Place de la Concorde, Paris, the A.C.U. of France, and should not be confused with the organisers of the "Paris-Nice."

SCENES IN THE DISTRICT WHERE SOME OF THE FINEST MOUNTAIN ROADS ARE TO BE FOUND.

The chief attraction the motor cycle holds for some riders is that it enables him to explore new routes and districts. To those who are ever on the quest for fields and pastures new, the International Six Days Course will make tremendous appeal. The photographs depict—Top-(1) La Grave; (2) Route du Desert; (3) Pont en Royans. Bottom: (4) Col du Lautaret and Rue sur le Galibier; (5) Corges de la Bourne (6) La Chartreuse, Route du Desert,

SILENCE WITHOUT BACK PRESSURE.

IN the issue of The Motor Cycle dated January 29th (page 131), we described at some length a silencer of promising design manufactured by Messrs. Robinson and McNeil, of Napier Road, Wolverhampton.

It may be remembered that the main feature of this silencer is the spiral passage for the exhaust gases to the atmo-sphere, great care having been exercised

to ensure that this passage is of a continually increasing area.

For some weeks past we have been running a $3\frac{1}{2}$ h.p. single-cylinder motor cycle of reputable make, fitted with one of these silencers, and although many speed bursts have been indulged in, together with much full throttle, low gear work, no symptoms of those evils attendant upon the existence of back pressure were

apparent. A noticeable feature was that the engine ran much cooler than when fitted with the silencer originally supplied.

On the silencer tested the exhaust pipes were of copper, which had the effect of effacing that objectionable "ringing" too often heard. We understand that the manufacturers are now in a position immediately to supply silencers to fit all machines

RIM AND TYRE SIZES.

The Old Confusion Remedied by the Adoption of New Standards.

THERE has been in the past a very puzzling lack of uniformity in the matter of the sizes of motor cycle rims and tyres. The sizes marked upon the tyres were only nominal, and varied considerably in the tyres of different manufacturers. Moreover, the tolerances were uniduly large. For instance, as much as a quarter of an inch was allowed between the maximum and minimum circumference of what purported to be the correct rim for a 26in × 2in. tyre. In the more general size of 26in, × 2in, tyre. In the more general size of 26in, × 2in, tyre. In the difference was also ¼in, and the two rims followed one another, as it were, in size, the largest allowable dimensions of the one being equal to the smallest size of the other, the 26in, × 2in, rim varying from 70½in, to 71½in, and the 26in, × 2¼in, rim varying from 71½in, and the 26in, × 2¼in, rim varying from 71½in, they to either of them. Thus, for the same tyres, which, of course, themselves varied to some extent in size, rims differing by as much as ½in, were provided. Small wonder, then, was it that some tyres were so tight that they could hardly be placed on the rims while others were a sloppy fit.

Observation of these figures also brings to light another anomaly. The 2½in. rim was on the average a ½in. larger than the 2in. rim, whereas, if the correct over-all measurements were to be maintained, it should have been 1½in. smaller. Later, 26in. × 2½in. tyres, and even 26in. × 2½in. were made to fit these same rims, and this, naturally, gave a still larger complete wheel. At the same time there existed a 26in. × 2½in. rim measuring from 66½in. to 66¾in. in circumference. If the tyres for this rim were not undersized, a true 26in. wheel would result, but a tyre of 2½in. section made to fit a 26in. × 2½in. rim would be nearly 5in. larger in circumference.

The troubles of the speedometer makers are then easy to imagine, if they were anxious to produce really accurate instruments, as undoubtedly some of them were.

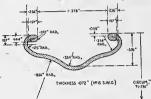

The 1915 Standards.

In April, 1915, the Engineering Standards Committee (Sectional Committee on Automobile Parts), under the chairmanship of Col. H. C. L. Holden, C.B., R.A., produced a new set of standard rims for cars, light cars, motor cycles, and cycles which were in every way reasonable, and contained none of the absurdities to which we have already referred. The motor cycle rims are those which chiefly concern us, though some sidecar outfits and powerful machines are fitted with the light car rims and tyres—a very desirable invocation.

very desirable innovation.

It was no longer suggested that a tyre of 2in, section should be placed on the same rim as one jim, larger, but a special rim having tuhular heads was adopted to

suit it. This, for 26in. tyres, was known as Rim No. C2, and was 71.3125in. in circumference at the bead. For tyres of larger section, 2½in., 2¾in., and 2½in., a rim having turned-over edges and 71.261in. in circumference (22.683in. in diameter) was chosen. This rim is known as No. D2, and has become deservedly popular,

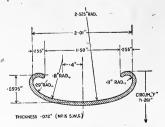

The D2 rim, standardised since 1915 by many manufacturers for $2\frac{1}{4}$ in., $2\frac{4}{5}$ in., and " $2\frac{1}{5}$ in. for $2\frac{1}{4}$ in." tyres.

though, of course, the full diameter of wheels having identical rims and fitted with tyres of different section must vary to some extent.

Unfortunately, however, owing to the war, these standards did not come into general use in the way they would have done in happier circumstances, and many machines fitted with rims and tyres of the old standards are still upon the roads, causing riders to wonder why, when two tyres are marked as being the same size, one will fit a rim snugly, while the other is far too big or too small as the case may be.

Further, a 650 × 65 mm, tyre, though practically identical in size with a 26in. × 2½in. tyre, will not fit the same rim, owing to the size and shape of the bead and rice versa. An explanation of this (with sketches) can be found in "Motor Cycles and How to Manage Them," published from these offices.

A new rim, No. B.B., suitable for $26\text{in}. \times 2\frac{1}{2}\text{in}.$, $26\text{in}. \times 2\frac{1}{2}\text{in}.$, and 659×65 nm. tyres. This is recommended as a standard, and may possibly come into general use.

The Latest Standards.

Later, the urgent need of reducing the large number of sizes of tyres in use on automobiles of all kinds was recognised by the British Rubber Tyre Manufac turers' Association, and a scheme was suggested by them and submitted to the British Engineering Standards Association for consideration. This scheme, with certain modifications, and after consultation with the American Society of Automotive Engineers, has been adopted, and thus a further step has been taken in the direction of Anglo-American cooperation.

(N.B.—The tyre sizes given hereafted.)

(N.B.—The tyre sizes given hereafter are nominal, while the dimensions of the

rims are actual.)
For motof cycles 2in. section tyres are no longer taken into account. 24in. ×24in or 600 × 65 mm. tyres require a No. DI rim, which is identical with the similarly named rim of the 1915 Standards. It is recommended that 26in. × 24in., 26in. × 24in., and 650 × 65 mm. tyres should be fitted to rim No. BB. This is of the same circumference as a No. D2, but slightly wider. It is a round base rim similar to

those used on light cars. When these new standards are generally adopted the motor cyclist will be in no doubt as to what tyres he should buy to fit his rims, and this is all to the good; but it will be realised that, so long as tyres of different section are made to fit the same rims, the over-all dimensions of the wheels must vary to some extent, and that speedometers, if they are to be accurate, must be made accordingly. Actual measurement on a machine shows a 26in. × 2in. Palmer Cord tyre to have a diameter of 27in.

THE LENGTH & BREADTH OF THE LAND.

A collection of routes throughout Britain, with interesting wayside notes thereon, gathered together in an improved edition of "The Motor Cycle" Route Book.

The latest addition to the books issued by our publishers, and which form a motor cyclist's library, is the new and entirely revised edition of "The Motor Cygte Route Book." It is a departure from the average road book, for, in addition to main road routes between populous centres, linking up routes, and a useful set of coloured maps covering England, Wales, and Scotlanid in atlass form, items of interest on the main routes are described by the well-known authority on roads, Mr. Chas. G. Harper. A list of ferries (with their charges for motor cycles and cars) and speed limits are also included. The price is 5s. net, of direct from Messrs. Iliffe and Sons Ltd., 20, Tudor Street, London, E.C.4, 5s. 4d.

Next Week.

The annual T.T. and Summer Number of The Motor Cycle.

The Senior T.T. Guide.

Just as this week's issue is a guide to the Junior T.T. Race, so will next week's T.T. and Summer Number he a guide to the Senior event.

New Distinguishing Marks.

Additional index marks have been assigned as follow: TA to the county of Devon, NK to the county of Hertford, ME to the county of Middlesex, and OH to the county borough of Birmingham.

T.T. Fees.

Jack Haslam, the ex-T.T. rider, of Sheffield, writes that he considers the high entry fee is responsible for the comparatively few entries for the T.T. He states that several Sheffield riders would have entered on machines not represented in the T.T. had not the fee been double it was in 1914,

An A.C.U. Yorkshire Centre.

A meeting of prominent North-country motor cyclists was held at York on the 51st ult., at which it was unanimously decided to establish a centre of the A.C.U. in Yorkshire. Up to the present time this section of the country has been looked after by the East Midland Centre of the A.C.U., and Yorkshire motor cyclists have been extremely grateful for the work done. The East Midland Centre will, in fact, carry on till the end of this year, and the Yorkshire Centre will come into being in 1921.

It is interesting to have to record that the misunderstanding which was the subject of the discussion at a recent meeting at Sheffield has now been largely removed, and it was made evident that the A.C.U. had no intention whatever of neglecting the provinces. On the contrary, the A.C.U. Committee were greatly looking forward to the time when the whole country would be divided into centres which would look after the interests of local motor cyclists under the

guiding hand of the ruling body.

Among those present at the metings were Mr. Quinton Xicol, Mr. S. W. Philpott (who successfully established the North-western centre), and Mr. T. W. Loughborough, secretary of the Auto

Cycle Union.

Eye Troubles in the London-Edinburgh.

J. H. Place, who competed in the London-Edinburgh, rode a Dot, not an Indian as stated. He retired at Patterdale, due to trouble with his eyes. Incidentally, eye troubles were not so prevalent this year.

The Flying Kilometre.

When will some of the short distance figures be changed? At present the highest speeds in the various classes stand to the credit of the following riders:

C.C.	Rider and Machine.	M.P.H.	Date.
250	W. A. Jacobs (Singer)	57.65	Apr. 14, 191
275	H. Martin (Martin-lap)	66.42	Ang. 26, 101
350	S. L. Bailey (Donglas)	72.63	Dec. 19, 191

4	S. George (Indian)	82.85	June 14, 191
000,	S. George (Indian)	93.48	May 2, 1914

A Disclaimer.

The Acetylene Arc Co., Ltd., inform us that we were incorrect in describing their generator as the Fallolite. This was done because we were told that the lamp and generator were made by agreement with M. L. Fallot, of Courbevoie (Scine), France, under his French and English patents, and that the lamp was of his special design. The lamp and generator of the Acetylene Arc Co., Ltd., will be known as the Acetylene Arc.

Second-hand Prices.

In order that readers may be able to follow the general trend of the secondhand market, a summary, showing the lowest and highest prices asked by adver-tisers, appears in these columns every

Special Features. JUNIOR T.T. PROSPECTS. PRACTISING IN THE I.O.M. A RADIAL ON THE ROAD.

Amulree the Venue of Hill-climb.

The Glasgow club are holding a hillclimb on Amulree on the 26th.

Long Distance Records.

No fewer than thirty long distance records were taken during the month of May.

A Royal Motor Cyclist.

H.R.H. Prince Albert appears to be taking a keen interest in motor cycle matters, which perhaps is natural, since he is himself a motor cyclist. He is patron of the A.C.U. and a member of the A.A. and M.U.

Another Reunion.

Reunions of old comrades are the order of the day. Among others a dinner will be held in the autumn for ex-members of No. 2 Squadron R.A.F., the hon. sec. for which is Mr. John O. Comber, Ashenhurst, Guildford.

A Czechoslovakian Show.

The chief Automobile Club of Prague are organising a motor show, to take place July 17th to 25th. It will be the first exhibition to be held in this young Republic. The address of the secretary is the Czechoslovak Automobile Club, 1, Obenci Dum, Prague.

The Scottish Six Days.

It is rumoured that the route for the fourth and fifth days of the Scottish Six Days Trial, which is now only just over three weeks ahead, will have to be altered, owing to the difficulty of finding accommodation for the competitors at Grantown. It is probable that the alteration will not make any difference as regards observed hills. Campbell Mc-Gregor, the erstwhile secretary, is riding

a single geared clutch model Brough.

The most southerly point of the trial is reached on the sixth day, when Talla Hill, lying just off the main road between Edinburgh and Dumfries, is to be nego-Leaving the main road from tiated. Edinburgh the route branches to the left at Tweedsmuir, and thence leads over the heights via Talla to St. Mary's Loch. There are indications that a number of English motor cyclists propose visiting this hill to observe the performances of the competitors.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

REUNION OF EX-D.R.'S.

Sir,—I was pleased to read in *The Motor Cycle* that Capt. Schofield was endeavouring to arrange a reunion of ex-D.R.'s. Personally, I should very much like to meet some of my old pals. Many of them will recognise the old nickname of "Sampson." C. E. COX (late Sgt. D.R., R.E.).

PRICES IN EGYPT.

Sir,—I notice that a correspondent, writing from Buenos Aires, says that a Harley-Davidson costs just under £100. I was in Cairo recently, and inquired from a motor cycle firm how much the Harley-Davidsons were. They had about ten brand new 1920 models. Without looking in the least hit perturbed, the gentleman who answered my enquiry said 150 Egyptian pounds, that is, about 154 British pounds. I cannot imagine him selling many.

R. M. V. HOFFORD, 1st/17th Infantry, E.E.F.

PRICE OF PETROL TINS.

Sir,—To the buyers of petrol and benzole (beginners particularly) who are returning empty cans, I would say: Make sure of the price that has been paid for the can, or in the journey from shop to store the can is apt to drop a shilling in value.

I returned an empty two-gallon can, and asked for a full one. After taking the empty to his store, the shopman said: "The can you returned was a 3s. one; this is a 4s." Later I returned an empty, and was told it was a 2s.

Salisbury. RETLAW.

DRY BATTERIES.

Sir,—Referring to "Ixion's" remarks, regarding dry hatteries for lighting purposes on motor cycles and sidecars, it may interest him to know that I am obtaining very satisfactory results from such batteries. I consider that for side and rear lighting there is nothing to equal them for convenience.

The head light is the stumbling-block, as a fairly high current consumption is necessary to obtain a satisfactory light, and, of course, dry batteries do not give economical lighting at a high rate of discharge. To overcome this, to a certain extent, it is necessary to take advantage of the efficiency of the metal filament lamp, which is enhanced by over-running it to a certain extent. This, of course, is not recommended by the makers of the bulbs, as it undoubtedly shortens the life of the latter. It must be borne in mind, however, that the initial voltage of a dry battery is not maintained when passing a current to the lamp, but will fall to quite an appreciable extent during discharge. This fact makes it necessary carefully to select suitable bulbs, so that a satisfactory light is obtained, even when the P.D. of the battery has failen considerably. The user must be prepared to stand the extra cost of a bulb or so, in order to obtain the increased efficiency in lighting.

The sidecar and rear lamps are, of course, a simple proposition, and I am surprised that dry batteries are not more universally used, even though an acetylene head lamp is retained. I used such an outift in the last London-Exeter, and a complete dry battery set in the following Land's End Trial, without experiencing any lighting troubles whatever. The batteries for the side and rear lights were used in both events, and are still in use. They are quite small, the side lamp battery weighing about four pounds, and the rear lamp battery but a lew ounces, the latter being accommo-

dated in the carrier tool bag. I have obtained eighty hours light from each battery, tested under proper conditions for periods of two hours daily. The test being stopped when the light was considered to have depreciated about 50%. Even then, the illumination was quite good and would satisfy most people.

It is absolutely necessary to use good dry batteries, otherwise unsatisfactory results are almost certain to follow.

E. ATKINS.

THE LONDON-EDINBURGH.

Sir,-Four things connected with my experiences in the London-Edinburgh run remain in my memory. They are as follow:

(1.) The appalling state of the roads in Yorkshire, and, on the return journey, the dust and inconvenience caused by the heavy char-a-banc traffic here and in the Lake District.

(2.) The annoyance brought about by a section of trade riders, eight in number, who repeatedly stopped by the wayside and afterwards "hooted" their way past the other competitors, blinding them with dust, in order to regain their wonted positions according to numbers.

wonted positions according to numbers.

(3.) The fact that in a Northern town, on the return trip, I was charged 1s. 6d. for a 7½ in. bolt, 1½ in. long, which fell out again five miles further on, and was then found to be a very slack fit, indeed no fit at all. This was an old bolt taken off the bench; and—

(4.) That a village blacksmith, between Moffat and Lockerbie, made a new bolt of the right length that fitted to a nicety, and has not budged after 300 miles or more, and somewhat apologetically asked a shilling for his trouble.

These are more or less trivial incidents perhaps, to set against the great enjoyments of the trip, but they stand out nevertheless as reminders of the "contra" side of the great ride so far as they affected it.

PB 6.

Bedford.

Sir,—I believe that the entrance fee in the London-Edinhurgh run should be not less than £5, so that it will keep the number of entrants down, as if there are more than 400 competitors the run will be spoilt, and probably stopped. Another suggestion is that competitors should not be allowed to enter later than the beginning of the year. Spalding. ONE WHO DOES NOT LIKE A CRUSH.

THE REAR SPRINGING PROBLEM.

Sir,—Replying to "Progress's" letter in your issue dated April 29th (page 485), this is easily beaten in every respect, except that the same spring cannot carry 30 stone; that can only take, say, 12 stone. The extra weight is not 2 lb, and the extra cost is really quite trivial in production. Pleasing design and appearance; practically facsimile to any ordinary motor cycle. I have ridden such a motor cycle and sidecar over 5,000 miles.

Forest Gate, E.

MOTOR (YCLE T.T. & SUMMER NUMBER

NEXT WEEK'S ISSUE will be much enlarged and contain special articles and illustrations of worldwide interest. Order now to prevent disappointment. THURSDAY, JUNE 17th. 43d.

ROADSIDE COURTESY.

Sir,—Reading the article by "Chinook" on readside courtesy, a suggestion occurs to me that any motor cyclist who is hung up on the read and wishes assistance should simply the a handkerchief to the handle-bars. Then any passing motor cyclists would see the signal, and, Explose in the contraction of the contraction o give assistance.

Sir,-After a short spin of about seventy miles on Whit-Tuesday I felt much inclined to write you in almost identical strain as "Chinook." Like him, I passed many breakdowns,

stram as "Chinook." Lake him, I passed many breakdowns, but, unlike him, my four enquiries received what can only be described as disgusting responses.

I ride-a 1919 Triamph, which from experience does not belie its description of "trusty" (disclaimer), and I am therefore in the same position as "Chinook"—ready to give without much possibility of receipt. The sconer it becomes recognised that the obligation is to seek and not to proffer assistance, the better.

Blackwood.

TAXATION AND REGISTRATION.

Sir,-One wenders whether the Taxation Committee are aware of the methods employed in other countries.

Quite apart from the amount of the tax to be levied on various types of machines, the system employed in Switzerland strikes one as being so simple and effective that it could be employed with advantage to both the tax-payers

and tax-collectors in this country.

The system referred to is as follows:

On January 1st of each year every owner appears at the nearest "gendarmerie," and on payment of a lump sum (15 frs. in the case of a motor cycle) receives an official number plate, with the arms of the Canton and the number on it. The sum paid includes the tax for the current year, and registration fee for the same period. Until this plate has been fitted it is quite unsafe to use the machine, as a different series of numbers, or combination of letters and

unterent series of numbers, or combination of letters and numbers, is used each year, and the user of a last year's number plate is "spotted" by the first gendarme he meets. When a machine changes hands, the number plate is removed, and kept by the original owner (I have one I keep as a souvenir), and will be fitted by him to any machine he may buy during the year. Second-hand machines for sale in a garage are always numberless.

It is not an uncommon sight to see a vider with his number.

It is not an uncommon sight to see a rider with his number tied round his waist with a piece of string, and hanging at his back: he is probably to be envied, as it is likely that he owns more than one machine, since the authorities have sufficient intelligence to realise that it is almost impossible to ride more than one machine at the same time, and the one number suffices for any number of machines belonging to the same owner.

This system obviates the expense of the many men employed in this country to chase up offenders who have not paid their annual tax or who are using faked numbers, besides saying the motorist himself the inconveniences of our present

system.

As the whole question of motor taxation is being revised at the present time, would it not be possible to adopt some such arrangement to come into force next January? SO SIMPLE.

Sir,-Like the majority of motor cyclists, I am by no means satisfied with the Government's proposed form of taxation, although admitting that a heavier tax should be imposed on highpowered machines and cars, provided, of course, that the revenue so obtained is expended on the repair of reads.

Since the Government is averse to taxing motor spirit, it appears to me a compromise could be made whereby motor cycles and cars would pay on a h.p. weight basis. Thus, if a pay on a n.p.-weight basis. If ns, it a tax of 5s. per 100 c.c. and 5s. per cwt was placed on all motor vehicles a sliding scale would be in force, whereby a lightweight motor cycle would pay less than a medium weight, and so on.

I enclose a schedule showing how such a tax would work out. It should not be a very difficult task for the authorities to obtain the cubic capacity of engines and weights (unladen) of vehicles, while with a scheme such as this, if taxation should ever be reduced, a reduction under each of the headings would meet the case.

SCHEDULE SHOWING TAX LIBBLE TO BE PAID ON A BASIS TAX OF 5/7 PER 100 CC. AND 5/7 PER CWT.

	MOLOK	CY	CLES,					
Engine.	Weight, Cwts.		7axc 5/+ per 100 c.c.	tion. 5 /- per Cwt.	P	Tota Innual	re1	
150 C.C. 250 C.C. 350 C.C. 550 C.C. 550 C.C. 650 C.C. 650 C.C. 650 C.C. 750 C.C.	31		10 - 15 - 20 - 25 - 25 - 30 - 40 - 40 - 50 -	5		15 1 10 1 13 2 5 2 10 2 15 3 5 3 15	00000000000	
1100 c.c., with sidecar	41		551-	25/-		4 0	0	

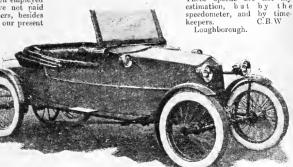

The above weights are only approximate. It will be seen that only in exceptional cases would the proposed annual tax of £4 for sidecar machines be reached. CHEQUERS. Welverhampten.

Sir,—Re H. C Wyley's letter in The Motor Cycle of May 13th. Evidently Mr. Wyley speaks only for his own circle, and can afford any sum for taxation. Here is my case. Nearly satty, pensioned on 25s. per week 1912. Bought Chater frame 1913, new engine 1914, and Clyno heavy sidecar for 25 1915. Put the lot together myself, and run half petrol and half paraffin. Cannot ride in cold weather owing to health. According to Mr. Wyley, I am to be denied any pleasure, as I cannot afford the railway fares now charged. I do all repairs myself, or I could not afford to keep the machine. to keep the machine. Essex.

SPEEDS.

Sir,-I have seen several letters in your columns of late about speed, and some of the writers seem to think that, it is quite impossible to attain speeds of 60 and 70 m.p.h. on the road. To think that is absolutely wrong. Anybody can the road. To think that is absolutely wrong. Any body can attain speeds on the road exceeding 75 and touching 80 m.p.h., provided he has the experience and the nerve, and also is in possession of a machine that will do the speed.

I, myself, have exceeded 70 m.p.h. on a 1919 7-9 Indian on several occasions, and once even with a friend on the carrier. I have also done speeds up to 68 m.p.h. on a 3½ h.p. Norton, 8 h.p. Zenith, and 7.9 h.p. Harley-Davidson. These speeds are not my

A light cycle car built by the Aero Motor Co., 21, Hope Crescent, Leith Wak, Edinburgh the second produced by this firm to special orders. CLUB NEWS.

Sheffield and Hallamshire M.C.C.

Owing to a bad thunderstorm, the competition fixed for the 29th ult. was postponed to a later date.

Leeds and Dist. M.C.C.

On the 13th inst, the club will hold a ladies' reliability trial, starting from the Roundhay Clock at 2.30 p.m.

Helensburgh M.C.C.

The results of the flexibility trial held on the 26th ult. were as follow: 1, A. M. Duncan (3³/₄ Scott); 2, J. McIntyr (4 Triumph); 3, W. Colvin (2³/₄ Diamond

Sutton M.C.C.

Starting from the Ridgway, the opening run on the 30th ult. took the form of a social picnic tour round the countryside. Lunch was taken at the top of Bury Hill, after which several members demonstrated the climbing abilities of their machines.

. Luton and South Beds A.C.

Despite a heavy thunderstorm, which raged during the early afternoon, the hillaged during the early alternoon, the fill-climb recently held at Kop Hill proved a big success, and some good performances were witnessed. The results were as follow: 350 c.c. class: L. Kell (24 New Hudson), 600 c.c. class: J. Hill (34 New Hudson). Rudge Multi). Unlimited solo: F. Child (23 Douglas). Unlimited sidecar: Capt. Cooke (5-6 James sc.) Light cars and cars: B. S. Marshall (8 Mathis).

Bristol M.C.C.

The following awards were made in the recent reliability trial to Land's End and recent reliability trial to Land's End and back: Gold medals: P. King Smith (Harley-Davidson sc.), F. Buchill (Donglas sc.), C. W. Rankin (Sunbeam sc.), W. W. Moore (A.B.C. sc.), A. W. Dyer (Donglas sc.), A. King Smith (Harley sc.), Eli Clarke, jun. (Donglas sc.), E. J. Clarke (Douglas sc.), S. Hodges (A.B.C.), and A. F. Smith (Norton sc.) Silver medal: D. G. Hepburn (Triumph

Bedford and District M.C. and L.C.C.

Members joining in the ladies' surprise day on the 20th inst. will meet in Elstow village, near Bedford, at 2 p.m. A secret sports programme has been arranged by the lady members, and an enjoyable afternoon's fun is anticipated.

Burton-on-Trent and District M.C.C.

In conjunction with the Loughborough M.C.C., a social run was made to Abbots Bromley and Lichfield. A stop was made at the "Goat's Head," Abbots Bromley, for tea, after which the results of the last trial were announced. First, N. A. Findlay (56 Rover sc.); second, A. Somerfield (4 Triumph sc.); third, F. Read (4 B.S.A. sc.).

Club Run.

Worcester and District M.C.C.

The results of the recent half-day trial Held by this club are as follow: 1, H. Moule (3½ Rudge); 2, C. H. Lewis (3½. Ariel); 3, J. A. Chadwick (2¾ Diamond).

Hastings, St. Leonards, Bexhill, and District M.C.C.

Some good performances were made on Winchelsea Hill on the occasion of the hill-climb recently held by this club-Eighteen competitors took part.

Neath and District M.C.

At a most successful dinner held recently, a collection was made in aid of St. Dunstan's Hospital, with particular reference to the D.R.'s blinded in the war, and a sum of £1 17s. 6d. was collected.

Marlow and District M.C.C.

Two classes, solo and sidecar, were run in the hill-climb held at Alms Hill, Henley, on the 31st ult. Both were won by J. P. Hodgson, riding a 3½ Hobday J.A.P.

Cork and District M.C.C.

The results of the Irish open trial, published last week, have now been con-firmed with one alteration. A Healy (4 Blackburne) has been awarded a silver medal in place of a bronze.

Sheffield and South Yorkshire M.C.C.

This recently formed club held its open ing run on the 30th ult. The event was a trial for the James cup. The winner proved to be R. Searle (4 Triumph), with P. Moon (3½ Rudge) second.

Helensburgh M.C.C.

Starting from Colquhoun Square at 3 p.m., the four hours reliability trial for the Prosser Cup, over a course of about eighty miles, will be held on the 19th inst. All classes of motor cycles, sidecars, and cycle cars up to 1,000 c.c. will be allowed to compete. Full particulars can be obtained from J. F. ticulars can be obtained from J. F. Fulton, trials sec., Findhorn, Helens-

THE ARBUTHNOT TROPHY TRIAL.

The Only Competition confined to Naval Officers. To be held in the Home Counties.

THE Arbuthnot Trophy trial is to be held on Wednesday and Thursday, July 7th and 8th, and as entries close on the 21st inst., those who intend to take part should write at once to the Auto-Cycle Union, 83, Pall Mall, London. S.W.1.

An announcement of the trial appears in Admiralty Orders, thus showing it has the official sanction of the powers that be. the official sanction of the powers that be.
Instituted in 1919, the event perpetuates the memory of the late Rear Admiral Sir R. K. Arbuthnot, Bt., and is open to any officer or midshipman in H.M. Navy, the Royal Naval Reserve, or the Royal Naval Volunteer Reserve on the active list on the date on which entries close. Entrants must compete on solo motor cycles, which may be of any type or power.

The trial will extend over two days, and the course will be between 103 and 150 miles each day. No adjustments, repairs, cleaning, or replenishments, in-cluding repairs to or changes of tyres, will be permitted. Oil, pefrol and water may be taken on board during the luncheon stop. A novelty has been introduced this year in the form of a non-stop speed trial at Brooklands at the end of the road test. This speed trial will be divided into standard classes, namely: 250 c.c., 350 c.c., 500 c.c., 750 c.c., and 1,000 c.c.

The Knock-out Principle.

Competitors making the fastest time in their class will again race, and the competitor who, in the opinion of the judges, makes the best performance in the speed trial will be adjudged the winner of the Trophy. If no competitor succeeds in completing the road part of the trial according to the regulations, the competitor who makes the fewest number of involuntary stops will hold the Trophy

for the ensuing year.

The present holder of the Arbuthnot Trophy is Lieutenant E. S. K. Evans Greaves, R.N. Unfortunately, Mr. Evans Greaves cannot compete this year, though he has sportingly decided to send a donation to the A.C.U. to help with the expenses of the trial.

For the 1920 event the following en-

tries have already been received: Sub-Lieutenant Thornton-Jones, R.N., 4 h.p. Donglas; Lieutenant G. P. Gleu Kidston, R.N., 3½ h.p. Sunbeam; Sub-Lieutenant C. Plumer, R.N., 6 h.p. Zenith.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," ao, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d, stamped addressed envelope for regly. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for case of reference. Letters containing legal questions should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Wind Waggons.

I read, with great interest, the recent article in The Motor Cycle on wind waggons. I have decided to build one, but, am at a loss for necessary data. Could you tell me the h.p. required per unit of weight, using a 4ft. 6in. diameter propeller? Also would the revs. be very excessive?—INTERESTED. There are so many factors involved in the question you raise that it is impossible for us to deal adequately with it, without having more particulars of the engine you propose using and also the type of propeller. Your best course would be to obtain from the engine makers a power curve and submit this to the propeller manufacturers. The latter would then be able to design a propeller to suit your purposes.

Balancing a Two-stroke.

I am a constant reader of The Motor Cycle, and shall be much obliged if you will tell me the correct way to balance a single-cylinder two-stroke. Should the balance weights of crauk exactly counterbalance weight of piston, connecting rad, gudgeon pin, etc., if the crank is put between lathe centres.—H.H.

The balance weights should equal half the weight of the reciprocating masses pus the weight of the big end and crank pin. The customary method is to take half the weight of the piston, gudgeon pin, and top half of the connecting rod and add this to the weight of the lower part of the connecting rod with big end and crank.

Misfiring.

I shall be glad if you can enlighten me as to the cause of my 2½ h.p. two-stroke periodically missing (about one in every eight or nine). The machine was running well up to a short time ago, but on starting up one morning, recently, I found the above trouble. I may say that I have tried different plugs, taken down carburetter, and fitted smaller and larger jets, examined magneto, and checked timing, but the missing still continues. The machine has only done about 200 miles since being decarbonised.—G.P.

As everything appears to be in order, it is very difficult to diagnose the trouble without an actual inspection of the machine. The following might be triedenew the sparking plug, clean the carbon brush and slip-ring of the mag-

neto, and make certain that the carburetter is not flooding. The last named trouble might be caused by the adjustment of the needle having altered, or it night be due to the float being cracked and weighted down by petrol which has entered.

Tuning for Speed. I wish to get the greatest

amount of speed possible out of my engine. Would you advise me to (1) drill the piston or have a lighter one fitted (2) or balance the flywheels? (3.) Will you give me the most efficient timing? What h.p. does my engine develop? it has a bore of 2½in. and stroke of 3½in., (5.) The magneto misses very badly at high speeds. Should I fit a low tension magneto, or what is the fault with the present one?—S.B.

(1.) You might try the effect of drilling the piston or fitting a lighter one of steel or aluminium. (2.) If any difference is made to the weight of the piston it will be necessary to rebalance the engine. (3.) The most efficient timing varies so nuch

and is dependent on so many differences of engine design that we cannot give you an exact timing without knowing the engine you are using. (4.) The dimensions of your engine are 76×85 mm. bore and stroke = 385 c.c. Such an engine would be rated at 3 h.p., and would probably give about 4½ b.h.p. at normal revolutions. (5.) Low-tension magnetos are not used nowadays; we cannot tell the cause of the trouble with your present magneto without having further details. The misfiring at high speeds may be due to a faulty sparking plug. Consult "Motor Cycles and How to Manage Them."

Gears for a Clutch Model.

We do not know of any two-speed gear which you could fit to your 7-9 h.p. clutch model Indian, without structural alterations to the frame.

A BUSY BROOKLANDS SIDESHOW.

Apart from the racing, quite an interesting hour could have been spent at the last motor cycle Brooklands meeting examining the many and various machines that were to be seen.

READERS' REPLIES.

Adjusting Scott Chains.

I see "W.E.N." asks about tightening the high gear chain on a Scott, when the low gear chain is still tight. I think my method will possibly be of assistance. My low gear chain is in two parts, one of which is the length of the high gear chain, and when the high gear chain gets stretched, I exchange it for the unstretched piece of low gear chain, when the high will be found to be tight and the low slack, and later on, when the high is again slack they are both slack enough to be taken up without affecting the alignment.—D. G. TAYLOR.

Benzole and the Scott.

"M.W.W." in your issue of May 13th complains of the effect of benzole on the rubber cylinder base rings of his Scott. There must be something wrong here. Since January last I have run my 1920 Scott exclusively on benzole. Its mileage to date is about 2,800. The machine has not yet been down, and there are no indications that such a course is necessary. No alterations of any kind (other than jet No alterations of any kind (other than jet adjustments) have been made to the makers' finished turnout. So far as I am concerned, I find the machine to be "everything, and more than the makers' claim."—A.A. 282343.

Slipping of Roc High Gear.

Re the trouble experienced by "H.S." with the high gear band slipping on his 1912 Roc gear. When this happens most riders suspect wear on the lining of the band. If adjusting the band so that a free engine is still obtainable will not cure the trouble, the cause is nearly always to be found in the wedge and push pins. I recently cured a most persistent and exasperating case of high gear slip in a Humber Roc gear by renewing these pins. There is now no trouble at all; the gear will hold an outfit on the stiffest hills without a suspicion of slip. Owners of Roc gears should look out for this wear, for if it becomes considerable the wedge pin will one day get right under the push rod and jam there, even when the pedal is released. If the low gear is then brought into operation both gears will be in use simultaneously, with disastrous consequences to the pinions. Any tendency of the wedge pin to go further into the axle than usual should be immediately investigated .- G.A.

British-made Magnetos.

The new British motor cycle records, recently set up for one to three hours by D. R. O'Donovan, and eight to twelve hours by F. A. McNab, were made with C.A.V. magnetos.

G.S.C. Autocyclette.

We understand that preparations are rapidly being completed for a limited production of the C.S.C. Autocyclette, which was described and illustrated in a recent issue of *The Motor Cycle*. An announcement regarding price and delivery will shortly be made.

Dukeries Motor Co.

A photograph was published in The Motor Cycle for May 20th of a 7-9 h.p. twin built by E. Chandler, of Mansfield. We understand that a very limited number will be built this year, but production on a large scale will not be undertaken at present. The engine is fitted into a special Campion frame.

Increases in Prices.

Abingdon Works, Ltd., Birmingham: Abingdon Works, Ltd., Birmingnam: Belt fastener now Is. 2d. plus postage.
Cedos increased to 70 guineas and 72 guineas for gentleman's and lady's machine respectively.
The price of G.N. cycle cars has been increased by 121.

increased by 12½ %

Wolf motor cycles are increased in price 5% as from June 1st.

Tiller Steering.

J. C. Coney, who competed in the London-Edinburgh on a 3½ h.p. Wilkin sc., rode the last 160 miles minus the left handle-bar. Notwithstanding, he checked in to time, and has been awarded a silver medal. Coney was a D.R. throughout the whole period of the war, and is now in charge of the motor cycle branch of Messrs. Best and Sons, Grimsby.

"Brooks Book of 1920."

An interesting little booklet bearing the above title has just come to hand. It is the thirty-fourth edition, and is nicely got up and well illustrated in colour. All got up and weil illustrated in colour. All types of Brooks saddles, toolbags, tube and belt cases, and other useful accessories are shown. A copy will be sent free on application to Messrs. J. B. Brooks, Criterion Works, Great Charles Street, Birmingham.

A.B.C. War Engines.

It has come to the notice of A.B.C. Motors (1920). Ltd., that in a number of cases their 250 c.c. and 500 c.c. engines, which were specially designed as power units for various Government purposes during the war, are now being used (second-hand) in built-up motor cycle frames and cycle car chassis. A.B.C. Motors, Ltd., ask us to state that it should be noted that no responsibility can be accepted for damage arising from the use of such engines.

A Rough Riders' Trial in France.

British Machines Win Most of the Prizes.

BRITISH machines were predominant in the recent trials in France by the Association des' Anciens Motocyclistes Militaires. The contest consisted of a reliability run over the Paris-Anxerre course, followed by a despatch riders' cross-country run. Out of thirty-nine starters, thirty-three survived these tests, and were thus eligible to compete in the "cold starting" and

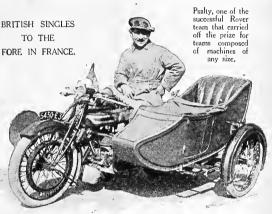

flexibility tests which took place on the

following day,
The A.B.C., Triumph, and Rover side car made the best all-round individual performances, while the Norton team won the President of the Republic prize for best team performance. A Blériot won the "starting" contest, taking only $4\frac{1}{5}$ s, with A.B.C. $4\frac{3}{5}$ s. The following table shows the best individual times:

Class,	Rider.	Starting in Secs.		Elexibility
350 c.c.	Delorme (Douglas)	- 91		30%
500 C.C.	Detruche (A.B.C.)	48		38
500 c.c.	Naas (A.B.C.)	42	٠.	401
750 c.c.	Davachelle (Triumph)	7		365
750 c.c.	Penney (Triumph)	123	٠.	311
500 C.C.	Slalty (Rover sc.)	51	٠.	4.5
750 C.C.	Delabre (Rover sc.)	6 !	٠,	42

Norton team: Barthelemy, Plateau, and Bastide.

TO COVER ALL RISKS.

Details of the Manner in which "The Motor Cycle" has provided a Comprehensive Scheme for Motor Cyclists.

In the early days of the motor cycle, difficulties were continually cropping I difficulties were continually cropping up in all directions. Not the least of these was the question of the motor cyclist's hability in the event of an accident involving damage to others, while the question of repairing damage to the machine itself was also an important one. Though the problem was great, if the use of a motor cycle was to become every man's pleasure, it had to be faced and solved. Most of the insurance companies were indifferent to the matter to the were indifferent to the matter to the extent that, under no circumstances; would they consider such risks; and some companies still maintain that position, their objection being due to the small amount of data upon which to base pre-

Although the first start off had of necessity to be a leap in the dark, the proprietors of *The Motor Cycle* were determined to make insurance readily obtainable at reasonable rates, and with obtainable at reasonable rates, and with that object The Motor Cycle Insurance Department was created. In its early beginnings it was the connecting link between its readers and reputable insurance offices willing to accept the risks. A later development, prompted very largely by a desire to obtain unlimited third party cover (which was not up to then

viewed with favour by some of the biggest companies), was that we were able to get a Lloyds Syndicate to issue a policy—the wording of which was suggested by ourselyes—granting what we considered was absolutely essential in cover at as low a rate as possible consistent with the undoubtedly serious risks. Not the least of the special advantages of this particular policy was that the whole administration was completely vested in our own Insurwas completely vested in our own insur-ance Department, so that any reader finding it necessary to make a claim was sure of impartial investigation. The Motor Cycle policy fully justified itself, but another development arose. The particular underwriters at Lloyds who had underwritten the risks advised us that after December 31st last year, they would cease underwriting any motor risks. It was clear that we could not stop the special protection hitherto accorded our readers, so consequently we were compelled either to secure other underwriters or form a company of our own, and carry

To Make Security Doubly Sure.

On reflection, there appeared to be no security against a recurrence of the same position if we adopted the former alternative, so, in order to make security

doubly secure, The Autocar Fire and Accident Insurance Co., Ltd., was formed. This company was created on the 31st December, 1919, with an authorised capital of £500,000 and a subscribed capital of £50,000, which, we think, will be readily agreed gives ample security to policy holders.

In addition to issuing The Motor Cycle special policy, the company also issues the special policy authorised by The Autocar, the new company having also absorbed The Autocar Insurance Department. The organisation is similar to that which existed in connection with the two Insurance Departments just mentioned, Insurance Departments just mentioned, and, in addition to having its head offices at 20, Tudor Street, London, E.C., branches have been opened in Glasgow, Newcastle, Leeds, Manchester, Birmingham, and Cardiff.

The necessity for insurance is well appreciated, and those desiring to cover risks by insurance with an office that is almost essentially a motorist's organisaamost essentially a motorist's organisa-tion (thereby ensuring that the motor cyclist's viewpoint has sympathetic con-sideration), will do well to apply to The Autocar Fire and Accident Insurance Co., Ltd., 20, Tudor Street, London, E.C.4, for the complete and comprehen sive particulars which will be forwarded.

A Review of the Practising. Weather Conditions not Ideal for High Speeds. Form Improving Day by Day. Excellent Organisation.

THE JUNIOR T.T. RACE IN A NUTSHELL.

DATE AND TIME OF START: 9.30 a.m., Tuesday, June 15th, 1920.

DISTANCE: Five circuits of 37 miles 6 furlongs each. Total distance, 188 miles 6 furlongs. FIRST PRIZE: The Junior T.T. Trophy, to be held for one year. £40 in cash and special gold medal.

SECOND PRIZE: £20 in cash.

THIRD PRIZE: £10 in cash.

"THE MOTOR CYCLE" TROPHY for the fastest 250 c.c. machine.

TEAM PRIZE: To be won by a nominated team, who must all finish the course within thirty minutes of the winner.

PRELIMINARY EXAMINATION: Monday, June 14th, at 10 a.m.

PREVIOUS WINNERS.

Eric Williams, single-cylinder A.J.S. (74 × 81 mm. = 318 c.c.)

1913 H. Mason, V twin N.U.T. (60 \times 61 mm. = 344 c.c.) . .

W. H. Bashall, flat twin Douglas (60.7 × 60 mm. = 350 c.c.) . . 39-6

1911 .. P. J. Evans, V twin Humber (60 × 60 mm. = 340 c.c.) 41.5

Douglas, I.O.M.

GOOD deal of work has been accomplished by the competitors over the Isle of Man course, and most, if not all of them, have now completed the minimum number of circuits to qualify for

the races. The arrangements, organised by the Auto Cycle Union for the regulation and control of the daily practising, are excellent, with corresponding benefit to the competitors. The daily programme, from 4.30 a.m. to 6.30 a.m., has been carried

ont successfully. In addition to the arrangements made for telephonic communication between the various post offices on the course, and the start at Douglas, special telephones have been installed at the Ballacraine and Creg-na-Baa Hotels, so that with the help of marshals, and a system of signalling, almost any part of the course can be in close touch with the officials and timekeepers at Douglas.

Warning banners are erected at a dis-tance of 300 yards on the following corners : Quarter Bridge, Braddon Bridge, corners: Quarter Bridge, Braddon Bridge, Ballacraine, Glen Helen, Kirk Michael, Sulby Bridge, Hairpin Corner, Windy Corner, Keppel Gate, Creg-na-Baa Sign-post Corner, and Governor's Bridge, and extra warning signs have been displayed at Sulhy Bridge and Governor's Bridge, both of which spots on the course require

more than ordinary care.

The Manx M.C.C. are giving a good deal of help to the A.C.U., a dozen members acting as marshals on the course each morning. The worst corners are each morning. The worst corners are also patrolled by the police, and it may be mentioned incidentally that all the marshals conducting the practising have been sworn in as special constables, and wear the official sleeve band as such when

on duty from 4.30 a.m. to 6.30 a.m. on practice days.

The Most Dangerous Spot.

It is probable that most of the competitors will consider Keppel Gate to be the most dangerous spot on the course, although unusual weather conditions may make other parts on the circuit as bad, if not worse, to negotiate in the actual races next week.

The trouble with Kennel Cate is that.

The trouble with Keppel Gate is that a competitor, travelling at great speed down the mountain road to Hillberry, may misjudge his speed for the conditions and bend of the course at this spot, and easily bend of the course at this spot, and easily come off, while at other places a rider knows that he has to slow down, and, therefore, takes the necessary precautions. On one or two mornings the mist on the mountain road has given trouble to the mountain road has given trouble to the men, and in the earlier part of the

If the facilities for embarking and disembarking of motor cycles were as good at Douglas as they are at Liverpool, more motor cyclists would take their machines to the Isle of Man. Major Dixon-Spain, O.B.E., M.C., assistant secretary of the A.C.U., is seen in the Brough sidecar of S. W. Phillipott, A.C.U. Consul for Liverpool. We are indebted to Messrs. J. Blake and Co., Liverpool, for the photograph.

and of the ruts and bumps at various stretches.

Notes on the Practising.

As recorded in last week's issue, official practising commenced on Monday, the 31st ult., when the weather was had over the Snaefell stretch, but good times were made by D. M. Brown (Norton), G. Dance (Sunbeam), and others. The A.C.U. announces that no official times of the practising will be published, but speeds are taken each morning by The Motor Cycle. and may be taken as accurate for all intents and jurposes. The second day's practice was, to some

extent, marred by the accident which be-

fell T. H. Haddock, riding an overhead valve A.J.S. In passing Keppel Gate at speed, he ran into a gulley at the side of the road, and was thrown from his machine a distance of sixteen yards, according to the local report, and landed on his head. The marshal near the scene of the accident communicated with the starting point, and the official doctor and local ambulance reached Haddock in good time, after which he was taken to hospital. The rider suffered rather bad injuries to the head, but a good recovery is expected.

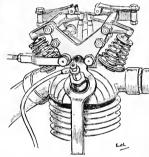

Two other mishaps occurred during the practice riding, Graham Walker (Norton)

hitting a stray sheep on the Snaefell Road, and sustaining face bruises and scrapes, but continuing on to the finish in spite of his injuries; and G. Cowley, senr. (23 A.J.S.), who is fifty-four years of age, skidded at Governor's Bridge, but was able to resume practising after a day's rest.

Value of the T.T. Helmet.

The strict enforcement of the A.C.U.'s regulations in regard to helmets is to be recommended, and T. H. Haddock's life was undoubtedly saved by the helmet he was wearing at the time.

Weather conditions, especially in the high parts of the course, were bad, the mist on the mountains making practising difficult. The fastest time was accomplished by H. R. Davies (2³/₄ A.J.S.), his

The A.J.S. overhead valve arrangement

circuit being made in 47 mins. 40 secs., his speed being 47.4 m.p.h. This is an exceptionally good performance and augurs well for the A.J.S. chances. The Sunbeam, Norton, A.J.S., and Indian teams completed a number of laps, and the A.B.C. and Ivy machines put in some work also.

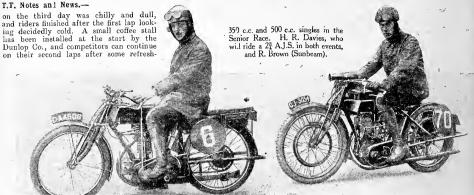

In view of Summer Time being in force, practising occurs one hour earlier than in the last T.T., hence the morning mists are often more prevalent in the mountains during practising. The weather

THE STARTING POINT OF THE T.T. RACES.

At this spot next week expectation will reach fever heat. Even during the early morning practising there are speculation and discussion among the interested onlookers who study the "form" of the riders.

T.T. Notes and News .-

Another accident occurred just before the commencement of practice, in before the commencement of practice, in which two men were injured. In proceeding to the start, N. C. Heath (A.J.S.) collided with one of the marshals, riding a private machine, both men having to go to hospital. Their injuries, although aggravating, are not likely to be serious.

The Sunbeam, Indian, Norton, and A.I.S. they wave injury to a property of the sunbeam.

A.J.S. teams were again out, and a number of laps were completed by them, as well as the A.B.C. and Levis machines. Twenty-three competitors completed the

course, eight of which accomplished two laps during the morning. Of the fast circuits made, D. Brown (Norton) made fastest time in 45 mins. 52 secs.; G. Dance (Sunbeam), 46 mins.; T. C. de la Hay (Sunbeam), 49 mins. 1 sec.; and R. Brown (Sunbeam), 50 mins. 30 secs.

One of the features of this morning's practice was the excellent performance of the Levis, ridden by Gus Kuhn, who made the circuit in 55 mins. 50 secs. This made the circuit in 56 mins, 50 secs. baby machine exhibited a wonderful amount of speed and vigour.

Several complaints were made by Sunbeam and other riders in regard to sheep on the mountain road, and the A.C.U. set to work to eliminate the evil.

THE MOTOR CYCLE LIGHTWEIGHT T.T. TROPHY.

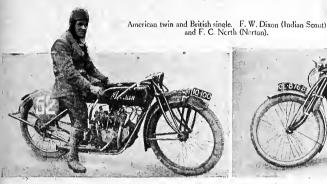

To encourage the development of light-weight motor cycles, The Motor Cycle has presented the above cup for machines of 250 c.c. in the Junior T.T. Race on Tuesday, the 15th inst. The trophy, which is to be won outright, weighs 75 ozs., and is 13in. in height.

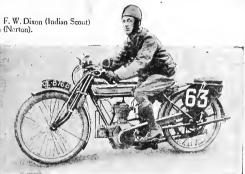

The Diamond, Blackburne, New Comet Duzmo, Dot-Jap, and the Senior T.T. Douglas machines had not made their appearance by the end of last week, and, taking into account the possibility of bad luck while practising, none too much time was left to make sure of the minimum number of official laps being made before the end of practising.

It took some time for the competitors to get accustomed to Governor's Bridgeseveral of them over-ran this corner on the earlier days of the practising. On the other hand, some good cornering was done by others.

The early morning practising attracts spectators at many points where the "cornering" skill of the T.T. entrants is demonstrated. One favourite point of vantage is the spot depicted, showing one of the hairpin bends on the steep down grade leading from the Snaefell road into Glencrutchery road.

Despite his fall on the Tuesday, Walker (Norton) was out again on Wednesday, on which day Kuhn (Levis) took a toss at the Bungalow, without, however, injury to himself or his machine.

Thursday morning's practice was aided considerably by fine weather, with sunshine and practically no mist, which enabled the competitors to get away quickly and make brisk riding. The on-lookers at this early time were more numerous than on previous mornings, and the crowd increases daily.

With the exception of one rider, the Sunbeam team completed the six circuits required by the A.C.U. regulations by the fourth day of practice, which is testi-

FLYING KILOMETRE RACES AT DOUGLAS.

The Motor Cycle rose bowl offered by the proprietors of this journal for the fastest time made in the Flying Kilometre Race on Douglas Promenade on Friday, the 18th inst.

mony to the enthusiasm of the Sunbeam men and the efficiency of the practising arrangements under Mr. Greenwood, the Sunbeams are very smart on the course. The A.J.S. team did not turn out on the fourth day, their record to that date being good and permitting a day's rest. J. W. Shaw (Norton), the Belfast rider,

made fastest time in the Thursday morning's practice, his average speed being 48.5 m.p.h., while Clark (Levis) made an excellent lap at 41 m.p.h., a creditable performance, since it was only his third attempt.

In the first four days' practising the A.J.S., Sunbeam, and Norton machines have been the most conspicuous in regard to speed, but there were still other machines that had not appeared on the course. The whole of the Nortons had not then commenced practising.

On Friday last at an average speed of 51 m.p.h. Rice (Sunbeam) made a record practice lap of the course in 44m. 28s., thus heating D. Brown's (Norton) record on the previous Tuesday by approximately a minute. The fastest lap in the last Senior T.T. was 42m. 16s. The Norton ridden by J. W. Shaw also averaged 50.5 m.p.h., his time being 45m. 3s., while G. Dance (Sunbeam) rode a circuit in a little over 46m.

The strong wind on this morning made the riding slow on the far side of the Island, although a correspondingly faster pace was made on the mountain climb from Ramsey. The weather being fine, however, a number of men took the opportunity of making double laps for qualifying.

The New Section.

O. Wade (A.J.S.) skidded at Governor's Bridge and suffered a cut face, and several men had tyre trouble on this day.

Governor's Bridge is proving to be the most difficult part of the course for a number of competitors to negotiate. The Sunbeams are, however, cornering well at this point.

Saturday morning was perfect for practising, with no wind, and a con-

siderable number of competitors and reserve riders started at 4.50 a.m., led away, as usual, by the veteran F. W. Applebee on his Levis. Three Diamonds appeared for practice work, one of which has a very neat overhead valve twin J.A.P. engine with ball bearing rockers.

W. Applebee, it is noted, uses upturned handle-bars on the Levis, but put up excellent performances.

A STUDY IN CORNERING. A scene taken soon after dawn. The light during the early practising is not all that the photographer can desire.

T.T. Notes and News .-

A third A.B.C. machine now made its

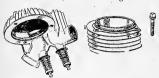

appearance in practice.

The majority of men who had practised The majority of men who had practised during the week were by this time thoroughly used to the course. The practice on the morning went through without any accident to riders, although a non-competitor with the Indian colony here injured his face in a fall on

the Scby-Ramsey stretch.

The Clincher Co. are supplying Oxo to riders at the start and finish.

A number of competitors, having qualified for the race, were able to go around

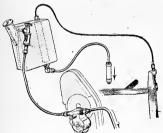

T.T. Sunbeams have detachable cylinder heads held down by three bolts; the joint is made by a copper asbestos washer,

the course at a more leisurely pace in order to make a survey of the more troublesome stretches.

Forty-seven machines were out again on Monday morning, including a number of newcomers to the Island, which were of newcomers to the Island, which were sturting their practising a week behind the majority. These latter included the Blackburnes, 3½ h.p. Douglas, Woolers, Dot-Jap, New Comet, Aurora, and Duzmo, and so completed the lists of those entered in both events.

The roads were extremely dusty, but fortunately the weather was fine with no wind. Rice (Sunbeam) made fastest time

The Sunbeam lubrication system. A footoperated oil pump gives a direct charge to the engine when required, while a mechanical pump on the magneto chain case maintains a constant supply of oil in the crank case.

in approximately 44½m. on his second lap. This rider collided with a telegraph pole about a mile from Ramsey Gooseneck on the mountain climb, and was thrown some distance on to grass at the side of the road. He was picked up dazed by another Sunbeam competitor, but was not

another Sunbeam compensor, our was assertiously injured.

Eric Williams on his Sunbeam made two laps at 45m. and 45m. respectively, and Townshend and De la Hay, also on Sunbeams, lapped in 47m. and 46m. respectively. Norman Black on a belting of the specific of the spec driven Norton with Philipson pulley made the trip in 48m., while D. Brown and

T.T. and Summer Number

THURSDAY, JUNE 17th.

From cover to cover the contents will be of more than ordinary interest to every motor cyclist, whether soloist, sidecarist, tourist, competition rider, or racer.

TOURIST TROPHY MATTERS will form a special feature.

Walker, also on Nortons, finished in 47½m. each. Misfortune overtook Dallison (Ivy), whose machine caught fire between Sulby and Ramsey. He was reported to be uninjured, but his machine is badly damaged. Most of the new machines commencing practice on Monday morning were slow; this was natural, as it was the riders' first time round, but Holroyd (Blackburne) lapped in 57m.

A Week's Practising. Some of the Lap Times.

Lap Times.

MONDAY.—C. Dance (Sunbam), 49m.; R. Brown (Norton), 54m.; E. S. Abnam (A.B.C.), Norton), 54m.; E. S. Abnam (A.B.C.), Norton), 47m.; V. E. Horsman (Norton), 47m.; V. E. Horsman (Norton), 47m.; C. Horsman (Norton), 47m.; C. W. Walker (Norton), 58m.; D. S. Alexander (Indian Scott), 55m.

The Coventry Club—the present holders of the Cup—have entered the same riders who were successful last year.

Entries close to-day.

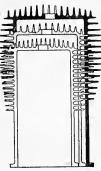

The T.T. course—37 miles 6 furlongs. Junior: Five circuits. Senior: Six circuits.

The Manville Trophy Trial.

THIRTY-SEVEN riders competed for the Manville Trophy in a trial from Coventry to Bath and back last Saturday. It was a stiff trial, in every way worthy of the valuable trophy, and included Birdlip (climbed twice), Portway, Rising Sun, Sudeley, and the rough colonial section from the top of the last wationed hill to Stewowthen Wold

mentioned hill to Stow-on-the-Wold. Some of the single-cylinder sidecars had great difficulty in maintaining schedule speed over-this section where, in places, sidecar chassis scraped the ground.

sidecar chassis scraped the ground. Rising Sun proved to be the pièce de résistance. The majority climbed the hill without undue effort, others just managed it, while the folloving failed: J. M. Philpot [23] Wilkin], G. F. Evans (23] Douglas), E. Swindlehurst (3½ Lea-Francis), A. L. Auerhaan (4 Triumph), E. A. Barnett (3½ Invicta), H. F. Harrison (4 Triumph sc.), and S. Wright (4½ Humber sc.)

THE THREE SIZES OF T.T. ENGINES.

The cylinders of 250 c.c., 350 c.c., and 500 c.c. compared, which illustrates that capacity increases in greater proportion than do the external dimensions

The 1914 Junior T.T.

Winner.—Eric Williams riding a single-cylinder four-stroke A.J.S., 74 mm. bore, 81 mm. stroke. 548 c.c. capacity. Side-by-side valves. Four speeds. Gear ratios $4\frac{3}{4}$, $5\frac{4}{4}$, $6\frac{3}{4}$, and $7\frac{1}{2}$ to 1. Time 4h, 6m. 50s.

Average Speed of First Three Finishers.—
(1.) Eric Williams (A.J.S.), 45.6 m.p.h.
(2.) C. Williams (A.J.S.), 44.7 m.p.h.
(3.) F. J. Walker (Enfield), 43.3 m.p.h.

Lap Times.

Fastest Lap of the Race.—Eric Williams, second lap. Time 47m. 18s. Average speed, 47.57 m.p.h.

Fastest V Twin.—F. J. Walker (Enfield), 47m. 35s. Average speed, 47.36 m.p.h. Fastest Flat Twin.—G. E. Elwell (23 Douglas), 50m. 13s. Average speed, 44.78 m.p.h.

Fastest Two-stroke.—N. O. Soresby (234 Peco), 58m. 55s. Average speed, 38.4 m.p.h.

Birdlip also proved troublesome to a few, while H. F. Harrison (4 Triumph sc.) took the top bend so fast that he struck the wall with damage to his sidecar body.

Bad luck pursued Swindlehurst, who broke a chain five miles from the finish.

Eficit (5-6 Rover).

CLASS II. (SIDECAR COMBINATIONS).—F. L. Allen (5-6 Rover sc.), H. A. Smith (4 Triumph sc.), T. R. (Sihhons (8 Acme sc.), H. Finch (4 Triumph sc.), D. A. Atkin (8 Acme sc.), J. W. Ravenhall (5-6 Rover sc.), C. R. Little (4 Triumph sc.), H. F. Harrison (4 Triumph sc.), W. J. Montgomery (5-6 Rover sc.), F. Arbuckle (4½, Bundber sc.), D. S. Heatter (4½, B.S.A.Sc.), A. T. S. Harley, D. S. Heatter (4½, B.S.A.Sc.), F. H. Brown (8 Rex sc.), and S. Wright (4½, Humber sc.),

CLASS III. (CARS).-W. Montgomery (25 Crossley), J. W. F. Crouch (8 Crouch), and Miss V. Hathaway (11.9 Hillman).

Mountaineering in Yorkshire.

The Ilkley L.C. and M.C.C. Open Trial. Of 117 Starters, Twenty-six Fail to Complete the Course.

NORTH country motor cyclists are mostly sporting riders by nature and environment. They are forced by circumstances to take the rough with the smooth, but in the route laid out by the Ilkley club there was enough of the "rough" to satisfy the most ardent spirits.

Six observed hills and as many more nearly as severe, mile after mile of moor roads amidst beautiful scenery, and withal excellent organisation, were the outstanding features of the most sporting trial we have yet witnessed. Had last Saturday been wet—but it was not, so why solilouise?

The Course.

On leaving the Crescent Hotel at Ilkley, competitors were led to a weighbridge in the town. Immediately afterwards began a long twisty climb, unobserved, but quite as severe as most observed hills in Midland and Southern trials. This was followed by a section of road so rough as to inspire some dread as to the future.

road so rough as to inspire some access as to the future.

A steep drop into Stockbridge, with a fearsome hairpin, led to the valley again, and there followed the first observed hill. Thwaites Brow, a cobbled ascent of single-figure gradient, including five hairpins. Three and a half miles further on came Harden Bank, a short, steep hill with a nasty turn at the bottom and an appalling surface of rocky outcorp. Then followed an up and down section, having a few steep hills and one short but hair-raising descent, and then from Sutton a fine main road to Skipton.

After this town the road led over Eastby Brow, with its two corners but good surface, then down Barden Scale, where the first beautiful view of Wharfedale is obtained. The road to Kettlevell was comparatively simple, but a check was located in this section at Threshfield.

A sharp climb with the inevitable hairpin leads out of Kettlewell, and after a short grassy road the dreaded Park Rash looms suddenly on the right. As usual the climb was very loose and stony, and this, combined with the I in 4 gradient, caused many failures. After the observed climb, grassy roads continue up hill, and culminate in a rough bit of I in 4½. Thereafter a winding route led finally to Kidstones Pass, which, although observed in the 1913 Six Days Trials, was not considered worthy of the honour by the Ilkley club. Instead, a sharp right tun led up "The Stake," a fearsome hill consisting of grass and loose rocks, and having one or two soft patches to entrap the rear wheels of sidecar outfits. A long and tricky descent to Semmer Water was followed by an equally long and very steep climb up the other side of the valley, the top hairpin being particularly steep, thence to Hawes and a welcome lunch stop.

White Shaw Moss Again.

After lunch came a trip through some wild and beautiful scenery, including, of course, fearful ascents and descents, to Dent; thence, up the long severe White Shaw Moss, a hill which caused a strike in the 1913 Six Days Trial, but was responsible for comparatively little trouble in spite of identical conditions on Saturday last.

The corresponding descent included a sudden S bend on a grass road with nothing on one side to save a sheer drop, but all went well till after Clapham, where a sharp left turn led through two short but greasy tunnels. Then came a long stretch over Swarth Moor, through Langcliffe, and over Malham Moor, the surface gradually deteriorating till it proved more trying to man than machine. Then once more on to good roads to the heautiful village of Burnsall for tea.

Immediately after leaving the tea stop, an acceleration test was taken on Burnsall Fell, a fair gradient of excellent surface. Despite the gruelling of the day, most of the machines showed up well

Sidecars had the greatest difficulty on the loose surface of Park Rash. The picture shows enthusiastic spectators rushing to prevent C. W. Hartwell's 4 h.p. Norton outfit running backwards.

W. H. Hadfield (4 Triumph) climbing Kidstones Pass, which immediately preceded The Stake.

here, especially as they were confined to one gear for the fast and slow sections. The main road was followed down Wharfedale, Barden Tower and Bolton Abbey being passed, and a detour made over the moors to Beacon Hill at Beams-lev. This section was not difficult, although it involved steep gradients and a long descent, at the foot of which was Ilkley, the finish, and sighs of relief!

Observations on the Hills.

Thwaites Brow.—This hill was the easiest of the observed climbs and caused little trouble, despite its five hairpins and surface of smooth paré.

HARDEN BANK.—Troubles on this hill were entirely due to riders' inability to

steer on the rocky surface.

PARK RASH.—Rough surface, lose stones, and gradient caused falls and failures. The star solo climb was made by Capt. C. P. Wood (53 Scott), who shot up at speed, while the best sidecar was H. Pattinson's 8 New Imperial sc. R. Stacey (7-9 Harley sc.) made a splendid ascent, and F. D. Roper (7-9 Indian sc.) did well by jockeying. Excellent slow and steady climbs were made by W. L. Guy (33 Scott), P. Walker (4 Verus), A. Wood (52 B.S.A.), R. E. Darnton (7-9 Indian), and G. A. Reed (53 Scott).

The Stake.—This short single figure gradient, with great boulders over the road caused some trouble. H. M. Barton

THE STAKE.—This short single figure gradient, with great boulders over the road, caused some trouble; H. M. Barton (3½ N.U.T.) made a splendid climb, but H. Reynolds (4 Norton sc.), who had plenty of power, failed from wheel spin; H. Gluy (2¾ Coulson-B.) did well, and Cawthorn (2¾ Autoglider) was going strong and seemed adept at jumping off and "galloping" (no other word), when his little vehicle bounced him off on the rough surface.

rough surface.

SEMMER WATER.—A steep hill with a 1 in 5 hairpin. Only one or two failures were noticed, these being C. Marshall (24 Enfield), who obviously was underpowered, and F. Trueman (4 Campion), who missed his resu

who missed his gear.
White Shaw Moss.—Most solo men
got up by dint of footing to correct skids
on the stones. Despite the three miles'

ascent, with sections of 1 in 5½ and 1 in 5, little overheating was noticed. The sidecars suffered from wheel slip, but H. Reed (8 Dot sc.) made a splendid climb with his passenger on the carrier. H. Gibson (2½ Clyno), who had been doing wonders, got up with much foot assistance; the Scotts for the most part were sure, and the Triumphs did wonderfully well. The A.B.C. machines were troubled with wheel slip, but Applebee was very good. W. F. Waddington on an old hub-geared o.h.v. 5½ h.p. Precision made a good climb on his second attempt. A. B. Chapman (5 Brough) made a very slow climb, and just got up. Acceleration Testr.—The best speeds

ACCELERATION TEST.—The best speeds over the fast stretch were made by J. C. Standford (6 Rover), W. Atkinson (4½ Bat), F. C. Waites (4 Triumph), E. Porter (3 A.B.C.), G. W. Shepherd (31 Norton), J. Baker (32 Scott), and R. T. Cawthorn (Autoglider).

R. F. Craven (3½ Sunbeam) passing A. B. Green (3 A.B.C.) on White Shaw Moss.

As usual *The Motor Cycle* observed every section of the trial. One representative covered the whole course, riding with the competitors, while another made observations of most of the performances on four of the six observed hills.

R. T. Cawthorn (23 Autoglider), who finished the course to time despite tyre trouble. The execrable surfaces bounced him off his machine repeatedly, but he persevered to the end.

Amateur Motor Cyclists in Competition.

Surbiton M.C.C. Team Trial in Surrey. Fourteen Clubs Compete,

THERE were eighty-four entries for the challenge shield presented to the Surbiton and District M.C.C. by Mr. Geo. Pettyt, of Mandes' Motor Mart. Fourteen clubs sent six representatives each, three riding solo and three sidecar outfits. All the clubs turned up complete except the Public Schools M.C.C., which arrived with two members short.

The start was made in fine but cold weather from the Talbot Hotel, Ripley, and an excellent and sporting course was and an exceeded and sporting course were followed. This consisted, to a large extent, of that employed in the 1913 A.C.U. One Day Trial The competitors went direct to Guildford, where they doubled back on their tracks, made a short détour, and ascended Bright Street in the town, which, taking many by surprise, caused several failures on the first round. H. E. Symons (5-6 Zenith) failed through belt slip, A. S. Brereton (7-9 Harley-Davidson) owing to a stuck up inlet valve, and W. Lewis (4 F.N.) and Wright on the Henderson sc. among others. The Clandon Road was followed to the turn-

Claidon Road, was followed ing to Newland's Corner, We saw practically all the starters ascend this famous, though comparatively easy, hill without a falter. Descending from Newland's Corner, Surrey's own particular heauty spot, the run was easy as far as the entrance to Shere, where the route bent back so as to include the ascent of Coombe Bottom-another old favourite. Its only difficulty is the corner at the top, the surface of which is now very rough. Here, J. H. Jeffree (5 Zenith) took the corner too fast and fell off. H. Lane (24 Levis) did likewise and ran up the bank, but cleverly recovered himself and did not tumble.

Parts of the descent were very rough, and at the bottom a sharp turn to the right was taken up a steepish hill, known as Crocknorth, on which the surface was The surface then became very bad. better and an easy run then ensued over

Surbiton and District M.C.C. Inter-club Team Trial. A. S. Brereton (Harley-Davidson) making light of Coombe Bottom.

Ranworth Common on to the Burford Bridge road. After this came the ascent of Blagdon Hill. Here, Brereton met three steam lorries he was unable to pass and ran back on to the bank. Other competitors were also impeded by this unpleasant traffic stop. The rest of the course back to Ripley was easy.

Each lap, which measured about thirtythree miles, had to be covered three times non-stop.

The winners were the organisers, the Surbiton M.C.C., who beat the Woolwich Club by a small margin.

THIS REMARKABLE MAN

Mr. O'Donovan

On Saturday May 29, at Brooklands, BROKE NO LESS THAN

14 RECORDS!!!

using an ordinary touring

3 JET BINKS CARBURETTOR

HERE THEY ARE:

50 MILES, 100 MILES, 150 MILES, 1 HOUR, 2 HOURS, 3 HOURS,

In the 500 c.c. Class-Sidecar.

On the same machine, viz., a 500 c.c. Norton, he also breaks the

750 c.c. Sidecar Records viz.:

100 MILES, 150 MILES, 2 HOURS, 3 HOURS,

And wondrous to relate, still on the same small engine, he breaks the

1,000 c.c. Class Records-Sidecar.

100 MILES, 150 MILES, 2 HOURS, 3 HOURS,

An astounding performance.

HOW DOES THIS AFFECT YOU? It proves that in addition to the Binks Carburettor being the only Carburettor that does give real flexibility and delicious riding and saves you 5/- out of each pound you would otherwise waste in petrol, it is a real super-carburettor for speed and power, and the carburettor to use whatever a motor cycle can be used for. It is a rank extravagance not to use a Binks Carburettor

Write for approval terms to-day.

C. BINKS Ltd., ECCLES.

T.T. Races—Isle of Man

Special Arrangements with the Auto-Cycle Union for the convenience of A.C.U.

Members.

1.-For those taking their Machines to the Island:

Petrol collection to avoid wastage and risk of Fire. On the Landing Stage opposite the Isle of Man Steamers, and an hour-and-a-half before each day boat is due to sail, J. Blake & Co. will have a staff and collection van in attendance. Petrol will be drawn off from the machines, measured and stored, and a voucher ticket for the quantity given in receipt. On returning from the Island it will be necessary simply to send a postcard to J. Blake & Co., rio. Bold Street, Liverpool, giving them particulars of date and time of return, name of boat, and quantity of Petrolue—it will be on the Landing Stage ready.

2.—For those coming to Liverpool by road and desirous of avoiding the trouble and risk of damage incurred by taking their Machines on the Boat to the Island:

A Garage within easy reach of the Landing Stage, spacious and stone-floored, capable of storing 500 machines, will be available at a nominal charge. This is situate on the corner of Laurence Road and Wellington Road, facing Gainsborough Road, immediately between Smithdown Road and Wavertree Road, and the attendants at the garage will advise the quickest route to the Landing Stage by 'tram or 'bus close at hand. This garage which is being managed for the Auto Cycle Union by J. Blake & Co.—will be opened from Saturday 12th to Monday 21st June, inclusive.

3.—For those who are prevented from attending the Races:

By courtesy of "The Motor Cycle" telegrams will be displayed in the window of our Bold Street, Liverpool, Showrooms showing the progress of the Races at every Stage.

A.C.U. Members everywhere are invited to fully avail themselves of these facilities.

Why a T.T.?

THERE are still doubters who fail to see the value of the Tourist Trophy Races. These people point out that they require a touring mount rather than a racing freak, but they appear to have little realisation of the fact that road racing provides the finest possible test work for future touring machines. There is probably not one maker who has performed well in past T.T. Races whose standard touring design has not been influenced by the valuable lessons learned in connection with the Isle of Man event.

Even at this early stage, the experimental work carried out for the race has led to a definite improvement, which has already been incorporated in all models of a very well-known machine. Many manufacturers have no actual experimental shops, and the experience gained in the construction and testing of their racing machines provides them with the most valuable data for future reference, and almost invariably well repays the outlay and disorganisation caused by the construction of a few special machines.

Police Activity.

LTHOUGH the necessity for an examination of licences is recognised by the majority of motor cyclists, there is a deal of evidence to show that the methods employed by the authorities are not above We could write at length on means to obtain the same results without causing such serious inconvenience, but our object at the moment is merely to point out to the authorities that, while motorists are being stopped and delayed every few miles, the balance of the police force could be better employed than in searching for minor contraventions of the Motor Car Act. For example, it will not be out of place to refer to the fact that, of the many cars and motor cycles stolen recently, no fewer than 400 of them have not been traced by the police. One can couple this latter fact with the "hold

ups" mentioned, but for police to be trapping on roads where there are small chances of danger to the public at a time when crime is rampant throughout the country is a matter which the Home Office and Ministry of Transport authorities would do well to consider.

This interference on the part of the police is likely to damage an industry which, at the present time, is working under difficulties, and, besides employing many thousands of men, contributes in no small way to an improvement in the country's financés by exporting to foreign countries.

The Popularity of the Sidecar.

OTOR cyclists have resolved themselves into two main groups: the younger generation, who ride solo lightweights, and the more mature riders, who fill the roads at week-ends with the ubiquitous sidecar. True, there are a few survivals who, perhaps, soured in all other directions, still retain a love for the high-powered solo mount; while

there is also a minority of young enthusiasts who

spell speed with a capital S, and favour machines capable of yielding that quality.

The great majority of machines seen at any popular motor cyclists' rendezvous, or on any main road, are of the family 'bus order, and it is not to be wondered at. With the help of an auxiliary seat almost any modern towing sidecar will comfortably carry a child in addition to the usual passenger, while one of the special pillion seats will take an extra passenger on the machine in comfort and security; thus a powerful sidecar outfit will easily accommodate two adults and two children, or even three adults and one child, together with the materials for a very substantial picnic. A light car, costing at least twice the amount, and almost doubly expensive to run, cannot provide the same seating capacity with the same overall performance; hence the undoubted popularity of the sidecar with the family man of moderate means.

Four-wheeled Cycle Cars.

LMOST unnoticed by the talking public, a regular boom in four-wheeled eycle cars has commenced. Scarcely a week passes but we notice additions to the list, and the output of Blériot Whippets alone is equal to that of one of our most popular light cars. The prices in most cases are reminiscent of the figures which were paid for small cars in 1914, but are generally within measurable distance of the present cost of a high-powered sidecar outfit de luxe, and, in some instances are very perceptibly lower. I do not find that these newcomers are being very largely bought by experienced motor cyclists; the customers are often comparative novices. Two things are needed to get motor cyclists seriously interested in the newcomers. The first is a severe public test of their road capacity, in which they should be isolated from small cars, instead of being overshadowed by far more costly and refined specifications. The second is less certain, and reflects my own personal views. Belts have lost ground, and the average experienced motor cyclist is slow to accept a heavy vehicle which embodies belts in its transmission. In many cases he sighs for greaterprotection than a sidecar affords; but he regards a Sturmey-Archer gear box and an all-chain drive as about the simplest type of transmission which he can accept. If he is wrong, he needs convincing of his error, and it will need strenuous public demonstration to do this.

The T.T.

AM in the Isle of Man with mixed feelings. What I had hoped was to see a duel à l'outrance between the cracks of two nations-Sunbeam, Norton, Scott. Rudge Triumph, A.B.C., and a host of others, battling it against a horde of lean, jerseyed Yankees on Indians and Harley-Davidsons. This is not to be, and I find no fault with the abstainers; this is not the time to subordinate production to advertisement. Still, I am disappointed. There are enough hotstuffers in the race to prevent its reminding one of Hamlet with no Prince of Denmark; but if the red Indians pull it off, I shall fall to wondering whether some of the absentee Britishers could not have put them through it; and if the Indians fall to the Sunbeams or Nortons, I shall speculate on what the Rudge or A.B.C. might have done, and whether Harleys could do better than Indians. So I can only regard this year's race as hors d'ouvres for next year's pièce de résistance. After all, hors d'œuvres are very interesting if one is hungry, and I have six years of T.T. hunger to satisfy; still, a year between snack and joint is rather a lengthy interval. Here's good luck to the best man.

Hobson's Choice.

EAR by year the old problem crops up of whether it is worth while taking a machine over to the Island. Some of us ride to Liverpool and leave the jigger in garage there against our return. Some of us shamefacedly go by train, thereby facilitating the crossing, and avoiding the horrors of carrying a 7-9 h.p. sidecar outfit across a 3ft. gangway, not to speak of up forty green and slimy steps if the tide is out; but contrariwise subjecting ourselves to the Manx train system for Island transport. Others, again, boldly take our machines, even if we only cross for the three days. We enjoy roaring about the Island on them, of course; but getting them there! And, worse still, getting them back! Ugh! The ideal is to have an extravagant pal, who nobly takes a racing car over, and puts a seat at one's disposal. Personally, on these occasions I wish I could unearth one of the medieval magician's wands. I should start for Liverpool on a 7-9 h.p.; convert it into a scooter on entering the Liverpool traffic; and transform it into a hog-'bus immediately after landing. [Why not have a magic carpet, and avoid mal de mer? Ed.]-

Sea Sickness.

THILST I am on this engaging topic, let me pen a special par for those unfortunates who cry "Kamerad" when the steamer enters the cross seas which meet a few miles outside Douglas. One of my colleagues has a very queasy tummy, and, keen motor cyclist as he is, nothing but the editor's most concentrated Prussianism ever got him over to the Island for years after his first heartrending voyage. Then some kindly person introduced him to a specific known as Mothersill, which is a sovereign remedy against sea sickness, and ought to contract for a full page advertisement in The Motor Cycle pre-T.T. issue. Unfortunately this good Samaritan handed him a few loose capsules without any book of the words, and our knight of the pen was unaware that Mothersill paralyses the stomach and prevents it flapping when at sea. Therefore, he failed to observe the necessary fast, and proceeded to fill his tummy with sausage and marmalade before paralysing it. The unparalysing of his hearty breakfast required the united efforts of two medicos on arrival at Douglas, and the victim obstinately remained in the Island after the races and implored us to appoint him as our permanent Manx correspondent. We got him back to Coventry by Mothersilling him on an empty stomach, and he now goes over quite gaily. Once he had to travel by the s.s. Fenella (which takes eight hours to cross), and the meal he ate on arrival is still talked of by the chef at the Hotel Sefton.

MULLION COVE. A summer tour of the coast of Cornwall would never be complete without a visit to the old Smugglers' Cove, near Mullion, that most fascinating and mysterious of all Cornwall's fishing villages. The miniature harbour, with its two little solid granite breakwaters, its black and yellow encircling cliffs, rugged and precipitous, are typical of the finest scenery of the Cornish coast. Mullion village, however, is situated a mile or so from its quanti little harbour, down a few miles of winding lanes, leading from the main Penzance-Lizard road through Helston, and is not particularly easy to find, but the inset map will help motor cyclists to locate the spot.

Climbing Longlands Hill, a feature of the open One Day Trial in Lakeland. Shapely Skiddaw rises finely behind.

An Interesting Run on a Morgan Through Little-known Hill Country.

By GEORGE D. ABRAHAM.

Author of "The Complete Mountaineer," "Motor Ways in Lakeland,"
"On Alpine Heights and British Crags," etc., etc.

EVER have the Lakeland roads borne such a tide of motorists. During the recent Whitsuntide holidays it was possible to stand on the loftiest of mountain tops and see far below, stretching from north to south, that long, tell-tale trail of dust cloud which hung from morn till night over the main highways. Yet on the by-roads, where surface and scenery are often of superior merit, the motor cycle and its compeer the sidecar or cycle car, were seldom in evidence. However, on occasion, even the most remote mountain recesses are stirred by the healthy murmur of the well-tuned engine. Just after the late holiday, the writer was fortunate enough to encounter the well-known Morgan enthusiast, Mr. Neils Svanso, who is always keen on penetrating into unknown corners in Lakeland. Machine and rider had recently been amongst the gold medals at the speed trials of the Liverpool Club, and it would be interesting to try the Morgan on some of the steep and tricky Cumbrian ways. Thus it was decided to visit that wild and unknown region to the north of the Lake Country known

as Skiddaw Forest, and, if possible, climb into the lofty wilds where lies hidden one of the strangest topographical curiosities in Great Britain. This is Skiddaw House, of which more later.

A wet morning did not augur well for our attack on some fearsome grassy gradients, but in the afternoon sunshine on quickly drying roads we sped swiftly along the wooded slopes with ravishing peeps of Bassenthwaite's gleaming waters seen far below. The main highway was left at High Side Farm, nearly six miles from Keswick, and on the right a steep climb brought down the pace of the Morgan considerably. This was not surprising, for a heavy load of three passengers and luggage was carried.

On the switchback highway left behind, the Morgan had shown its splendid speed powers, and there was full opportunity to enjoy the unique, smooth travel motion so curiously reminiscent of tobogganing days at the winter sports. So far, all had been top gear. But now we saw something of the sturdy little machine's power on steep, rough gradients. At one moment we were struggling up some loose scarp, at another plunging down rugged slopes into tree-clad gorges where sudden corners tried driver and machine to the utmost. Then up and outwards we would dash to more airy heights, 'twixt banks starred with stitchwort or agleam with geraniums and cowslips in yellow

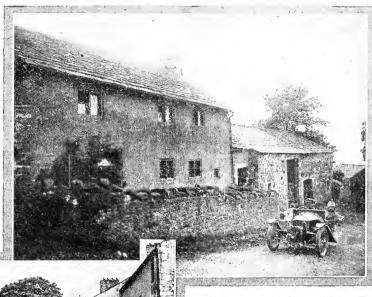

In Loneliest Lakeland .-

glory. Above us on the right, Skiddaw, here showing more shapely outlines than from Keswick Vale, towered loftily in grey gloom, which almost hid its massive form.

Somewhere up in the wilds on the right was hidden Skiddaw House, one of the objects of our trip, but we missed the proper turning to the right, and some distance ahead information was sought at the first farmhouse encountered in this out-of-the-world spot. The Cumbrian housewife and her son seemed to find great amusement in our idea of reaching Skiddaw

House on the Morgan. "What! Skiddaw House on that thing? Nivver, nivver, on that twisty fit-up!" said the matron of the mountains. We had heard similar prophecies on former occasions, but this time the prophet proved true. Conditions were against us from the start. Ultimately a slippery, turfy track led up for miles into the grey hills, but a long, steep, grassy gra-dent brought the Morgan hopelessly to rest, the wheel ploughing deep into the earth.

The usual plan is to walk this final section up beyond the savage rocks of Dead Crag and across the heathery foot hills—not a sign of man's handwork is in sight: nothing but moor and more moor, with purple mountains crouching near and far. The harsh croaking of the Dead Crag ravens softens with distance, and suddenly a rude fence and gate appear. Beyond this, and high up on the right, a white and grey-fronted house peeps out of a clump of stormshattered larches. It is a scene of utter lonesomeness: the sole evidence of life in the barren wastes is the startling call of disturbed grouse. This is Skiddaw

(Top) In the quaint old town of Ireby. The ancient cross, used for the sale of market produce. Ireby is noted as possessing a charter, and is the smallest market town in England.

(Bottom) John Peel's birthplace at Ruthwaite, near Ireby. The quaint old structure still stands by the roadside, and the kennels, where he kept his famous hounds, are behind the house.

House, the loneliest dwelling in England: a distinction thus awarded in a popular competition arranged a few years ago by a well-known daily paper. Moreover, it is the only house in the smallest parish or township of Great Britain, Skiddaw Forest. Despite the name, with the exception of a few ragged larches around the house, it is a treeless township. There is no church, no public-house, no post-office—nothing but the one valuation with one ratepayer, who assesses himself to the rates and taxes, and presumably sends them back to himself. The voter's list contains only one name,

In Loneliest Lakeland .-

and, failing the legal church door, it adorns that of the henhouse at a height above sea level of 1.650 feet. Numerous motors have unsuccessfully attempted the ascent to this noted place, but, given hard and dry conditions, the feat should be quite possible to the Morgan.

Thus we retired from the heights to the more normal surroundings of the secondary road leading on through John Peel's country. The route followed

from High Side Farm will be that used for the forthcoming open One Day Trial in Lakeland, which is to be the motoring event of the season in the North-It was of much west. interest to follow the difficult and twisty road, which will form the end of the day's run to Carlisle, finishing over Warnell Fell, and passing through Dalston. running leisurely through the strangely secluded valley, where almost unknown Overwater reposed, 'midst rich, flowery, and foliaged prettiness, a "tricky" hill, with an awkward corner of approach, lifted us once more to the heights. Then soon there came a sudden dip over into the depths, with a steep hill in full view on the other side rising to the lonely farmsteads known as Longlands.

Around a sharp corner a surprising watersplash lay in the gap between the two hills, and, ere the speedy little Morgan could be restrained, we were plunging through the water and careering up the opposite slope, wet but satisfied. After a photographic halt, the long climb up Longlands Hill was completed, and for miles the wide wild moors stretched ahead, with the thin white ribbon of road vanishing into the dim distance in the grey gloom of portending storm. Thus, before reaching Warnell Fell, a sharp turn was taken to the left and up to the crest of Aughertree. A long speed run, mostly on the easy down grade, led to Ireby.

The quaint little village, for such it really is, has achieved fame as being the smallest market town in England, and its curious old market cross is a popular pilgrimage for all lovers of ancient things. Also there was the Sun Inn to be visited, with its keen appeal to all sportsmen. There Robinson Bell, the genial grandson of John Peel, showed us a characteristic feature of the romantic region in which he lives: the famous relics of the Northern Nimrod.

Then with ominous storm clouds swathing the distant mass of Skiddaw

in gathering blackness, the return journey was begun by High Ireby. It is worth noting that the main route direct to Ruthwaite was in a very bad state, due to the heavy traffic from the barytes mine, which has been greatly developed through the war-time demand for this mineral. Ruthwaite was reached by the alternative route, and a halt made at the stormshattered dwelling where John Peel was born and lived for a goodly portion of his career. In former, more secluded times before the war and the mining ineverybody vasion. used to be related to the famous huntsman; nowadays we noted a more becoming modesty. It was

at the little grey house of Greenrigg on the moors near Caldbeck that Peel lived later in life, and it was there that the famous song was written by John Woodcock Graves in 1830, and set to music by William Metcalf, the choirmaster

Then, with sunset's rosy gleam breaking through the cloud pall over Western Lakeland; we climbed to the crest of Whitfield Hill, and thence by Castle Inn to Keswick, feeling that this remote but fascinating region of Northern England deserves more notice from all travellers, especially sporting motor cyclists, who revel in new scenes of unspoiled mountain loveliness.

At speed through the watersplash at Longlands Bottom. This awkwardly placed obstacle, situated between two very steep gradients, will be a notable new feature of the open One Day Trial in Lakeland on July 17th.

of Carlisle Cathedral.

The 'Scottish Six Days.

T a meeting of the Trials Committee, held on Monday, 7th inst., it was definitely decided, on account of the difficulty of obtaining accommodation, to omit Grantown, which previously was the finish of the fourth day in the Scottish Six Days Trial. Instead of spending the fourth night at Grantown the competitors will now go to Inverness, and on the fifth day return to Edinburgh by the main road, i.e., Kingussie, etc., to Pitlochry (lunch), by Ballinluig, Grantully, Weem, and over Kenmore Hill to Edinburgh.

The engine capacity limit for the manufacturers' team prize has been increased to 700 c.c.

The following is the result of the second ballot:

18.

20.

H. Mortimer Batten (3½ P. and M.*)
Godfreys, Ltd. (4 Indian Scont).
C. F. Plowman (4 Triumph).
J. Dias (3½ P. and M.*).
Claude Duncan (3½ Norton).
Ariels, Ltd. (4½ Ariel*).
Ariels, Ltd. (4½ Ariel*).
Alan B. Hill (3½ P. and M.*).
Hendee Mig. Co., Ltd. (4 Indian Scout).
P. W. Carter (6 A.J.S. sc.).
Alexander and Co. (8 Matchless sc.).
Ariels, Ltd. (4½ Ariel*).

25.

Ariels, Ltd. (41 Ariel*).

*Team entrants.

TNTIL quite recently I was just a motor cyclist's wife, his passenger and companion on many a glorious run; but now I am a motor cycling wife without that barrier of ignorance which sometimes isolates man and wife when anything goes wrong.

I now take my turn on the saddle. I understand some of the joys of-driving, and, what is just as important, my partner understands the monotony of non-stop hundred mile runs at speed when seated in the sidecar. He understands, too, that there are draughts in the sidecar from which one does not suffer while in the saddle, and that grit is thrown up from the front wheel. And I-well, I know enough now not to suggest that persistent trouble with the sidecar wheel has anything to do with the petrol

pipe breaking.

In short, I am now a motor cyclist, whereas for several years I have been merely sidecar ballast. I know now why it was inevitable that the old 31/2 h.p. sidecar outfit lost its interest when once the pleasures, of a big twin had been experienced. I have tried both, and, while the majority of ladies may consider the smaller size more suitable for a lady to drive, I know that the great reserve of power in a "big twin" allows one to make mistakes in engine driving. The bigger machine is easier to steer: at least, so I have found. One does not feel the tendency for the sidecar to lift on lefthand bends when a good solid coach-built affair is attached.

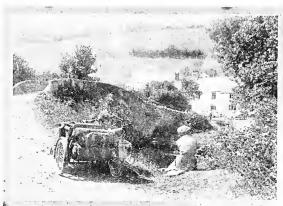

These points, however, are only inci-The great pleasure of the big machine is its ability to climb ordinary hills at speed. There is nothing more irritating-I know this now-than to have to change gear on ordinary main road hills. The undu-

Sharing the Driver's Seat.

lating roads, such as one strikes between Market Harborough and Oundle, are a real joy on a "big twin." The roads are across uplands, and a clear view is obtained on either side and a good way ahead, and a good average speed can be attained without danger. To sweep down a hill at a big speed, then just before the bottom is reached to "open out" and to sweep up the next hill, provides an exhibitration not comparable with any other. In the sidecar it is enjoyable enough, but on the saddle it is something to remember. My husband and I often go that way just for the love of the open road. To prevent any argument as to who shall be the driver, we have come to an arrangement that each has the saddle for alternate hundred miles by speedometer. Of course, the rule is not inflexible. If I feel tired, and am enjoying a "snooze" in the sidecar, my partner "carries on."

A Practice to be Encouraged,

Such a partnership as ours is not so general as it should be, for, among the thousands of sidecar couples, one does not often see the lady driving. Why is this? Is it because the majority of husbands will not take the trouble to teach their wives to drive? Or are

Touring without a definite object or set schedule permits one to rest awhile in those little known beauty spots which abound just off the beaten track.

Through Feminine Goggles,-

they so selfish as to want the major part of the pleasure themselves?

I have asked many motor cyclists how they like riding in the sidecar, and have generally received such replies as: "Bally monotonous: all right for a woman, you know!" I am afraid I do not know, but there seems to be an impression among men that ladies are quite content to sit for hour after hour doing nothing but admire the scenery. I once went from London to Newcastle-on-Tyne as a passenger. We took the Great North Road, which is particularly uninteresting, and I do not think my husband quite understood why I was so bored. He was interested in maintaining a set schedule, he had the engine to drive, the traffic to dodge, the milestones to watch, and other observations to make.

A Better Understanding.

Until I learnt the why, when, and wherefore of motor cycles, I was unable to share my husband's hobby, and, if harmony is to be maintained in a household, it is desirable that a man and his wife shall have a common interest. At one time I am afraid I was a little impatient when my husband spent several hours in the garage, but now I not only understand, but I understand enough to be of assistance. I know that he does not want a tyre lever to change a jet, or the big "King Dick" to remove the make-and-break apparatus. I used to think it was just a love for tinkering that made him take off the cylinders before we started on our annual tour, but now I know that decarbonising and valve grindling are wise preparations when a thousand miles lie ahead.

Although I say it myself, it is surprising what a large amount of assistance can be given by the motor cycling wife when it comes to overhauling, or even a puncture on the roads; and it is also surprising how much pleasure can be obtained by having a common interest in one's machine and those others that are met or overtaken.

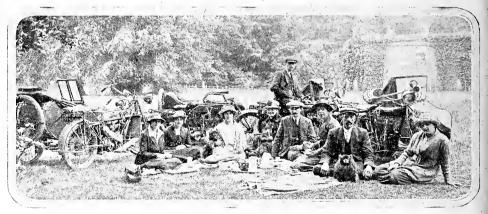

The Lady on Her Own,

There is also the advantage of being able occasionally to take out the machine on one's own, to call on a friend, or to take one's sister or mother for a run. Any motor cyclist's wife who becomes a motor cycling wife may find, at first, evidence of reluctance on the husband's part to allow the machine out without his attendance. When it has been proved that one can handle it properly, when the manipulation of the various levers becomes a matter of instinct instead of study, then this reluctance will disappear, and the ownership of the machine will truly become a partnership.

At one time I regarded a motor cycle merely as a means of transportation from one place to anothermost of the pleasure being in the object of the run. Now the real pleasure begins from the moment the clutch is let in, and, whether my husband or I am the driver for the day, I enjoy every minute of it. What is more, my interest in the machine and its behaviour adds to my partner's pleasures awheel, for I know now what it is to be merely the driver and to have for passenger one whose interests are confined to scenery and the millinery worn by ladies passed on the road.

I recommend that other motor cyclists' wives become motor cycling wives, and if they should be apathetic—then I appeal to their husbands. I mention this because I remember that I was not at all keen to become an amateur mechanic, and, as for driving, it seemed impossible that I should ever become proficient. Had it been a "two-seater,' of course it would have had a strong appeal—because, well—several friends drive two-seaters, but now I know that there is more fun in the saddle of a motor cycle than twiddling the wheel of a car.

One more hint. The equipment of a sidecar should include a camera, a picnic basket, a mirror, sponge, towel, and soap. The first allows one to obtain a pictorial record of the pleasures of the year, and in the winter time one then gets fireside motoring.

THE MOTOR CYCLISTS' P.CNIC. SECLUDED SPOTS ARE EASILY REACHED BY SIDECAR.

Reunions of old friends located miles apart are features of the summer runs of many motor cyclists. With a motor cycle one is able to "keep in touch," where otherwise friendship may die for want of transport facilities.

Motor Scooter Race.

It is proposed to include a two-lap motor scooter race in the programme of the Manchester Wheelers race meeting, to be held at Fallowfield on July 10th.

Motor Cyclists as Outriders.

Acting as outriders to H.R.H Prince Albert on his visit to Coventry last week were four motor cyclist special constables, who were in neat and uniform attire.

Motoring Princes.

H.R.H. Prince Henry, and his Equierry, Wing Commander Louis Greig, have become members of the Automobile Association. H.R.H. The Prince of Wales, and H.R.H. Prince Albert, Duke of York, are also members of the A.A., while the latter is patron of the A.C.U.

The Club Championship.

Twenty-seven teams have been entered for the M.C.C. Team Trial for The Motor Cycle Challenge Cup on Saturday, the 26th. The following are the clubs represented:

Motor Cycling Club (the organisers), Coventry and Warwickshire M.C. (the present holders), Waspes M.C., Ilkley M.C.C., North London M.C.C., Worcester and District M.C.C., Birmingham M.C.C., Kiddlersinster M.C.C., Middlesex M.C.C., Lotton Coldfield and North Birmingham A.C., Middlesex M.C.C., L.C.C., Public Schools M.C.C., Livroped M.C.C., Surbiton and District M.C.C., Luton and South Beds, A.C., Bedford and District M.C.C., Essex M.C., Leicester and District M.C.C., Essex M.C., Essex M

The Late Mr. J. C. N. Dickson-Hill.

At the inquest on this unfortunate rider, who passed away in Grantham hospital as the result of an accident at Gonerby on the occasion of the London-Edinburgh run, it was supposed that Mr. Dickson-Hill who was not travelling too fast, mistook a heap of Tarmac projecting too far into the roadway for the road itself. Beyond the Tarmac was a surface drain which sank six inches into the ground. The Coroner entered a verdict that the rider was killed by being thrown from his machine, but left it open as to whether the deceased ran over the heap of Tarmac which projected into the road. The Kesteven County Surveyor denies the fact that the Tarmac was the cause of

the accident, and pointed out that the heap of Tarmac showed no trace of wheel marks. The whole affair is inexpressibly sad. Mr. Dickson-Hill had had considerable experience as a motor cyclist.

H. B. Browning, hon, sec. of the Public Schools M.C.C. Loftus Hotel, Earls Court. S.W., desires to get_into communication with any competitor in the recent London-Edinburgh run who can give him any details regarding the accident to Mr. J. C. N. Dickson-Hill.

Imports and Exports.

The importation of motor cycles for May was greatly reduced compared with the previous month. Less than half the number of machines being imported.

MAY IMPORTS. 1913.

Number of motor 1913. 1919. 1920. cycles of motor 195 4 193 value, including accessories ... £14,123 £424 £23,910 Exports.

It is gratifying to observe our exports are on the up-grade, and although the increase is only 460 machines against April figures, it shows a desire on the part of manufacturers to regain our trade supremacy overseas; though fulfilment of the desire may be still a long way off.

MAY EXPORTS.

Number of motor cycles and accessories £89,607 £89,393 £168,082

Lost and Found.

Although at all times The Motor Cycle is willing to act as an intermediary between readers, the pressure on our space is so great that it is not always possible to mention all the articles lost and found. In future, therefore, we propose to publish particulars only of the latter. Our advertisement pages are available for those who desire to recover property they have lost.

have lost.
B. S. Ranford, Barnard's Green Road,
Malvern, lost a parcel containing a rubberstudded boot, a small dictionary, and
several sundries, which came admit from
his machine near Stroud or Nailsworth.

R. Rackham, 15, Park Villas, Byron Road, Wealdstone, has found three children's mackintoshes on the road near Rueby.

W. E. Price, Bushey View, Hampton Wick, recently lost his kick-starter crank from his Harley-Davidson in the Esher or Kingston district.

A toolbag containing spare valve, etc., has been lost between Kew and Farnham by C. Frank Hayman, 85, Gordon Road,

If the rider of a borrowed 4 h.p. Triumph, rider's letter XA, will apply

Special Features. LATEST T.T. NEWS. IN LONELIEST LAKELAND. THROUGH FEMININE GOGGLES.

at the garage to which he was recently towed by a Trimmph sidecar, he can obtain the valve cap taken in mistake by the cover of the letter

the owner of the latter.

Mr. H. L. Pawson, of 31, Stonegate,
York, writes that he wishes to get into
communication with the motor cyclist
who bonght a spare tube from him on
the road. The purchaser gave two £1
Treasury notes in mistake tor one, and
the error will be rectified if the party
concerned will write Mr. Pawson, giving
make of both machines and locality.

A tool kit was lost either at Bakewell or between Bakewell and Buxton on Whit-Sunday, by Mr. J. Griffiths, Woodville, Bramhall, Ches.

A canvas tool roll, containing some special spanners, was also dropped on the Salisbury road about four miles from Andover, on the 21st ult. Mr. E. H. Tindal Atkinson, C.B.E., "Redlands," Abbotsbury Dorset is the owner.

Abbotsbury, Dorset, is the owner.
Mr. R. P. Hornan, of Thames Cottage,
Thames Ditton, Surrey, left his vest
pocket camera on the grass at Wisley
Hut on Whit-Sunday.

We are informed by Mr. E. E. Holloway, hon, sec. of the Liverpool M.C., that a pair of motoring gloves and a camera case were found on the occasion of the club's open speed trials, and are now in his possession.

An Indian owner, H. Cordwell, Park Leigh, Alexander Road South, Manchester, wishes to return a King Dick spanner inadvertently picked up after helping a fellow motor cyclist at Pentre Voelas.

Week-end Petrol.

In view of the large number of motorists now using the roads during weekends, the A.A. recently communicated with over 3,000 garages holding the A.A. appointment in various parts of the country, urging the desirability of having some responsible employee available for meeting the requirements of passing motorists for whom Sunday is often the only day of the week that they can use the road. Most garages will do this.

Obstruction by Chars-a-banes.

Recently a char-a-bane driver was summoned at Doncaster for exceeding the limit of 12 m.p.h. for heavy vehicles, dangerous driving, and obstruction. The complainant was a solicitor, whose car was kept behind the char-a-bane for a considerable distance. The driver was fined £5 on each count.

REMINISCENCES OF A SPORTING TRIAL.

Jottings from Our Observers' Notes supon the Mountaineering Open Trial of the Ilkley L.C. and M.C.C.

OOD brakes, a powerful engine, a keen eye, and a steady hand are essentials if one is to bring a machine through to time, in a trial such as the Ilkley club places before competi-

R. T. Cawthorn put up a really won-derful performance by bringing his Autoglider into each check on time. The teat speaks wonders for both man and machine, but we wonder if many lady

Although the trial was perhaps rather too stiff for those who are not accustomed to such country, there was no test in-cluded which could not be accomplished by a good machine and a careful driver.

The only grumble we heard was that there were not enough people to push on the hills, but the organisers would have needed an army to supply only a few to

each single figure gradient.

At the time of going to press it is believed that the Ilkley club was the only one to get home a complete team without loss of marks.

Guy (Scott) punctured within ten miles of tes start, but regained his place in the line just after Skipton.

The M.A.G. Morgan, driven by J. R. Sylvester, climbed splendidly, but the loose surface proved fatal to his non-stop record.

Mr. A. A. Scott was an interested observer at the top of White Shaw Moss, whither he had come on an experimental

whither ne and Scott sociable. Scott whernside, Great Whernside, one to most Whernside, Great Whernside, Ingle-borough, and Pen-y-Ghent to most people are names in a school geography book, mythical mountains, dim reminiscences. To the competitors in the Ilkley trial the flanks of those hills, which were climbed and reclimbed, will now be a grim remini-

In the Yorkshire Wilds.

The route led by the shores of Semmer Water and Malham Tarn—the only natural lakes in Yorkshire. The latter is the source of the River Aine, while the former is situated in an inaccessible valley. Tradition has it that a city lies beneath the waters, which arose at the curse of a pilgrim who was refused shelter there.

Several competitors fell in the shingle at the edge of Semmer Water, Hugh Gibson amongst them.

One or two sportsmen made valiant efforts to get through on old pattern hubgeared machines, and succeeded, with sundry restarts on the hills.

Despite the fact that the course was unquestionably more severe than that of any previous one-day open trial in the history of English motor cycle competi-

tions, the percentage of private owners was greater than we have ever seen; moreover, everyone was cheerful about the difficulties.

It was essentially a solo trial, for the sidecars could not obtain wheel grip on the loose surface of such hills as The Stake, Park Rash, and White Shaw Moss, the gradients of which all approach 1 in 4.

Burnsall, where the tea stop and acceleration test were held, is, by popular vote, the second prettiest village in Yorkshire.

Hugh Gibson and F. E. Palmer on 2½ h.p. Clyno lightweights, and G. W. Wilkin on a 2¾ h.p. Wilkin, did wonderfully well in covering the course in the way they did on such small machines.

It is seldom that the famous Lakeland It is serious that the famous passenand hill-climber, W. Westwood, appears unhappy on a bad gradient, but it was "touch and go" with his Triumph for a few moments on White Shaw Mose.

The arrowing of the course was excel-lent, and the system of using red and blue arrows for right and left-hand bends and a black arrow for straight on proved very helpful on such a tricky and unfrequented course.

One competitor entered a 1910 Triumph with a Jardine two-speed gear. Paraffin was the fuel employed, but the test was not very satisfactory.

IN THE SCOTTISH LOWLANDS.

The First Reliability Trial of the Peebles and Tweed Valley M.C.C.

PEEBLES is perhaps most famous as a Scottish touring centre, and the Peebles and Tweed Valley M.C.C. with every variety of mountain road and Lowland scenery at its disposal, bids fair to hold a foremost place among Northern

motor cycle clubs. The route chosen for its first reliability trial, which was held on June 5th, was not a very severe one, as it was the desire of the trials' committee to encourage new riders. Leaving Peebles the competitors passed by Innerleithen and up Paddy Slacks—a long, trying route lay via the Devil's Beef Tub, so lightly dismissed by the London-Edin-

burgh, and Drumelzier (check) to Peebles.
Only one competitor failed on Paddy Slacks. Claude Duncan, on a Brooklands Norton, took it at speed, and the Douglas machines all made steady ascents. Robertson (4 Triumph) fell out shortly after, owing to ignition troubles, and Rutlidge (P. and M.) tore off his back tyre, Birnie (3½ Rudge) also retired ere St. Mary's Loch was reached, and here the road became very had in parts, owing to the loose stones displaced by sheep. Outside Moffatt, Ketchen (4½ B.S.A. sc.) developed magneto troubles, but managed to finish, while at the Devil's Beef Tub, J. Morton Roberts, who was wisely carry-ing his chauffeur in the sidecar of his Sunbeam, also experienced tyre troubles.

Twisting Roads and Low Average.

Quite a large number of riders had clean sheets up to the last check at Drumelzier, and thence they were pro-ceeding home with confident leisure by the tortuous valley road when a glance at their watches nearing Peebles surprised the great majority. This last check, indeed, was the knock-out of the trial, for though the road appears easy and the surface is good, the officials evidently realised its deceptive nature, and the difficulty of maintaining the legal 20 m.p.h. over it. Satisfaction was expressed, both as regards the route chosen and the organisa tion, for which H. M. Batten and J. M. Russell, the captain and vice-captain, were responsible. Results:

First Class Awards .- W. S. Dickman First Class Awards.—W. S. Dickman (4 Triumph), C. R. Duncan (B.R.S. Norton), A. Mathison (4 Coulson B.), J. Veitch (6 A.J.S. sc.), J. Hush (23 Douglas), and W. C. Pearce (35 Humber). Second Class Awards (lost under five marks).—J. C. Hume (35 Sunbeam sc.) and J. Ker-Paisley (35 Triumph).

Third Class Awards (lost over five and under fifteen marks).—W. Parsell (4)

under fifteen marks).—W. Russell (4 Douglas sc.), Miss N. Dougall (23 New Imperial), Russell D. Mack (24 Victoria).

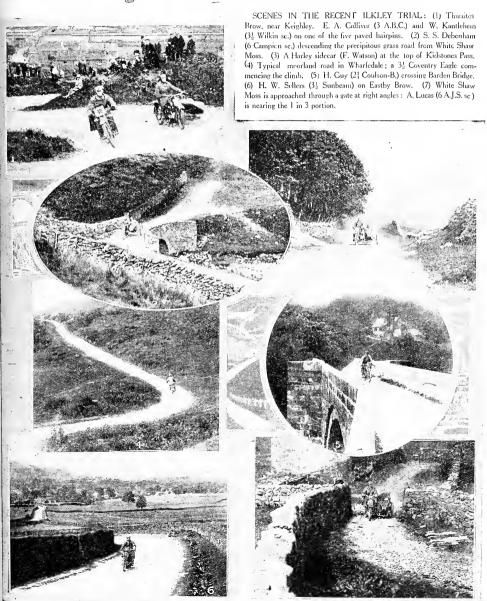

and H. H. Runciman (31 Triumph sc.). The lady competitor is to be congratulated, and we would suggest that the trials committee of other new clubs would do well to adopt the same measures, by choosing for their opening event an interesting and attractive, rather than a strenuous route, and by being as liberal as their finances permit as regards awards. In this case tyres and other useful equipment are to be given.

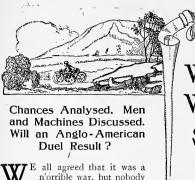

SHOULD BELTS RUN IN ONE DIRECTION P

R ECENTLY a number of expert motor cyclists were discussing transmission, and amongst other things it was suggested that rubber and canvas belts should always be replaced on the pulleys so that the direction of running should not be reversed.

One rider asserted that on his machine the belt refused to stay on the pulleys at all if put on in the opposite way, and another reminded the party that at one time it was customary to find belts with an arrow impressed to show the running direction. A belt maker's representative who was drawn into the argument con-sidered that the running direction was immaterial, while the wear on the belt ends was equalised by occasionally reversing it. What do other practical riders say?

A Rough Rider's Trial in Yorkshire.

E all agreed that it was a n'ortible war, but nobody held this opinion more firmly than the tame tipster of The Motor Cycle staff. His self-felicitations on Armistice Day at not having stopped one were more than balanced by the long fore-seen ordeal of having to find a winner for the 1920 T.T. with no public form later than 1914 to help him.

Do not talk to me, please, about those nasty little beach sprints of

a paltry kilometre or so. I have won such potty little dashes myself in my time; but between a half-minute burble on full throttle and a four-hour skelter round the Manx turns, there is nothing in common, whether we consider the machine or the man who rides it. Moreover, with only twenty-nine riders, distributed over no mote than seven different makes, nobody will feel a shred of pity for me if my final guess proves wide of the mark.

Possibilities of Individual Entries.

If any of our readers are turfites in the intervals of waiting for delivery or mending punctures, let them picture what Captain Coe would say if he was asked to spot the winner of the 1922 Derby before any of the entries had made their début as two year olds.

Turning with a sbrug of despair to the entry list, we may take it for granted that any makers who have decided to enter this year mean business in dead earnest, for they would hardly face the outlay and reduction of output unless they were pretty confident

they could win.

Of the seven makes entered, two do not appear to have any very energetic factory backing. A pair of A.B.C. machines are entered by individuals. Without being unkind, we will rule them out: first, since the machine is new, and a lot of long-distance work is needed to get a jigger staunch enough to stand 225 miles of the Manx buffeting; secondly, because the A.B.C. people are never half-hearted, and if they were behind these entries, there would be more than two of them.

For rather similar reasons I shall venture to strike out the 3½ h.p. Douglas. I see it is entered by one of the principal Douglas agents, and ridden by the

redoubtable A.H. himself. He might win; but if a solitary entry without solid factory support beats teams so thoroughly organised as the trio who absorb the bulk of the entry, his skill and luck would approach the miraculous.

Two further makes are trade entries, but are what my bridge-playing friends call singletons. One is Davies's A.J.S., the other is the Duzmo. We all know that the Duzmo engine goes baldheaded for all the hotstuff elements in speed design, and that when it is out for blood, it can make the best of them hop. But it is playing a lone hand in the Island, and, like

the A.B.C., it is rather young to win. It has the vantage of an old head, in the saddle, I was going to say, though I am not Irish—what I mean is that Le Vack will get the best out of it. Still, he cannot carry my money this year against the three big teams. Next year, perhaps, when he is backed up by three or four sister machines, so that one of them may skim the cream off the luck; but not in 1920.

The A.J.S. entry is rather more formidable. True, it is only a little engine, but 2½ h.p. can produce all the speed which the course can carry, except, perhaps, uphill, and then Davies has won his spurs over the T.T. course; a fast man; a steady man; not so young as he was, but the type which wears. This entry is puzzling. I am inclined to think that the A.J.S. people said to themselves, "Given a clean run, the little 'un is fast enough to give the big fellows as good as it gets. One more entry fee will not hurt, us, and if we are beaten by bigger engines, it does us no harm." I regard this entry as a sporting gamble, and fancy the A.J.S. people expect to finish well up, but would be startled if they won. So the pen goes through this entry too, and leaves the way clear to discuss the three big teams—five Sunbeams, five Indians, and fourteen Nortons.

A Standard Specification.

Nortons have always been formidable at Brooklands, though they have never yet played the expected part in the T.T. The fact that fourteen of them are entered suggests that no very intensive culture has been devoted to the Manx machines. The firm have evidently taken the line that their standard sports model, suitably adapted, is more than fast enough to win. They must have ignored some of the niceties

CET READY! 5-4-3-2-1. GO! The T.T. rider, awaiting the word to go, experiences sensations unlike those at the start of any other form of motor cycle event.

Who will Win the Senior T.T. ?-

with which other designers busy themselves in trying to produce a special engine for a special job; those engines cost too much and change too often during development for any one factory to deliver fourteen of them on the eve of a race.

But for two factors I would dismiss the entire Norton team from consideration for first honours. I consider three ''specials,'' prepared by good men, ought to beat six ''stocks '' prepared by equally good men every time. But with fourteen representatives you get more than your mathematical share of the luck; and when practically all the riders in the race are dark horses-for the T.T. is a young man's game, and it is six years since the last race—fourteen jockeys afford a big chance of discovering another Godfrey or Pullin. If there were only five Nortons entered, I would risk my credit by saving a Norton will not come in first, though the team will perform up to the high reputation of the machine. With fourteen entered, I am going to say just the same; but I don't like allowing so formidable a coterie to run unbacked. Let me add that a Norton win would be tremendously popular.

Wolverhampton v. America.

My previous analysis will have made it quite clear that I place the issue between the Sunbeam and Indian teams. I shall be genuinely surprised if one of these nine fails to win outright. None of the men can be said to have any public form. Eric Williams is years older than when he made his name in the Island. The pace will be hotter than ever, and it is doubtful whether even he himself can yet say if he is a better man than he used to be, or the reverse. If he was a shade inclined to take foolish risks in the old days Anno Domini may just have steadied him down so that to-day will find him on the absolute top-notch of his form.

Dance has an unrivalled name in short sprint work. Short sprint work is all to the good. It gives a man nerve. It accustoms him to the sensations of speed. It teaches him how to steer. But, hy itself, it never won a T.T. Balanced by restraint and a cool head it produces the top-notcher. But the man who is a

sheer sprint merchant and nothing more is lost in the Island. Nor can any of us be quite sure of this till the day.

Some men are brilliant bats at the nets, but never yet made a century in a big match. Dance will presumably start favourite, and nobody will be more pleased than myself if he wins outright; for, if he is as good at the long game as he is at the short game, we have got the Indians beaten; and my old friend, W. H. Wells, will quite understand that, as a Britisher, I am not keen on seeing a red tank finish first.

I know that the Springfield people were remarkably hot-stuff at the racing game before they annexed C. B. Franklin (I warn W. H. Wells that if his vermilion team swoop the first five places I shall shriek that C. B. Franklin is the wizard behind them).

Watch the Simple Engine.

On the other hand, for a four hour bump round the Island give me something as simple and substantial as possible.

There is less to go wrong about a single, and the race is quite likely to be so tight that a few seconds on the concluding laps may settle it. I feel no real confidence, but I am prepared to back the five Sunheams against the five Indians, and I feel heartened to think that there are a score of doughty, if "unexpected," Britishers supporting the Sunheam. Cowardly, when you come to think of it, that I don't feel more sympathy with the plucky Indians in their odds of five versus twenty-four.

I have to write this before I have had a chance to cock my eagle eye at any practising in the Island. After two or three chilly mornings up in the Snaefell mists I may be prepared to go a step further and name a Sunbeam merchant as my absolute tip to win cutright. Until I have seen Townshend, Dance, and de la Hay on the course, I daren't go further than to back them against the field; and shan't I just look silly about tea time.

T.T REPORT.

A detailed account of the Tourist Trophy Races, with many exclusive illustrations, will appear in *The Motor Cycle* next Thursday,

The Blue Riband of the Motor Cycle World.

Lap Times and Winners in Previous Competitions Details of To-day's Great Race. for the Senior Tourist Trophy.

To-DAY the classic event of the motor cycle world is decided cycle world is decided. At 9.30 a.m. the first competitor in the Senior Tourist Trophy-will be sent away on the first of six circuits of a course chosen to bring out the most desirable features in the durable motor cycle for the man who would ride in ease and comfort without fear of mechanical trouble. The long distance road racing machine of to-day is the parent of the touring machine of to-morrow.

Every motor eyelist in this country and overseas will hope that the best man on the best machine will win, and that the fickle goddess of luck will be content to play a minor part.

PREVIOUS WINNERS.

1914. Cyril G. Pullin, single-cyl. Rudge (85 × 88 mm.=

499 c.c.), 49.4 ni.p.h. 1913. H. O. Wood, 2-cyl. 2-str. Scott (69.8 × 62.5 mm. = 486 c.c.), 48.2 m.p.h.

Date and Time of Start: 9.30 a.m.,

Thursday, June 17th, 1920. Distance: Six circuits of 37 miles 6 furlongs each. Total distance, 226 miles 4 furlongs.

Prizes: First, the Senior T.T. Trophy. to be held for one year, £50 in cash and special gold medal; second, £25; third, £15.

Team Prize: To be won by a nominated team, who must all finish the course within thirty minutes of the winner.

THE 1914 SENIOR RACE.

AVERAGE SPEED OF THE FIRST FOUR . FINISHERS.

I. Cyril G. Pullin (Rudge), 49.4 m.p.h.

[H. R. Davies (Sunbeam) tied] 48.39 m.p.h.

THE NISBET AWARD.

S a memorial to the late Chairman of the A.C.U., Mr. J. R. Nisbet, the stewards will be empowered to grant the Nisbet award to such competitor or competitors who, in their opinion, exhibit such pluck and endurance, or such capacity, to triumph over difficulties as to deserve special recognition. The continuance in the race by a competitor suffering from severe injury will not be deemed a qualification for the award.

Nottingham and District M.C. and L.C.C.

An inter-club meet will be held at Dovedale on the 20th inst. There will be a picnic lunch and tea, and walking partics arranged to the adjacent beauty spots during the afternoon. All motor

North Cheshire M.C.C.

Two watersplashes and several stiff hills were included in the 70 mile reliability trial held on the 6th inst. The winner was S. T. Holland (23 Clyno), who made a fine performance on all observed hills, and was dead on time at all checks. O. Jessop (3½ Triumph) was second, and A. Booth (5-6 Indian) third.

J.B. (Liverpool) M.C.C.

J.B. (Liverpool) M.C.C.
On the 2nd inst. this club held a speed-judging competition over a secret two-lap course of seven miles. Nineteen members turned out, and the event proved very successful. H. T. Williams (6 A.J.S. sc.) secured first place with Im. 1s. error, while N. E. Williams (8 Zenith sc.) was second, and A. Bromhead (8 Matchless sc.) third.

M.C.C.

The seventh annual race meeting of the above club will be held at Brook-lands on July 10th. Nine events will be run, including scratch and handicap races for all classes of motor cycles, and also three light car and car events. A club championship race of ten laps, open to the first seven in each of the three solo handicaps, will be the principal feature of the motor cycle programme.

Neath and District M.C.

A large crowd of spectators witnessed the hill-climb at Crynant on the 5th the hilf-climb at Crynant on the 5th inst. over a course just under a mile in length. The results were as follow: General 250 c.c.: C. Salway (24 Levis), Im. 42\(\frac{1}{2}\)s. 350 c.c.: T. Thomas (2\(\frac{1}{2}\)s. Wooler), Im. 35\(\frac{1}{2}\)s. 500 c.c.: I. Thomas (3\(\frac{1}{2}\)Trimmph), Im. 7\(\frac{2}{3}\)s. 750 c.c.: A. L. Cranch (5 Rover), Im. 4\(\frac{3}{2}\)s. In 1,000 c.c.: S. Bush (7-9 Indian), Im. 7\(\frac{2}{3}\)s. Expert 500 c.c.: J. Thomas (3\(\frac{1}{2}\)Norton), Im. 4\(\frac{3}{2}\)s. 750 c.c.: J. Thomas (3\(\frac{1}{2}\)Norton), Im. 3\(\frac{3}{2}\)s.

Manchester M.C.

Some good performances were made at the hill-climb held on the 6th inst. at Heydon Bridge. The weather was fine, and good entries were received in all classes. Results: Class 1.—1st, S. all classes. Results: Class 1.—1st, S. A. Crabtree (2\frac{2}{4}\) Sunbeam; 2nd, G. E. Cowley (2\frac{2}{4}\) Douglas); 3rd, W. Cottrell (2\frac{1}{4}\) Levis). Class 2.—1st, R. Smethurst (3\frac{1}{2}\) Norton); 2nd, J. H. S. Gardner (4 Triumph); 3rd, E. F. Gunton (3\frac{1}{4}\) Duzmo). Class 3.—1st, E. F. Gunton and R. Smethurst tied; 3rd, J. H. S. Gardner (4 Triumph). Class 4.—1st, O. E. Carter (3\frac{1}{4}\) O.K.—J.A.P.); 2nd, H. Taylor (6 Bradbury); 3rd, G. E. Calf (3-10 Henderson). (8-10 Henderson).

TRIAL FOR "THE MOTOR CYCLE"
CHALLENGE CT. ******************************

Westmorland M.C.C.

Some clever riding was witnessed in the recent flexibility trial held at Hawkeshead. The average gradient of the half-mile course was 1 in 6, including two S bends. The best performance was made by R. Harrison (7-9 Indian), with B: Hill (Velocette) second.

Birmingham M.C.C.

Starting from Birmingham at 2.30 p.m. on July 3rd, a week-end touring trial will be held to Llangollen, returning the following afternoon. Three solo and three sidecar classes have been arranged; gold, silver, and bronze medals will be awarded in each class, and marks given will count towards the hest aggregate performance of the year for the Austin Challenge Cup and Autocycle Trophy.

Shrewsbury and District M.C.C.

An amalgamation of the motor cycling clubs in the Shrewsbury district took clubs in the Shrewsbury district took place recently, and a new club, under the above title, formed. The hon. secretary, Mr. L. D. Hughes, will be glad to hear from intending members at the Old Post Office Hotel, Shrews-

Warrington M.C.

All classes of motor cycles, three-wheelers, and light cars up to 1,500 c.c. are eligible to compete in the 180 mile reliability trial for the Melbonne Challenge Bowl on July 37d. There is no entrance fee, but all competitors must become members of the club. ticulars of the event can be had from Mr. H. Aldred, 58, Church St., Warrington.

Stockport and District M.C.

The results of the recent reliability The results of the recent reliability trial held by the above clnb were as follow: 1st, T. Davis (Royal Ruby); 2nd, W. Preston (Sunbeam); 3rd, H. Hudson (Scale). Miss Cowley (Donglas) was awarded a prize for a very meritorious performance. The above results are subject to the approval of the committee.

Lincolnshire M.C.C.

Over sixty entries were received in the speed trials held recently in Thonock Park, Gainsborough. The course was half a mile in length, with a flying pail a mile in length, with a flying start, and the winners on formula were as follow: 350 c.c., Mrs. M. C. Jennison (Velocette). 550 c.c., J. S. Plastow (A.B.C.). Over 750 c.c., J. Margrave (Harley-Davidson). Unlimited, J. S. Plastow (A.B.C.). Unlimited sidecars, A. W. Grocock (8 Zenith sc.). J. S. Plastow (A.B.C.) and the best performance of the control of the c S. Plastow (A.B.C.) made the best per-formance of the day.

Surbiton and District M.C.C.

The result of the "All-comers" Handicap held at Brooklands on the 28th ult. was as follows: On Handicap.— First (Dr. Low Cup and gold medal), F. R. Spikins (8 Harley-Davidson); second (gold medal), R. Deguin (6 Zenith sc.); third (silver medal), W. D. Hawkes (10 Morgan). Silver medals for fastest machine in class: 350 c.c., T. Simpson (Mctro-Tyler); 500 c.c., R. Green (Norton); 750 c.c., D. Davidson (Harley-Davidson); 1,000 c.c., L. Gummer (Zenith): 1,000 c. (sildears) F. C. Davidson); 1,000 c.c. L. Gummer (Zenith); 1,000 c.c. (sidecars), E. C. Baragwanath (Zenith sc.).

Southend and District A.C.

Five motor cycle events were included in the recent hill-climb held at Thundersin the recent hill-climb held at Thunders-ley Church Hill, the results being as follow: 350 c.c.—Formula, N. A. Lave (2½ Diamond); time, L. J. Lave (2½ Douglas), 500 c.c.—Formula and time, R. G. Comber (3½ Sunbeam). Over 500 c.c.—Formula, R. G. Picking (4 Triumph); time, T. C. Halley (4 Triumph). Scooters.—Formula (unannounced) and time, W. J. Startin (A.B.C. Skootamota). Three-wheelers and sidecars.—Formula, W. A. Webb (4 A.S.C.); time, Major A. Biddle (8 Roval Enfeld). Royal Enfield).

compliment to those who, in 1913, won so well for England. Several of the old riders

are able and keen to go over, and the above must be my excuse—as one of them—for making the suggestion.

FRANK A. HARDY.

A DOUGLAS HINT.

Sir,-Those of your readers who ride 1920 4 h.p. Douglas snip—those of your readers who ride 1920 4 h.p. Douglas motor cycles may be interested in the following experience.

After running about 300 miles, my machine started a slight squeak, developing later into a very audible screech, which I was mable to trace. Since I had obeyed the makers' instructions as to lubrication most carefully, I was completely baffled. However, on spec. I injected two gun-

this completely cured the fault. I now inject one gunful every 100 miles, instead of half a gunful every 400 miles as the makers advise.

Houghton.

AMERICAN CARS WITH LEFT-HAND DRIVE.

Sir,-May I give an instance of the risk attached to overtaking an American van with left side drive?

Recently I was about to overtake a Ford van, and blew my horn. The driver moved over to the left in order, as I thought, to allow me to pass, but instead of that he suddenly crossed over and went down a side road. Luckily my brakes were good, and I only skidded on to the grass at the corner.

My point is this—that our mode of signals is no use whatever when the drive is on the left-hand side, and I think that this type of drive ought to be prohibited.

Oxford.

the Editor, "The Motor Cycle," Hertford Street, Coventry, and must he accompanied by the writer's

POLICE PERSECUTION.

Sir,—Replying to Mr. Measures's letter re 'Police Persecution' in your issue of June 3rd, I entirely fail to see where his grievance lies. I presume he is aware that, by law, motor cyclists should have proper silencers, must have number plates with letters of readable size, must carry licences, etc. Unless motor cyclists are occasionally stopped on the road, how are the police to find out if these regulations are It these regulations are properly carried out? But I imagine Mr. Measures's letter is "rote sarcastick," and is a justifiable gibe at those road hogs who think they can tear about the

public roads at any pace they like without any restrictions whatever. I may add that I am a motor cyclist myself, but a law-abiding one.

F. PENNINGTON. a law-abiding one.

THE COST OF MOTOR CYCLING.

Sir,-Can one of your readers, through the medium of your valuable paper, give me some idea of the cost of running a machine for business purposes under the following conditions:

The machine to be a first-rate 4 h.p. single, costing, say,

The balance-sheet to extend over the whole period of the life of the machine, which is to be taken to be the total mileage run (before the machine becomes uneconomical owing to excessive wear) divided by eighty miles per week. The machine will be run mostly in fine weather on good roads and under a "sympathetic" driver. The following are the chief items in the account:

DEBIT. Petrol at current prices.
Oil at current prices.
Tyres.
Repairs. Insurance.

Tax. Other expenses (not garaging). Prime cost of machine. Interest at 5% on above.

CREDIT.
Total mileage multiplied by 1½d.
per mile multiplied by 1½d.
5% on the above for "trps," incidentals, etc.
The value of the old machine on
the assumption that it is taken
in part exchange for a new one
by the same maker.

If there are any points that I have overlooked I should be glad if attention could be drawn to them. J. P. C. DONE.

CII

Sir,-I should be glad if you would allow me through your columns to call attention to the state of affairs at Ulverston. Motorists are pulled up and fined for the least offence. My special reason for writing is concerning a recently imposed fine of £10 and costs against myself for "driving to the danger of the public" (according to their idea), but I can swear I was not travelling twenty, and they rated it at thirty-five. I pulled up in eight or nine yards.

This will show you how they treat us in the Furness

district. It is not only an excessive fine, it is an insult, and I think should be appealed against by all unions for future THE VICTIM. comfort.

Barrow-in-Furness.

REUNION OF EX-D.R.'S.

Sir,-I would suggest a meeting of old D.R.'s somewhere in the neighbourhood of the D.S.D., when a general idea could be made from the gathering as to the possibility of forming an Old D.R.'s Association.

The first Sunday in July-say at the monument in Ashridge Park, or Mentmore Park, would be quite a suitable rendezvous.

C. SMITH (late Sgt., R.E.). rendezvous.

PORTABLE HAND CLEANER.

Sir,-In a recent number of your paper, "Ixion" touches another sensitive (particularly so to some) spot when he speaks of the need of some portable hand cleaner.

Having at last entirely satisfactorily met this difficulty through the ideas and assistance of my "regular passenger," I hasten to offer her excellent recipe to any who disapprove of arriving at their destination "in oil": 1 lb. soft soap, I lb. whitening (both to be obtained at any grocer's or iron-monger's), and \(\frac{1}{2}\) lb. clean sand. Mix thoroughly in an old saucepan with just sufficient water to cover, and then bring to a boil and allow to simmer for twenty minutes. cool, it should be of soft pasty consistency, and if placed in airtight tins or jars will remain so. If too dry, use more water, or if in keeping it gets hard add water and perhapsaa little more soap, and boil up again.

I have found this most effective, cleaning out all cracks

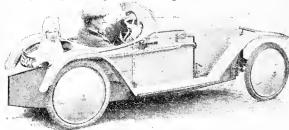

and crevices in the hands without in any way making them rough-in fact, the contrary is the case-so that now a small tin is always part of my equipment, and at the end of even a troublesome trip I can "shake" quite as readily as my passenger. QUADRANT.

Aberavon, Port Talbot.

Sir,—Apropos the paragraph "A Portable Hand Cleaner" in a recent issue of The Motor Cycle, do you remember the liquid soap called Lyxavon? It used to be put up in 6d. and is this by the Lyxavon Co., of Prospect Place, Barnsbury, but seems to have been off the market since the beginning of the war. I do not think it was ever advertised extensively.

In my opinion, it was the only grease and dirt-removing soap-whether solid or liquid-worth looking at. (and the smell of it) could be removed at one washing with either hot or cold water, and that is about the best test of all. One of its other good points was that in emergency it could be used without water at all, simply by using a slightly larger dose than usual and then wiping it off with a piece

I used to make a point of carrying a small tin filled with it in my toolbag, and using water from the generator if no

A neat monocar built by Mr. S. E. Walker, of Sleaford. It is fitted with an 8 h.p. J.A.P. engine, a two-speed gear box, and chain-cum-belt transmission.

other was handy for a final rinse. It also had no bad effect on the skin, and was once even used for shaving in preference to hotel soap when the Vinolia powder was accidentally left at home.

I should like to see it on sale again, because it was really good, so perhaps this may "ginger up" the manufacturers to get going again.

Coventry

BRITISH V. GERMAN PLUGS.

Sir,—As manufacturers of sparking plugs we were interested in the letter signed by "An Old Hand," re plug

We are open to send him two of our plugs, on receipt of the particulars of his engine, which will stand up equal if not better than the "Bosch"—and, further, we are open for his report to be published in the same column, as we are anxious to show that an English manufacturer can make a plug as good as any foreign make.

HOWARD S. COOKE AND CO.

DATES OF SECOND-HAND MACHINES.

Sir,-Recently I journeyed from Manchester to Preston to inspect a machine advertised as a 1920 model. Fortunately, I have sufficient knowledge about motor cycles to recognise I have suniceen knowledge about motor cycles to recognise their approximate age. On examining the machine, I found that it was certainly not later than 1915 model, but that the seller was attempting to sell it as a 1920. The journey involved me in some expense; besides the waste of time, and had I not known something about machines I might have been health wisled. been badly misled.

I think that this practice is very greatly against the interests of the trade, both from the buyer's point of view and the seller's, and that every possible means should be

taken to suppress this type of procedure.

Manchester. DISGUSTED. [This practice is very rare, but we have frequently warned our readers to make sure of dates before purchase so as to avoid disappointment. In many cases the misrepresentation is due to ignorance rather than design .- ED.]

INTER-'VARSITY HILL-CLIMB.

Sir,-With reference to the action of the Buckinghamshire police in stopping the Inter-Varsity motor cycle hill-climb at Kop Hill, Princes Risborough, on Sunday, June 6th, may we claim the hospitality of your columns to lodge a protest against the methods adopted by them?

a protest against the methods adopted by them? In the first place, no objection was raised by the same police in the case of the last Inter-Varsity hill-climb held at Aston Clinton on March 7th last, although the two cases are absolutely parallel. Both these climbs had been fixed for Sundays, as it is quite impossible for the two Universities to assemble on a week day.

Secondly, in the correspondence between the Secretary of the Oxford club and the Chief Constable of Buckinghamshire although it was intimated that a week day would be

shire, although it was intimated that a week day would be preferable, no refusal for a Sunday climb was either stated pretends, in crusal to a Sunday thin was refuel sacrated or implied. The police stopped the climb on the ground that the speed limit of 20 m.p.h. was being exceeded. Why should an objection be raised to breaking the law on Sinday the state of the state day, when the police are ready to connive at it on a week/ day? If their intention was to stop the climb in any case, they had three clear days in which to notify us—a course which would have saved both our visitors and ourselves

considerable expense and inconvenience. Actually no effort was made by the police to appear on the scene, in spite of notification of time and place until fully one and a half hours after the

commencement of the event.

J. E. G. HARWOOD, } Hon, Secs. G. A. JENKIN,

for the Oxford and Cambridge University Motor Cycling Clubs.

[The attitude of The Motor Cycle towards Sunday competitions—particularly hill-climbs—is well known. In view of the intimation of the Chief Constable of Buckinghamshire to the hon. secs. of the Oxford and Cambridge University Motor Cycling Clubs that a week day would be preferable, we confess that we cannot share the apparent surprise of the organisers at the interference by the police.-ED.]

THERE ARE HILLS IN IRELAND, TOO!

Little is heard of Irish hills as a testing ground for motor cycles, but it is not because they do not exist. The Cork M.C.C., for instance, found a "teaser" for inclusion in their recent do not exist. The Cork M.C.C., for instance, found a "teaser" for inclusion in their recent trial. The photograph gives a good impression of the gradient of the hill, which is in the neighbourhood of Kenmare

CLEANLINESS.

Sir,—Having read "Ixion's" remarks re muddy shoes and leggings, and also J. Graham's letter on the same subject, I thought the method of procedure adopted by my father might he of interest.

He travels from Kingston-on-Thames to Cricklewood and back each day, a total distance of twenty-eight miles. This

back each day, a total distance of twenty-eight miles. Inis he has done every day on a 2½ h.p. New Imperial ever since August last year through every kind of weather. He keeps perfectly clean by wearing, in addition to macintosh and leggings, a pair of goloshes. When removed at the end of the journey these leave the shoes perfectly clean, and the inside of the leggings are not dirtied by drawing the feet through them. R. H. CHAPLIN.

STATION APPROACHES ARE PRIVATE.

Sir,-Last March, when riding a solo machine up George Street, Croydon, Surrey, to business one morning, I found the road outside East Croydon (Main) Station entirely blocked the road outside East Croydon (Main) station entirely flocked by two trams and a 'bus, all stationary and in line. Seeing the station approach clear right through, I switched into this. Unfortunately, a gentleman, late for his train, ran out, and it was impossible to avoid a collision. The usual police procedure took place, and since that time the A.A. and M.U. has met the small claim made by this gentleman in a very satisfactory manner.

The main point of interest lies in the fact that the London Brighton and South Coast Railway Company summoned me last week for trespassing on their private property, and I, of course, pleaded ignorance of any station approach privacy, but was fined 21s., and 21s. costs.

I am taking this opportunity of asking you to publish my experience, in order that other motor cyclists may not suffer in a like manner.

The A.A., of which I have been a member for some years, stated the case was one they were not prepared to handle. A. H. HUNT.

PLUG EFFICIENCY.

Sir,-I give the following experience, which occurred some little time ago: On a fairly new two-stroke engine the plug suddenly went wrong after previously doing quite well. I tried five different plugs of the best known makes, and none lasted more than ten minutes. I then asked the garage people if they could suggest anything, and was advised to try a

Burton, which was unknown to me. never had another moment's trouble, I know nothing else whatever about it, not even the makers' name or address, but wish to give credit where it is due. Leeds.

Sir,-1 too have had a great deal of trouble with British plugs on a 6-7 h.p. twin, and, incidentally, with American and French ones also, and finally over-came the nuisance of having to change plugs after every long-distance run at speed by litting a pair of disreputable-looking igniters, supplied to me with an old American motor boat engine. This year I am using in another

engine the British plugs scrapped last year, which seems to show that engine design is a very important factor in plug efficiency-yet we never think to blame the engine designer. I know cases were plug troubles have been eliminated by fitting a larger magneto. True, there are plugs that will stand up in engines that are notorious plug eaters, and nobody seems to know the reasons why. If I remember rightly, Scott owners had trouble with plugs before the war, and when they finally found one to stand up to the work-it

was not German, but American. Earlsdon. CANADIAN. Earlsdon.

Sir,-I was much interested in "An Old Hand's" letter in May 27th issue

Old Hand's letter in May 27th issue of The Motor Cycle.

During the war I was using naphthalene in a B.S.A. combination, and had so much trouble with broken porcelains that I finally made my own porcelain and fitted it into an old L.M. case, which did me very well till the points gradually burned too short

I am now using an Oleo, which is all I can desire, and would recommend "An Old Hand" to try one. I have no BENZOLE.

Stoke-ou-Trent.

Sir,—I was much interested in a letter headed "Ping Efficiency," in The Motor Cycle of May 27th, having had

a similar experience myself with British plugs.

The plug fitted to my new two-stroke gave out at three miles; another of the same make lasted for five miles. I then fitted an American plug which stood up to the work perfectly. However, to give the British one a fair test, I subsequently fitted another, thinking the very oily condition of the new engine might have been responsible for the speedy collapse of the first two plugs; the result was the same, the plug giving out at seventeen miles.

I have had no trouble!

HENRY F. HARDY.

SUMMARY OF CORRESPONDENCE.

Lenses in Goggles.—A. S. Lyons and Son, 221 Shakes-peare Crescent, Manor Park, E.12, are added to the lists

of opticians who supply lenses for goggles.

COURTEOUS TREATMENT.—Further letters on the subject of satisfactory service and courteous treatment on the part of manufacturers and garages have been received. Edwyn G. Wilson gives an example of the promptitude and good treatment of Maude's Motor Mart.; another correspondent writes an appreciation of the service rendered him by Richardson's Garage, Derby Road, Nottingham; and a satisfied A.J.S. rider quotes the case of a tank which was supplied by the makers free of charge, although the guarantee had long expired. Another A.J.S. owner—in Newcastle-on-Tyne—eulogises Cyril Williams, the Wolverhampton agent, for prompt attention in the matter of replacement parts.

Complaints .- Although the number of complaints regarding the supply of new machines and spare parts are now considerably less than at any time since manufacturers resumed their normal occupations after the war, we have to record that there is still room for improvement. Several complaints from readers are being investigated.

Summary of the Pracising. How a "Record" Lap was Done. Mechanical Details and Features of Competing Machines.

PRACTISING for the Tourist Trophy Races ceased on Monday morning of this week, and competitors for the Junior event handed in their mounts for official inspection, the Senior riders submitting their machines yesterday (Wednesday) for the same purpose.

In watching the practising each morning one could not fail to be impressed by the splendid manner in which the majority of the machines hold the road and the fearlessness of the riders in cornering, which has been responsible for some high speeds being attained.

The lap times of the winning Rudge in the 1914 event were 45m 48s, 44m, 35s., 45m, 46s., 44m, 46s., 45m, 49s., and 46m, 3s. Total time, 4h, 32m, 48s.; the average speed being 49.49 m.p.h. The fastest lap (H. O. Wood (Scott) first lap) was 42m, 16s., equalling 52.23 m.p.h.

Fast Practice Laps.

Early last week Dance (Sunbeam) covered three laps without a stop at speeds of 50.7, 52.3, and 50.9 m.p.h. respectively. His time for the best lap was 43m. 15s., but, as the course is slightly longer than that of 1914, his average speed was better than H. O. Wood's figure given above. It should also be remembered that the alteration in the course has not improved the speed possibilities.

With such speeds as have been put up this year, one might be inclined to think that the chances of H. R. Davies's little A.J.S. would be small in the Senior event, but on the same day as Dance put up the performance just recorded, Davies covered the lap at an average of 50 m.p.h., which

was nearly 3 m.p.h. faster than the fastest lap in the 1914 Junior, his time being 45m.

For consistency and speed it is quite likely that Dance's record will not be broken during to-day's race.

Both the Dunlop company and the makers of the Clincher tyre installed buffets at the starting point during practising. Above are seen Norman Black (Norton) and P. G. Dallison (Ivy) taking an early morning It is interesting that John Marston, Ltd., have only six machines on the road, but they are long past the experimental stage, and nothing has been left to chance.

Several times the Sunbeam riders have visited the Island, and they are taking the event much more seriously than many of the competitors. It must be remembered that they were runners up for the Trophy in 1914, when Davies's time was only 6m. 24s. slower than the winner. If a Sunbeam wins its success will be well earned.

During the practising there was little of the spectacular about any of the Sunbeam men, and it was evident that Mr. J. E. Greenwood, who is in charge of the Sunbeam entry, has drilled his riders well, and that they have appreciated that a T.T. is not won by taking undue risks during practice.

As might have been expected, the practising attracted a good deal of attention from Manxmen and visitors to the Island, and at 4,30 every morning quite a large number of people turned out to witness the start, while Governor's Bridge was the venue of many interested spectators who congregated there to witness the cornering on this difficult part of the course.

The Story of a Hoax.

The T.T. would not be complete without its jokes, and in this connection D. S. Alexander (Indian Scout) very cunningly hoaxed the officials during the practising. Together with other papers no doubt, we received telegrams to the effect that the Indian rider had covered the course in

T.T. Notes and News .--

39½m.—a speed of over 57 m.p.h. We did not publish the figures. The time was too good to be true. The Scottish joker had overdone it.

It appears that the hoax was earefully arranged by Alexander and a few friends and caused something in the nature of a sensation. After completing his first circuit on the particular morning, he started on a second lap at a pre-arranged time and was timed in again 391m, later. The marshals round the course all reported that Alexander had passed them going well. The amazement continued throughout the day, but when it was discovered that the "news" was being wired te newspapers across the Channel it was decided to explain how it was done. Alexander did not go round the course, which he left at Braddan and journeyed to Hillberry by another route, a distance of eight miles.

The Art of Cornering.

As will be appreciated by all who aspire to be speedmen, to-day's good form has not been attained without much practice and a great deal of experimenting. Cornering has been reduced to a fine art, as it must be in the case when fractions of a second may be of importance. A little extra skill on the corners and a little greater accelerative ability on the part of the machine makes all the difference between the fastest lap and a mediecre performance.

Governor's Bridge made a good point from which to observe the various styles of cornering, and many spectators sta-

tioned themselves here.

At first the cornering at this point was "poor to middling," but each day saw a great improvement. The Ramsey hairpin did not give so much trouble, and the speeds of the majority at this point were somewhere in the neighbourhood of 25

The lap time of each competitor was registered on this board as he completed each circuit.

m.p.h. even in the early days of the practising.

The Norton Entry.

Almost all the Nortons ran very consistently during the practising, and consistently auring the practising, and shared with the Sunbeams and Indians a high place in Manx opinion. True, they did not put up remarkable lap times, but they have been fairly uniform, and mostly were well under the 50m., showing that until a few days before the conclusion of practising at all events no undue risks were being taken,

Aspirants for the Team Prize.

Six teams are entered for the muchcoveted team prize, in which connection the Norton has an extremely good chance, for there are no less than four teams on

these well-known singles against one team each on the Indian Scout and Sunbeam machines. The teams nominated are given below:

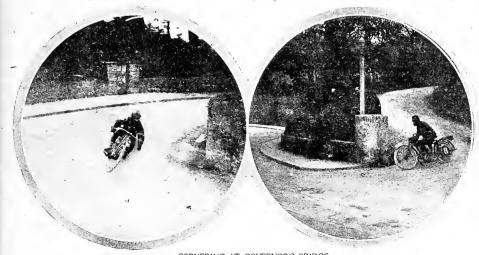

SUNBEAM. F. C. Townshend, G. Dance, and T. C. de la Hay. Indian Scout.

D. S. Alexander, F. W. Dixon, and B. Houlding.

Norton.

Norton Motors, Ltd., Team : D. M. Brown, J. W. Shaw, and Noel Brown. Capt. Lindsay's Team: A. Lindsay, J. Thomas, and N. Black.
T. Simister's Team: V. Olsson, F. C. North, and T. Simister.

Victor Horsman's Team : H. Petty, V. Horsman, and N. C. Sclater, jun.

CORNERING AT GOVERNOR'S BRIDGE. Each competitor had to complete a certain number of laps within a specified time to qualify for the races.

SOME NOTES ON THE MACHINES.

Sunbeam.

Among the many points of interest of the Sunbeam machines is the new detachable cylinder head held to the cylinder by bolts having square heads. This construction is so neat in design that at first one can hardly tell that the heads have a joint and are detachable. The cylinder is spigotted into the combustion chamber, the joint being made with a copper-ashestos washer. Slightly smaller flywheels than standard are used and the big ends have roller bearings.

and the big ends have roller bearings. With regard to lubrication, an oscillating pump driven from the cam gear provides a constant supply of oil to the crank case, and for emergency purposes a foot operated pump is fitted. We hear that the new Sunbeam engines are capable of 5,000 r.p.m. on the bench, a speed attained by virtue of their very light working parts. The cams are standard.

Two gallons of petrol and three quarters of a gallon of oil are carried, a small point of interest being the provision

C. G. Pullin, the 1914 winner of the Senior Trophy, who is not detending his title.

of a filter cock and petrol pipe for supplying the carburetter from both ends of the tank. The rear rim brake is operated by pedals on both sides of the machine, and the front V rim brake is controlled from the handle-bars.

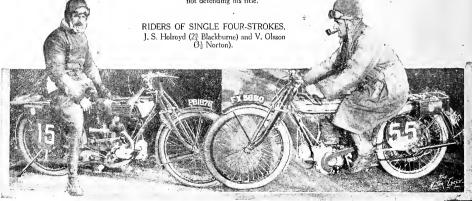

An entirely new type of gear box is used providing ratios of $4\frac{1}{27}$, 6 and 8 to 1. the number of parts being reduced to a minimum, so as to avoid friction.

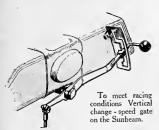

A hand-controlled five plate cork clutch, and the standard cush drive is retained, while the weight, incidentally, is between 180 and 200 lb.

Incidentally, Dance's wonderful Sunbeam, with which he has scored so many victories, will not be used in the race.

The Nortons.

There are fourteen Nortons, in all, competing for the Senior Tourist Trophy, but not all of them are under the supervision of Mr. O'Donovan at the Norton Depôt, several heing privately entered and ridden, and a comparison of the latter's performances will be instructive.

The Norton machines, however, are practically standard, a deviation being in the new Sturmey-Archer gear box which provides ratios of 4, 5, and $7\frac{1}{2}$ to one

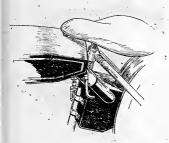

Each machies weighs about 230 lb. with full equipment. There is no change in the design of the engine, which will rev. up to 4,300 r.p.m. A speed of 76 m.p.h. on top gear is anticipated, and 55 m.p.h. is said to be possible on a five to one gear.

V Twin Indians.

Except for the fact that the cylinders have a smaller bore and stroke (i.e., 68.2 × 68.2 mm.), these machines are almost identical with the Standard In-dian Scout model. The cylinders were made specially for the T.T. machines at the Hendee factory in America, and have side-by-side valves and un-enclosed springs. Aluminium pistons with two rings apiece are fitted in place of the cast iron pattern used in the standard Indian Scout, while the tyre rims are of the Jin. type.
Weighing 270 to 300 lb., the Indians are on the heavy side.

The Douglas.

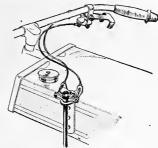

The Douglas to be-ridden in the Senior Race by A. H. Alexander is fitted with special cylinders, having detachable heads, and overhead valves. The cylinders are held to the crank case by four studs, another set of studs being employed for the attachment of the head to the cylinders. The created when the care wild walks are considered to the cylinders. der. The overhead valves are inclined to each other in the cylinder head, and operated by offset rockers and push rods, which extend to the standard Douglas type tappets in the upper part of the crank case.

Extra oil tank between seat-pillar and rear mudguard on the A.J.S. This reservoir is connected by a large pipe to the main tank.

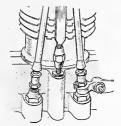

Bearing against a flange on the cylinder head are coil springs, which keep the tappet rod joints tight and free from end play, and the main tappets against the. cams in the crank case. A cradle bracket cast in one with the cylinder head carries the rockers, which are supported on long

Another feature of this engine is the exhaust heater in the centre of the induction pipe extending between the cylinders, and is in the form of a chamber built around the induction pipe, the Seuspray

The top and second gears of the A.J.S. are operated by cables and special handlebar control levers,

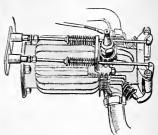

carburetter being monnted immediately below it on a short extension pipe cou-nected to a "T" pipe joint within the heater chamber. Exhaust gases are led through a pipe from the main exhaust pipe leading from the front cylinder, thence through the chamber, afterwards making an exit through a short tail pipe at the rear.

Details of attachment of cylinder holding down strap and adjustment on the A.J.S. Note the inclined tappet rods for the overhead valves.

A Six-speed Gear.

Alexander's Junior T.T. Douglas is the original 1912 machine on which he won the Spanish T.T., but is now equipped with a six-speed gear of a novel kind. A Douglas pattern three-speed gear box is fitted, but in place of the single chain between the engine and gear box there are two chains, one running on a sprocket on the inside of the flywheel, while the other is on the outside. The engine sprockets are of different sizes, and by means of a foot control arm operating a dog clutch between the two sprockets on the gear box shaft extension either of the chains

Overhead valves and gears on the only 31 Douglas in the race.

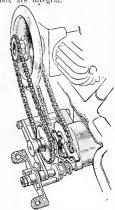

is brought into action and takes the drive. The gears in the gear box are, of course, operated by the horizontal lever above the tank, and by the use of both foot and hand controls any of the six speeds can be brought into action. The gear ratios thus obtained are $4\frac{3}{4}$, $5\frac{1}{2}$, 7, 8, 10, and 12

A.B.C.

The two A.B.C. machines entered by R. Lucas and E. S. Abram are practically standard machines, but the A.B.C. to be ridden by the former entrant has one or two points of special interest. To facilitate gear changing, a semi-circular hacket is bolted to the gear lever about an inch above the gate. This bracket is fits the right leg of the rider, and by a certain movement of the leg the gears can be rapidly changed from first to second, or third to fourth. A touch with the hand is necessary for moving from second to third; but this is relatively unimportant, since most of the gear changing at speed is from top to second gear, under conditions when control of steering with both hands is a necessity, and a foot or similarly operated control becomes a great comfort.

It will be remembered the A.B.C. has

four speeds and that the engine and gear box are integral.

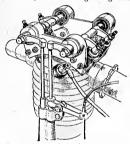

Double chain drive to three-speed gear box on A. H. Alexander's Douglas, giving six speeds in all.

Leg-controlled gear lever on the A.B.C. ridden by Reg. Lucas. The semi-circular bracket fits against the rider's leg.

Lucas has also fitted a combined foot and hand control to the A.B.C. clutch. Two Bowden cables from the handlebar lever and pedal on the left side of the machine, respectively, are connected to the outer end of the external clutch arm in a neat and simple manner. The lower end of the hand-controlled cable is fixed to the machine, the cable sheath depressing the clutch lever, when in action. If the pedal is used, the cable connected to it pulls the clutch arm down direct, its sheathing being station-

Overhead gear of the four-valve, single cylinder 24 h.p. Diamond. Two plugs and magnetos are used

ary, and either cable can operate independent of each other. Should the clutch be stiff to operate by hand, the pedal may be used for assistance and rice ersa should the pedal action be stiff. This competitor has also fitted an emergency cable alongside the brake rod

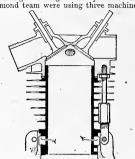

One of the Diamond riders in the Junior T.T.-P. Pike.

controlling the rear brake should the break from excessive road latter. vibration.

The New 21 h.p. Diamond.

Although during their practice the Diamond team were using three machines

with different type engines, namely; an overhead valve twin, overhead valve single-cylinder, and a side-by-side valve

Contour of the Ramsey-Douglas section, showing the climb up to nearly 1,400 feet at the Bungalow.

single-cylinder, a new Diamond appeared in the practice mornings of the second week, and which was of a design totally different from the others. This engine is

R. O. Clark, a Levis entrant.

noteworthy on account of four valves situated in the head and the dual plugs fired by two magnetos. The cubical capacity of this new engine is 248 c.c., and the valve area is very large in com-parison with the bore, there being two inlet and exhaust valves arranged in the detachable cylinder head, each pair at an incline to the other.

Both cylinder and head are held to the crank case by four bolts hinged to pins in the latter, and provided with threaded hexagon sleeves for tightening purposes. The valves are operated in pairs by rockers, which resemble piccolo fingers, and two tappet rods jointed to tappets in a detachable camshaft housing at the side of the crank case. The camshaft is driven by bevel gear from the end of the crankshaft and runs on ball bearings.

Cylinder head of the Diamond, showing four valves and twin sparking plug holes. One of the valves is removed.

as do also the rockers above the cylinder head. The whole of the valve gear is most substantially designed and made. An aluminium piston with two rings in a single slot is used, and slipper type skirts are embodied in the design of the piston.

The magnetos are mounted side by side, one heing direct driven from the cam-shaft, while the other is driven by chain

from the spindle of the first.

The crankshaft is solid with light steel flywheels attached, which receive no stress from power impulses. A Sturmey-Archer gear box and chain-cum-belt transmission is used, the total weight being in the neighbourhood of 180 lb.

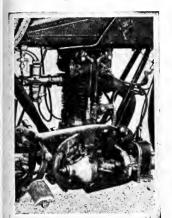

The New Twin Jap.

An entirely new engine which makes its début in the T.T. practising is the small V twin J.A.P. This engine has overhead valves, and the rocker pivots are fitted with ball bearings. The design of this valve convention graph is this valve operating gear is neat and workmanlike.

J. S. Holroyd, one of the Blackburne team in the Junior race.

MOTOR CILE

The new Diamond overhead valve engine, showing the ball bearing rocker shafts and twim magnetos. A four-speed gear is embedied

The Levis.

The Levis Junior T.T. machines used this week are not standard, but have been altered specially for the Isle of Man. With a bore and stroke of 67×70 mm., the cubical capacity is 247 c.c. The cylinder is east in aluminium with a cast iron liner, and two rings are fitted to the cast iron piston. The arrangement of transfer and exhaust ports is of standard Levis design, which also applies to the system of Inbrication employed. This little engine has behaved extremely well in the Isle of Man, while we are informed that on the bench its maximum speed is about 5,000 r.p.m.

The three-speed gear boxes provide ratios of 3\frac{3}{2}, 4\frac{5}{2}, and 7\frac{7}{2} \tau-1, all of which are comparatively high compared with an ordinary tonrist's two-stroke machine. No clutch is embodied.

The main tank is supported by a pair of horizontal tubes, and is wholly used for petrol, lubricating oil being carried in a small and separate tank above the top tube of the frame. The weight of this speedy little machine is approximately 140 lb.

The Duzmo.

This machine is the same which competed in the Liverpool Speed Trials and the London-Edinburgh, and has been altered very little. The Duzmo has already been described in The Motor Cycle, and is interesting as being the only single in the Senior T.T. with an outside flywheel. Amongst other noteworthy features of the engine are overhead valves in a detachable cylinder head, and mechanically-operated pump lubrication: points which all make for increased efficiency.

It may be mentioned that the gear ratios used are $4\frac{1}{2}$, $5\frac{1}{2}$, and 7 to 1, and that the machine weighs 270 lb. Le Vack stated that his engine can rev. up to 3,500 r.p.m. in a test, bench,

The Ivy Two-stroke. -

The Lvy machine used in the Junior T.T. is actually a 1921 model, which will make its appearance on the market in a few months time. The engine is of 349 c.c., and the bore and stroke are 75×79 nm. Maximum revs. are stated to be 5,900 under a brake test.

The Sturmey-Archer countershaft gear box provides three speeds, with 4_4^3 , 6, and 7_2^4 to 1 gear ratios. The transmission

is by chain throughout, and the Sturmey-Archer clutch is hand controlled, while the complete machine weighs 212 lb.

T. C. de la Hay (Sunbeam).

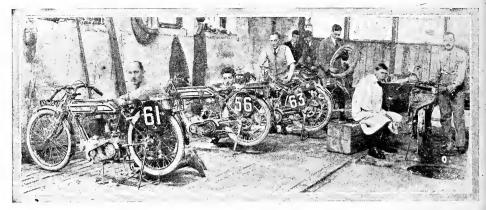

THE DAWN OF DAY. -

4.30 in the morning is not a time when one expects enthusiasm on the part of spectators, yet, as the pictures show, these morning scenes were quite animated. (Left) Eric Longdon effecting an adjustment before starting. (Right) V. E. Horsman (Norton) being timed away.

The Wooler.

In view of the recent long-distance records secured by McNab on the Wooler flat twin, the entry of a team of these new machines was of more than ordinary interest. It will be remembered that on Brooklands McNab averaged 42.84 m.ph. for eight hours, and 40.60 m.p.h. for twelve hours. These machines are all standard models.

An animated scene at the Norton depot.

The Blackburne.

The Blackburnes used in the Isle of Man are the first complete 23 h.p. machines to be turned out at the Blackburne works. The engine is a standard 23 h.p. model, with detachable cylinderhead and outside flywheel. Gear ratios of 5, 64, and 94 to 1 are provided by a Sturmey-Archer gear box, and the usual hand control is used with the clutch. The petrol and oil tank is very wide at the front, and tapers to the rear. Two gallons of petrol and half a gallon of oil are carried. The weight of the machine is 250 lb.

Three of these machines were entered, and they are standard in design in all particulars, and were drawn from stock.

The Aurora.

Fitted with a two-stroke Dalm engine of 73×76 mm. bore and stroke and 318 c.c., the Anrora is the production of Messrs. Aurora Motors; Rainsey, I.O.M. The cylinder is of the three-port type

with twin exhanst pipes. An enginedriven pump supplies the engine with oil, and the feed is controlled conjointly with the throttle movement. A two-speed Burman gear box with clutch is fitted, and chain-cum-belt transmission is used. An external contracting brake and a belt rim brake are fitted at the rear. There were two of these machines entered in the Junior T.T.

New Comet.

This machine, of which only one model was entered in the Junior Race, being an almost standard production, was worthy of close attention. The Climax engine fitted, although of two-stroke three-port type, is unusual in having inside flywheels. An Amac carburetter faces forward, a large air-scoop being arranged with the object of getting forced induction. All the other details of the machine are standard, including C.A.V. magneto and Albion two-speed gear box with chain and belt transmission. The gear

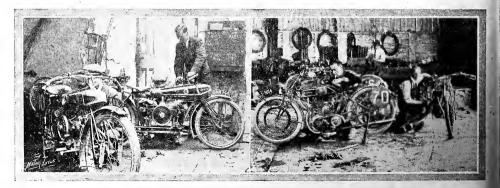

ratios employed are normal, and the equipment is similar to that of the ordinary stock models with the exception that special mudguards and flatter handle-bars are used. The rider, Leonard Clements, is a newcomer to motor cycle racing circles.

The Dot-Jap.

The engine of this motor cycle is a new J.A.P. production, referred to elsewhere, and has overhead valves located in a detachable housing. The valve seatings are cast in one with the cylinder, and the tappet rods have ball and socket joints instead of the earlier type of fork joints used on the rockers. The bore and stroke are 60×61½ mm. and the cubical capacity 348 c.c. This was the only V twin entered in the Junior race, and, indeed, it would appear that in the battle of the types this form of engine is gradually losing its popularity.

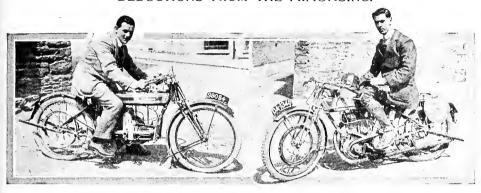

The machine is equipped with a two-speed Albion gear box and chain and

belt transmission.

FINISHING TOUCHES. Right up to the last minute the work of preparing went on at all depots. Competitors and mechanics busy on the Woolers and Sunbeams.

DEDUCTIONS FROM THE PRACTISING.

"Flat twin" and "single" in the Senior Race. A. H. Alexander (Douglas) and G. Dance (Sunbeam).

U NLESS practice times and general performance during the preceding fortnight are wholly misgurding, one can reasonably assume that the main struggle will be between the Sunbeam and Norton machines in the Senior T.T.

and Aorton machines in the School 1.7.

The Sunbeams have performed consistently well: moreover, they are specially designed throughout for the stremous Isle of Man course, but numerically the Nortons have the advantage, and they are ridden to-day by good men, as practice

All the Nortons, with one exception, are purely standard machines, and have not been altered for the purpose of the race. Even the one which is the exception is a machine with belt drive and variable pulley.

We have J. E. Greenwood in charge of his Sunbeam team. He has seen that each of his men is up to the mark, and that machines are always in "condition."

The Norton machines are almost all of them under the Norton expert, D. R. O'Donovan, who is not likely to forego chances in the race, and the Norton engine has always possessed a reputation for speed records in competitions both for duration and hill-climbs.

A Battle of Singles.

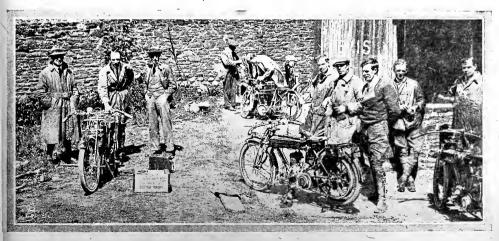

Comparing the two makes of machines and their practice performances, the odds are slightly in favour of the Sunbeams as regards speed and other factors; but should the Sunbeams meet with bad luck during the six laps in the race, then the

numerical strength of the Nortons may bring in a winner. It is not unsafe, then, to presume a tough struggle between the two teams and a very exciting win for the first man.

the first man.

The Indians, A.B.C., Duzmo, and Douglas, are all comparatively "dark horses," but their relatively slow performances during practice cannot be taken as an absolute guide to their ultimate chances. The Indian machines are handicapped by extra weight, but even so, they may not yet have shown all their cards for a win, and possibly their team work may produce unexpected results.

These entrants have not had the advantage of organisation and assistance in their preparation and practice, but

STABLE COMPANIONS.
Blackburnes share the same depot as the Levises

Arrangement of Bowden cables on the clutch control of Lucas's A.B.C. The

none of them have been slow on the conrse

Of the particular riders to be favoured Of the particular riders to be favoured in the Senior race, one has only to compare the practice times of one or other of the men, such as Dance, De la Hay, Eric Williams (winner of 1914 Junior T.T.), D. Brown, Shaw, etc., to know that some fast riding will be achieved.

The Degory "no-jet" carburetter fitted to A. E. Wills's overhead valve Douglas. The central portion of the induction pipe is an aluminium casting, and fits flat against the timing case cover.

Reading from left to right the riders are: H. R. Harveyson, F. W. Dixon, and A. H. Alexander.

Douglas Promenade makes an ideal speedway for teamorrow's flying kilometre. Early morning practising for the event.

This compares favourably with some of the best practice performances of the Senior machines, and provided the engine

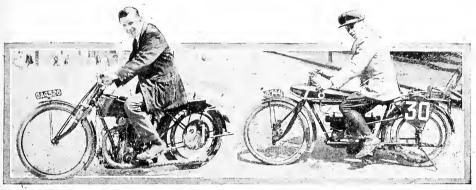

To obtain alternative riding esitions, three rubber grips were used by Dallison (Ivy) on each side of the handle-bar.

can stand six laps "all out" in the race. can stand six haps an out in the later this machine will prove a very serious competitor, and, given good luck, should finish quite well up even though it may not win.

emergencies by fitting an extra cable alongside his brake rod.

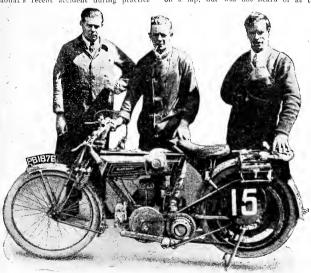

Two four-stroke types in the Junior Race-Milner's 23 h.p. Diamond and Clayton's flat twin Wooler,

THE LAST DAY'S PRACTISING.

Monday morning was wet and gloomy, and, with the exception of one or two competitors who pottered round the course, there was actually very little practising. Of Senior competitors three had not qualified by the previous Saturday—A. J. Moffat (Norton), J. Thomas (Norton), and S. J. Redmond (Indian)—and only Thomas turned up on Monday morning. Despite the wet weather, Thomas covered two laps, one of which he made in less than one hour, and he thus qualified for the Senior race. Moffat's recent accident during practice

was evidently responsible for inability to complete the necessary number of laps, while Redmond, we understand, decided not to compete in the Senior. Harveyson, Dixon, and D. S. Alexander (on their Indians), and Lucas (A.B.C.), each put in a lap of the course; and T. Simister (Norton) covered two circuits without stopping, also Milner and Marks went round on their four-valve Diamonds. The former, however, decided to ride his 250 c.c. J.A.P.-engined o.h.v. model in the race. Oates, on the Aurora, started on a lap, but was not heard of at the

The new $2\frac{\pi}{4}$ h.p. Blackburne machine made its debut to the public in the Senior T.T., for although a large number of makers have been using this engine for the past year, it has not been included in the Blackburne range. The central figure is P. J. Enticknapp, and to the right is seen J. S. Holroyd, both well-known competition riders.

After morning practice competitors were fully employed tuning up and adjusting their machines.

official cessation of practice. Excluding those competitors who suffered accidents and are out of the Junior race, there remain four riders who have presumably not qualified. These are J. S. Clayton (Wooler), E. Greenwood (Douglas), J. W. Oates (Autora), and J. H. McDowell (Wooler). F. A. Applebee, the one-time trophy holder, went over the course on his touring Indian in 57m., which is an excellent performance, considering he has not seen the course for some years. Despite the weather, a large number of spectators assembled at the start on the last morning of practice, and, incidentally, the carpenters were busy putting the last touches to the grandstand.

IMPRESSIONS OF THE COURSE.

Condition of the Roads immediately before the Commencement of the Races.

Sunday in the Isle of Man was not exactly a day of rest, for the competitors, particularly those in the Junior race, were busy putting finishing touches to their machines. Though motoring was restricted to those possessed of a permit, there seemed no real obstacle in obtaining these, and many took the opportunity of following the course. Trade people particularly were in evidence, and here it may be stated that interest in the event was never more pronounced.

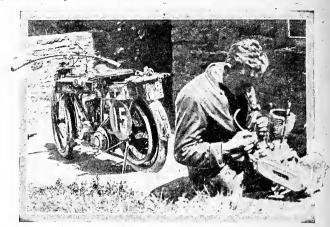

Crowds of Visitors.

Despite the somewhat scanty entry, the many boats have never been so crowded with visitors. On Saturday, for instance, one thousand people were left behind when the first boat left, so that two relief boats were necessary; the afternoon boat, too, was thronged.

On Monday morning, machines in the Junior race were weighed, examined, and numbered, these operations taking place at the starting point. Prior to the race, we took a final trip over the course.

Notes on the Course.

Generally, its condition is good, the state of the surface at the end of the practising proving the negligible amount of damage motor cycles do to roads. After Quarter Bridge there is a perfect surface, often tarred. In Glen Helen occasional wavy stretches are encountered, and under the trees there were patches of wet; after Creg Willey the very fast stretch to Sulby Bridge is in excellent order. From there on to Ramsey the going is not so good, due to abnormal rains. (A slight change of route in Ramsey itself involves a further right-angle turn.) The stiff climb over Snaefell is in wonderfully good condition, though very loose in parts, and stiff head winds are usually encountered at one point or other of the simous climb, which factor has troubled comitted.

AT THE BLACKBURNE DEPOT.

P. J. Enticknapp busy on a dismantled engine during the practice period.

petitors not a little in selection of gear ratios. So carefully are these calculated that in similar makes of machines the ratios vary according to the weight of rider. From the signost onwards are two right-angle bends, and a narrow road approaches the Z bend at Governor's Bridge. Every rider must literally crawl round the bends, for they are far more acute than the Snaefell bend at Ramsey.

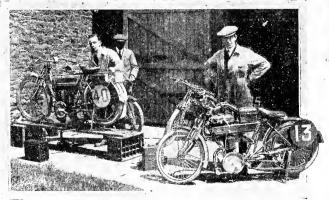

A Downhill Swoop.

Then follows a straight wide stretch to the starting and finishing points in the terrific swoop now made possible down Bray Hill. Considering the additional bends and slightly longer course, it is doubted by successful exponents whether the speed records for the course will be broken. Last week-end we saw on the Island, Tim Wood, Hugh Mason, F. A.

Reg. Brown (Sunbeam).

Applebee, P. J. Evans, and Eric Williams—all previous heroes, and still as keen as ever on the most sporting motor cycle event of the year. At the smoking concert organised at the A.J.S. headquarters at Crosby, £100 was realised on the spot in aid of the local hospitals.

AT THE LEVIS DEPOT.

One of the machines bears the number least desired by the superstitious rider.

INCIDENTALLY.

The Dunlop and Clincher Co.'s motor vans located at the start provided competitors and others with hot drinks during the whole fortnight of practising.

Magneto cut-outs were made optional by the A.C.U. in the second week.

Weird mascots have been worn by a number of competitors, and one rider has green and yellow spots painted on his racing helmet.

F. W. Applebee was, with few exceptions, the first man off on each practice morning. He used upturned handle-bars. Governor's Bridge has been proclaimed the worst course on the course by the riders, although not the most dangerous.

G. Dance has easily upheld his reputation as a speed man in the practising.

Despite the early hour of the commencement of practice, the utmost joviality existed amongst all and sundry at the start on Bray Hill.

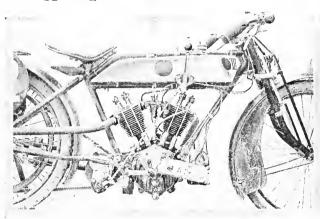

The Sunbeam men use a leather peak on their racing helmets.

"Half Europe on a Norton"—a competitor's opinion of the fourteen Norton entries.

Norman Black's belt-driven Norton with Philipson pulley made some excellent lap times in competition with three-speed machines.

The Sunbeams have coil springs instead of leaf springs as in the standard model.

MOTOR (YCLE

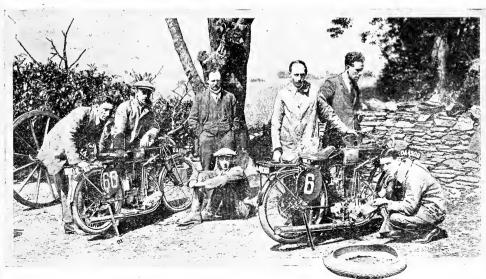

The only British V twin engine in the races—the new overhead valve 350 c.c. J.A.P., of which little was known before it made its appearance in the Isle of Man.

Sidney Haden, age eighteen, reserve rider for the New Comet, was the youngest rider on the course.

A brand new Bosch racing plug was found in a competitor's garage. It had been lying there since 1914.

There has been a rather musual number of accidents during practising this year, and, strange to say, most of these have occurred to entrants in the Junior Race.

These include Heath; Haddock, and Cowell of the A.J.S. entry, and Clement, who was entered to ride the New Comet. In addition, Rice, one of the Sumbean reserve riders and a Manx marshal, made up the rest of the hospital party. True, none of the "casualties" were really serious cases, and all of them are making very satisfactory progress towards complete recovery. It is remarkable that falls from motor cycles, even at speed, result in comparatively little injury.

The A.J.S. depot is situated midst rural surroundings. Mr. Harry Stevens is seen standing in the centre of the picture, with Eric Williams and H. R. Davies on the left.

X00000000000

CLUB NEWS. (Continued from page 676.)

Newcastle and District M.C.C.

Thousands of spectators assembled at . the start of the all-night run to Edinburgh and back on the 5th inst. Fifty vehicles started, and thirty-seven completed the course. The outward journey was via Alnwick and Berwick, returning via Jedburgh and Otterburn.

The night was cold and dark, but fine, and the run proved most successful. The winner of the Baker challenge cup and special prize was R. H. Johnson (4 Triumph).

Gold medals were awarded to the following competitors checking at each control within one minute of schedule time: A.

(3½ P. and M.), and J. G. Edminson (25 Hudson Six car).

Twenty-two competitors were awarded

bronze medals.

Coventry and Warwickshire M.C. The following are the official results of the Manville Trophy competition held on the 5th inst. Owing to the number of competitors qualifying for this award, the winner has to be chosen from reports on a secret check. This was C. Mansfield (3 a secret check. Inis was U. Mansheld (of A.B.C.). Special class prizes were awarded: Solo, W. W. Brandish (4½ Humber). Sidecar, D. S. Heather (4½ B.S.A.). Car, Miss Vera Hathaway (11.9 Hillman). The following competitors Hillman). The following competitors gained special awards, having lost no marks: T. H. Meakin (4 Triumph), N. Rycroft (4 Triumph sc.), F. L. Allen (5-6 Rover sc.), H. A. Smith (4 Triumph sc.), T. R. Gibbins (8 Acme sc.), H. Finch (4 Triumph sc.), D. A. Atkin (8 Acme sc.), J. W. Ravenhall (5-6 Rover sc.), C. R. Little (4 Triumph sc.), W. J. Montgomery (5-6 Rover sc.), A. R. Grindlay (7-9 Harley sc.), and F. H. Brown (8 Ressc.). The following also got awards, having lost not more than five marks: W. F. Smith (22 Hobart) and A. P. McCowran Smith (23 Hobart) and A. P. McCowran (4 Triumph sc.).

Bradford M.C.C.

This club has now been reorganised, This club has now been reorganised, and at a recent meeting seventy-five new members were enrolled, bringing the total over 100. A flowicee' reliability trial was recently held for the Triumph cup, resulting in a win for S. Jowett (Norton sc.). Prizes were awarded to C. Haigh (P. and M.), G. R. Grundy (Triumph), and S. Haigh (Ariel sc.).

North London M.C.C.

The outstanding performance in the The outstanding performance in the recent Staley cup trial was the consistent driving of Miss D. Busby (23 Douglas), who tied with R. H. Baxter (24 Radco) for the trophy with full marks. Silver medials were awarded to F. J. Watts (5 Brough) and H. F. Hammond (6 Zenith), while the following gained bronze medals: F. F. Jones, F. A. Jelks, J. F. Hull, F. W. Turner, R. L. Richardson, and M. J. Wilkes.

PRINTING TRADES' DISPUTE AND THE MOTOR CYCLE.

The printing industry as represented by its various Unions has, for some time past, been negotiating for an increase in wages.

Some twenty or more Unions are involved, and a basis of settlement has been reached which the Executives of every affiliated Union, with one exception, are recommending their members to accept.

The exception is the Typographical Association, who have issued strike notices which become operative at a future specified date, but in the meantime their members are not permitted to work overt-me.

This step is universal wherever members of the Typographical Association are employed. London and Scotland; however, are not affected, as they are not in the area in which the Typographical Association operates.

Owing to the large circulation of our papers and the difficulty of securing adequate labour, it has been impossible for some time past to produce them without very considerable overtime, and the reduction of output entailed by the lessened number of working hours may, we are afraid, cause delays in production. In order to meet the difficulty to some extent we have been obliged to hold over a large number of pages of advertisements from the present issue, and to delete a number of pages of editorial matter. and we must in consequence ask our readers' indulgence during these difficult times.

ILIFFE & SONS LTD.

The Scottish Six Days Trials.

Up to the time of going to press over eighty entries have been received, and the following makes of machines will be represented by teams: New Imperial, P. and M., Rover, Ariel, Indian, and two B.S.A. teams.

Leeds and District M.C.

A minor speed trial was held on the 6th inst. This event was run in classes and the class winners competed in the final under a handicap framed from their class times. A separate class, with perclass times. A separate class, who personal handicapping, was also run for novices. Results: First, silver cup, Gregory (23 Douglas); second, gold medal, Stanhope (Stanhope runabout); third, silver medal, Almond (4 Trimph); a novices' prize was awarded to Ridgeon (23 Douglas).

THE LONDON-EDINBURGH RUN RESULTS.

WHEN the London-Edinburgh results were published in this journal it was announced that certain cases were held over for further consideration. Since this announcement was made the M.C.C. committee has met and the following awards have been made: -

A. E. Walker (23 Hobart) has been awarded a gold medal, and not a silver as previously announced.

D. Bradbury (4 Norton) is awarded a silver and not a gold medal.

H. B. Browning (3\frac{3}{4} Scott) and J. A. Watson-Bourne (4 Blackburne) have been awarded silver medals.

awarded silver medals.

Competitors who have earned gold medals either in the London-Edinburgh or London-Land's End runs are entitled to receive gold medals, gold sleeve links, or silver ash trays, with the club's silver medal in the centre. Medal winners should communicate with the secretary, Mr. Southcomb May, 34, Gower Place, Loudon, W.C.1, regarding their choice in this direction, by July 1st.

TAXATION.

R EPLYING to a question put to him in the House of Commons last month, Sir Eric Geddes admitted that in an interim report, the Departmental Committee of the Ministry of Transport which dealt with the Taxation proposals, "indicated their preference for a petrol tax.'

It now transpires that the Committee the foundation of their preference for maintaining the principle of the petrol duties. Sir W. Joynson-Hicks, M.P., in the last issue of *The Sunday Times*, points out that the Committee's actual

recommendations were as follow: (1) Taxation of motor spirit should be

continued.

(2) A flat rate per gallon should be levied on all imported motor spirit used by mechanical road vehicles of every description.

The principle to which the Committee endeavoured to make their original pro-posals enforced was that "as far as posaise sniorced was that as far as possible taxation should be proportionate to user in the case of all mechanical road transport," and they stated at the very beginning of their interim report that "We consider that the taxation of

of charging proportionate to user."

Sir W. Joynson-Hicks states that it can be shown conclusively that the revenue which the Government desires to obtain can be secured by a flat rate of 4½d. per gallon upon all imported petrol, coupled with a small increase on licence duties for private cars and a low schedule for commercial vehicles. "Indeed," Sir W. Joynson-Hicks continues, "I doubt whether any tax on the vehicle itself will be needed next year to produce the re-quired revenue, if the Ministry's own estimates as to the number of vehicles escinates as to the number of vehicles that will then be on the roads are realised. Why, under these circumstances, does the Government insist upon forcing its alternative scheme upon the country against the wishes of the enor-

mous majority of the users of mechanical road vehicles?"

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d, stamped addressed envelope for resily. Correspondents are utged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Lost in Transit.

A motor cycle having a Bosch magneto was advertised recently, and I wired cash to owner of machine, which was then put on rail per passenger train. On arrival here it was minus magneto. Who is responsible for the loss?—

C.P.J.

Either the sender or the railway company is responsible for the loss of the magneto. If the machine was sent at sender's risk, it is his responsibility, but if it was forwarded at the company's risk, the company are responsible, provided the machine was complete when handed over to them.

Timing a Single.

I should be grateful if you would settle a point relating to the valve setting of a motor cycle engine. The engine in question is a single-cylinder 3½ h.p. Rex (85×90), which I took down at the end of last year, and finding that the rockers and cam wheel were rather worn, sent for a new set from the makers. I\set these so that the exhaust valve closes, if anything, just a shade past the top of the down stroke, and the inlet valve opens in. further down. As both valves are operated by one cam, I concluded that this was correct, and boxed it up. Afterwards, however, measuring with a wire, I am surprised to find that the exhaust opens 3in. from the bottom of the firing stroke, and the inlet closes stroke. These measurements I am absolutely certain of, but the closing of the inlet and opening of the exhaust seem to be late and early respectively .-W.J.M.

Time the engine by the following method: Rotate the flywheel until the piston is at the top dead centre, then in-sert the cam wheel and rockers in such a way that the exhaust valve is just closing and the inlet valve just commencing to open. If you adopt this setting you nced not consider the opening position of the exhaust or the closing position of the inlet valve. For timing the ignition, rotate the engine forward one full revolution from this point, when the piston will again come to the top dead centre. Retard the ignition control lever twothirds of its movement, rotate the magneto armature until the contact breaker points are just separating, and then con-nect up the magneto drive. This setting will give you the best results for general running.

Starting an Old Machine.

I have a 6 h.p. Bat-Jap motor cycle with which I have some trouble in starting off. It has an epicyclic gear which is fitted on the engine shaft. When ntted on, the engine snatt. When pushing off, with low goar in, I cannot get back wheel over compression, causing it to skid on the ground. When high gear is in, compression is easier, and the machine will start off with a good sprint. Can you

inform me what is the cause of this? -R.W. The difficulty you experience when en-deavouring to start off in low gear is,

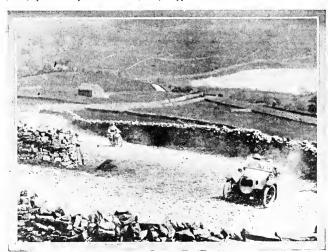

of course, due to the fact that, in a given distance; not only is there a considerable increase of friction due to the higher engine speed, but in the same distance you have to overcome the resistance of a greater number of com-

pression strokes. Probably the bad starting is due almost entirely to the engine being out of adjustment, and we would recommend that you obtain "Motor Cycles and How to Manage Them," published by Iliffe and Sons, Ltd., 20, Tudor Street, E.C.4, by post 2s. 10d., wherein you will find many hints on the management and tuning of old pattern machines.

The Sidecar Taxi.

Is it permissible to obtain a hackney carriage licence for a sidecar outfit, used sole'y for hiring out and business purposes? If four wheels are necessary, would the addition of another wheel to the sidecar bring the outfit to the legal status ?-H436.

We very much doubt whether you would be able to obtain a hackney carriage licence for a sidecar outfit used solely for hiring out purposes. It is a matter, however, which is covered by the local byelaws of the particular locality, and you should see the Chief Constable or the Town Clerk where you reside. Even if a hackney carriage licence was obtained, full licence duty would have to be paid. Up to the present we have not heard of a motor cycle and sidecar being licensed as a hackney carriage, although several applications have been made.

IN THE YORKSHIRE WILDS.

A stiff climb with a I in 4 hairpin near Semmer Water, included in the recent Ilkley open trial. J. R. Sylvester (8 Morgan-M.A.G.) made a good climb,

Replacing Fork Spindles.

How do you relieve the strain on the Druid spring forks when installing a new set of spindles and shackles? The local repairer here has stripped the thread of one of four new spindles, and I cannot get the nut to hold. All these nuts, to my mind, should be castellated and the spindles drilled and split pins inserted.—W.D.P.

In order to facilitate the fitting of new

spindles to the Druid forks, it is necessary to take the weight off them by raising the to take the weight off them by raising the front of the machine and supporting the engine on a box. You will then find that it is quite easy to remove the side links and spindles of the fork, especially if you loosen the springs. The nuts on the spindles do not usually give trouble by coming loose, although some makers do secure them by means of split pins.

Testing Bearings.

I find that, although there is not the slightest up and down play in either the big or little end bearings of my engine, I can tilt the piston a little, not in the direction of travel, but across, the top of connecting rod, so to speak. Also the connecting rod can be tilted across the crank case (which indicates a free bearing, in my opinion), yet I cannot lift either the piston or the cannot lift either the piston or the connecting rod. I can push the engine sprocket in and out for perhaps even less than a 1-th inch, yet I cannot move this in the direction of travel, to show wear in general. Are the bearings in good order ?—P.E.T.

A small amount of side-play or rocking play in the piston and connecting rod may be disregarded, provided you are unable to lift these parts. The small amount of end-play in the main shaft

may be ignored.

70 m.p.h. Wanted.

The number of teeth on the sprocket of my gear is thirty-two, and on the engine sprocket there are sixteen teeth. The belt pulley on the gear box is 6in. across. My present belt rim on the rear wheel is 20in. across. What size belt rim shall I require on the rear wheel to obtain 70 m.p.h. with the engine running at 3,600 r.p.m.?—L.R. engine running at 3,000 r.p.m.?—LR. The present top gear of your machine is roughly 63 to 1. To get 70 m.p.h. with the engine running at 3,000 r.p.m. you would need a 4 to 1 gear, and to get this you would require with the existing sprockets and countershaft pulley a 12in, belt drum on the rear wheel. It is most unlikely, of course, that you will obtain 70 m.p.h. with your machine, as the speed calculated does not take into consideration the effect of the greatly increased wind resistance at high speeds. Moreover, it is not likely that a small engine would run efficiently on such a high gear.

READERS' REPLIES

A Recurring Engine Trouble.

It may assist "F.F." and others if it is pointed out that the loosening of the rivets in their flywheels is owing to the crank pins not being a tight fit. Riveting is absolutely useless if the crank pin

is not a really tight fit in the flywheel. I have had three cases lately of this kind. One customer had had his crank pin riveted four times. I have fitted new crank pins in each case, and no further trouble has been experienced .- C. NEW.

Roc Gear Adjustments.

I have had the same trouble as "H.S." with slipping high gear of my 1910 Roc hub. This I cured by fixing a piece of steel on the low gear pedal, thus extending by threequarters of an inch the point which engages with the high gear pedal. The effect of this is to give a longer thrust to expand the to give a longer thrust to expand the high gear band, and therefore a greater release when in free. Another improvement I found was to remove the quick thread thrust nut and engage it on another lead of the screw forward, and I also fitted a longer adjusting screw (made from a bicycle spindle) to this part .- Roc (Southampton).

EXPERIENCES WANTED.

"G.W.S. (Balham).—Binks carburetter on 4 h.p. Norton (solo). Best jet settings and comparison in results with standard carbetter.

Lubrication of Record Breaker.

McNab used Castrol on his record-breaking Wooler when he established so many new long-distance records. Ripault plugs were also used.

Extensions.

EARCHISIONS.

In order to cope with the steady increase in its business, the Beldam Tyre Co., Ltd., has formed an enlarged company entitled the Beldam Tyre Company (1920), Limited, with a capital of £500,000.

Four-cylinders in the "Edinburgh."

H. G. Bell, who has ten consecutive successes in the "London-Edinburgh" to his credit, seven of them on F.N. four-cylinder machines, has rejoined the makers of this machine as sales manager of the motor cycle department in London.

Sidecar Covers and Aprons.

The Waterproof Co., Rutland Street, Nottingham, are prepared to send samples and quotations for sidecar covers on receipt of pattern or measurements, and state that new covers will be despatched the same day as order received.

Free Chain Lubricant.

The County Chemical Co., Ltd., Chemico Works, Birmingham, are offering 1,000 free tubes of their new chain lubricant to anyone who cares to apply for them enclosing 2d. for postage and mentioning the name of dealer through whom the lubricant is to be supplied.

Peto and Radford, Ltd.

Notices have appeared lately of the liquidation of the late firms of Peto and Radford, Ltd., and the New Peto and Radford Accumulator Co., Ltd. We understand that these are only formal, and in consequence of the amalgamation of the business with those of Pritchett and Gold and Electrical Power Storage, Ltd.

A Record Breaking Sidecar.

Sidecarists who desire an extremely light and at the same time amply strong chassis might well consider the sporting model (K4) Canoelet, manufactured by Messrs. Mead and Deakin, Tyseley, Bir-mingham. One of these, a standard model rom stock, was fitted to D. R. O'Donevan's 3½ h.p. Norton when he broke four-teen sidecar records at Brooklands.

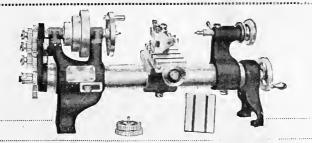

London-Edinburgh Echoes.

R. G. Mundy (G.N.) made a clean scent of Kirkstone. There was a misascent of Kirkstone. placement of an asterisk in the official results. He was, however, credited with

results. He was, nowever, credited with a gold medal.
W. Patison (10 G.P. Morgan) and B. Gold (23 Wolf) were awarded silver medals.

The rider of the Norton with Philipson pulley, who made such a meritorious ascent of Kirkstone, was Stanley Lawrence, and not J. Boult as stated.

Lessons of the T.T. Races.

MAGNIFICENT success! Such was the general opinion of those who witnessed this year's T.T. races. Reflecting upon last week's memorable event, which saw so many records broken, suggestions which stand out clearly are that:

(1.) Engine capacity must be reduced for future races. Machines of 500 c.c. are far too fast for the course, and we recommend limits of 350 c.c. for Senior machines and 250 c.c. for Junior mounts next year.

(2.) Competitors should carry numbers showing their actual starting positions. People round the course were quite unable to follow the progress of the race.

(3.) Consideration should be given to the question of riders finishing under power. In saying this, we realise the complications involved, and feel that the simplest rule, after all, is first man and machine over the finishing line to win—excluding, of course, outside assistance.

Of the technical considerations, single-cylinder engines have scored another remarkable and sweeping success. A fact clearly brought home in the Senior Race on Thursday was the utter futility of arranging both brakes on the back wheel. With the rear wheel locked and the front wheel free, nearly every machine under criticism slewed round; one rider was pitched without doing damage, and many others had narrow escapes. With both wheels braked it was clear that the maximum braking effect was possible, the machine thereby maintaining a straight line course.

Chain drive scored decisively in both Juntor and Senior Races, mainly, of course, because riders preferred to rely upon this system of transmission incorporating a countershaft gear box. The reliability of the Senior entry, considering the high speeds accomplished—there were fourteen survivors of twenty-seven starters—and the remarkable maintenance of power by the leading machines, needs special emphasis.

A superficial glance at the results would point to the fact that machines fitted with superefficient engines were unsuccessful, while those more closely following standard design made extremely fine performances. As a result it is easy to conclude that high efficiency engines are not desirable. This, however, would not be true, for high-compression overhead-valve engines are in their infancy as far as motor cycles are concerned. It is a fact well recognised in the trade that doubtful materials are too often prevalent just now; a bar of steel, for instance, which may be tested most carefully may, and does, prove to vary throughout its length for quality. All these troubles will be righted as time goes on, and enthusiasm and keenness enter the British worker's soul. Besides this, it would be unfair to blame the engine when in some cases the trouble was due to transmission details, which were unable to withstand the shocks due to the terrific acceleration of these ultra-efficient power units. All keen motor cyclists welcome the success of the standard machines, but no progress can be made without experiment, and the Tourist Trophy races provide the finest opportunity in the world for trying out improvements with a view to perfecting the future standard motor cycle.

Our congratulations are extended to those manufacturers who shone in the most sporting event of the year. Those enterprising firms who supported the Auto-Cycle Union in its decision to resuscitate the Tourist Trophy races now have the knowledge that thousands upon thousands of keen riders and prospective owners gave their moral support and followed the event with the greatest possible interest. Good is bound to result all round. The pastime has received a tremendous fillip, and manufacturers who looked ahead and participated have gained experience of incalculable value. Drawing office design is a necessary part, but the only true guide is the actual road test; and the undulating T.T. course provides that test as no other event can.

Speed Stretches.

WW HICH is the finest speedway in this country? Competitors in the Land's End runs will probably recall three miles of moorland road between Bodmin and Truro, which are of fair surface, as near-as no matter straight, devoid of side roads, and generally deserted. Here a man could do 100 m.p.h. or more with no danger to anybody but himself. On the Shrewsbury-Chester road there are some magnificent speed stretches, but only a man who knows it well can really open out, as there are innumerable cross roads which are not visible at sufficiently long range to permit much full throttle to a stranger. I always regard these two pieces of road as about the most tempting which I know.

A Smooth Passage and Low Tide?

CALM sea and high tide at Douglas are what all good motor cyclists sigh for when they go over to the T.T. When I crossed to the Island, the weather was good and the sea calm; but, alas, as the steamer drew alongside the quay a vision of dank towering masonry blotted out the view, and we realised we must carry our 998 c.c. cycles up an alarming series of steps rendered slippery by green slime. Four of the white-jacketed porters were consequently requisitioned. One of them left his hand inside the from wheel when his brethren began to push the machine across the deck. What he said sounded strangely melodic. I should judge that Manx is a good language to son to parrots, but unsatisfying talk for a really annoyeu in. So.

The Morgan Numan retries

UITE recently, as a passenger in a friend's car, I drove for sixty miles close behind a Morgan Runabout over very wet roads. Two points especially struck me about the behaviour of this little cycle car. The first was its steadiness in holding its track. The roads were not over nice, and my friend's four-wheeler occasionally called for repressive measures in its cornerwork; but the single driving wheel of the Morgan stuck to its course like glue. The second was its hill-climbing. Our car had an engine very little bigger than the Morgan, but its weight (like its cost) was at least 300% greater. This told on the hills. My driver was perpetually fiddling with his gear lever, but the Morgan neither slowed down nor changed gear on any of the grades which we tackled in its company. It is for this reason that the Morgan, like the G.N., makes a special appeal to motor cyclists, who resent being slowed to a crawl by very modest little hills. I cannot but think that the designers of small cars are making a grievous blunder in overloading their engines; many of their productions seem extraordinarily sluggish in hilly country when one is fresh from two wheels. On the average they are hardly superior on hills to a 31/2 h.p. sidecar outfit, which we all know cannot irritate a policeman when it is climbing a bit of 1 in 10.

Buying at a Distance.

THE other day I was consulted by a novice who wanted to buy his first machine. His capital was limited; he lived a couple of hundred miles from London and Coventry; he knew no expert in any of the great selling centres; and he was having a rotten time. Week by week he had pored over small prepaid advertisements, and had written to various advertisers, only to find that their wares were sold to people who had called round with the cash. Occasionally he saw a nice sounding 'bus advertised within a few miles of some burgh where he had a second cousin once removed. He got the cousin to call; the cousin reported that the advertiser seemed straight and the machine looked all right, but refused to take the responsibility of buying. I counselled. my consultant either to employ a big agent with a reputation for honesty, or to splash a few pounds on a visit to one of the more populous districts where he could inspect half a dozen machines during a weekend. I mention the incident to impress the big agents with the value of a long-standing reputation for absolute honesty in dealing with clients at a distance. It took this man some two months to secure a machine because he lived in a district where none of the big advertising agencies had yet established their name as a household word. On the other hand, small unscrupulous agencies had created such a local prejudice that the buyer refused to trust an agency; and if he had not met an honest vendor when he travelled, he might have come home with rather a dud machine. Big agents with an honourable name are one of the best assets the industry can possess; and I am glad to say such names are being developed.

To Take the Girl.

7 SPENT an interesting hour the other week in the showrooms of an agency which works a small market town of some 3,000 inhabitants, though the agent's "district" covers a large agricultural area. Money is so plentiful that the agents in such localities are buying up machines from other retailers at full list price, and can place lots of machines on arrival at figures well above the catalogue sum. Increased wages, aided by Army savings and gratuities, are enabling men to buy motor cycles who in 1914 never dreamt of such an extravagance. But all my enquiries and observations go to prove that the new class of buyer has a girl at the back of his mind. He will study a baby two-stroke regretfully, if there is nothing else in the window; but as a rule he will not buy it. On the other hand, if the exhibit is a variably geared 31/2 h.p., he cannot resist it. He may not have all the necessary capital ready, but he will arrange a partial credit, and either put his girl on the carrier or purchase a sidecar. This type of buyer can seldon in rise as high as the cost of a sidecar outfit de luxe, So we are likely to see an unusually brisk demand for 500 c.c. outfits in 1920, and I further fancy we may

Occasional Comments .-

get a big crop of pillion riding smashes, as many of the new men are absolute novices, and not a few of them reside in districts where the roads are peculiarly unsafe, *i.e.*, industrial centres or agricultural areas, the best roads being usually in residential regions.

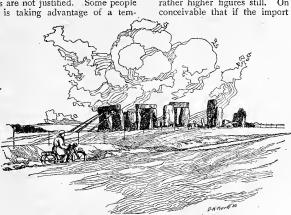

If the Sidecar is Superseded?

T is still quite on the cards that the sidecar may ultimately vanish. This assertion will strike many readers as akin to blasphemy, and I will explain that I am not speaking of to-morrow or the day after. Let me illustrate. At the present moment I know of a certain cycle car which can do 60 m.p.h. without hustling itself, and holds the road quite prettily at this gait. It will cost a little more than the modern sidecar de luxe, but not a lot. When the horse finally becomes extinct and our roads are reconstructed, we shall certainly get special motor roads, on some of which the speed limit will not be less than 40 m.p.h. Does anybody pretend that riders will select lopsided three-wheelers for such high speed work, when they can buy a road-holding four-wheeler at the same price? Consequently I regard the ultimate demise of the de luxe sidecar as certain, if distant. We shall come to regard the motor bicycle as a solo machine, pure and simple. If in the future it survives in its present form, we shall instantly recognise that it is absurdly heavy, and that its range of gear ratios is excessive. Light machines with a high bottom gear will be evolved. Of course, it may be that other tendencies will bring about these effects long before the sidecar is superseded; the tide is already setting in the indicated direction. As a rider to these remarks, let anybody who is planning a cheap-motor cycle recognise that two speeds (the lower giving a ratio of, say, 8 to 1) are ample for all essential purposes.

Prices and Profits.

S I go about the country, I find it is commonly believed amongst riders that the present prices of motor cycles are not justified. Some people think that the trade is taking advantage of a tem-

porary demand to profiteer. Others suppose that buyers are being debited with the entire cost of rebuilding, reorganising, and refitting works which . were either out of date or demanded considerable alteration after five years of war service. Two consequences follow from these suppositions. Some people abstain from purchase in the belief that prices will fall heavily when supply overtakes demand; they either do not ride at all, or make the best of

STONEHENGE. A relic from a period of England's history that is wrapped in mystery. The assumption is that this arrangement of huge stones was used in connection with Druidical worship, but no confirmation exists. Stonehenge is situated on Salisbury Plain, on the route of the London-Exeter Run.

an ancient machine already in their possession. Others dabble in a little illegitimate dealing, justifying themselves twice over-first on the ground that they have waited a year or more for delivery and have been humbugged by ludicrous promises, secondly because they will be hard hit by depreciation when prices tumble and feel that on both counts they deserve a little compensation. This is surely a complete misreading of the situation. £150 is a not uncommon figure for a solo mount: and £150 in 1920 is equivalent to £60 in 1914, judging by the average rise in other commodities. The Triumph and Douglas factories, which have never reduced or ceased the manufacture of motor cycles, have been compelled to raise their prices just as the new firms or the firms which switched into other industries during the war. There are concerns in the trade which, during the reconstruction period, have spent all their capital, all their war profits, and a good deal of their deposit money on those anxious eighteen months of outgoings which were not balanced by any sales at all. Prices on the whole are distinctly justified.

Will Prices Fall?

MILARLY it is very doubtful whether the marked drop in prices which many riders confidently expect will ever materialise. If existing figures were due to profiteering, or to charging the whole cost of reconstruction on to one year's output, a drop would be possible. I have denied both these theories. A fall in prices can, therefore, only result from improved technique in manufacture, or more strenuous piecework on the part of labour, or a parallel fall in the cost of wages, metals, coal, and other commodities which react on our industry so intimately. Economic prophecies are always rather risky, but my own impression is that we shall see no drop in prices unless there is a brief and temporary fall when over-production commences, and manufacturers battle for the market until the weaker firms go to the wall, and prices harden once more to present figures, or even rather higher figures still. On the other hand, it is conceivable that if the import duty is ultimately re-

moved in favour of free trade, and other nations manage their affairs better so that they can undersell us, we might be driven by sheer stress of lost trade, unemployment, and the like, to organise better, work harder, and accept a lower standard of living in order to produce more cheaply. On the whole, I should expect prices to rise gradually but moderately, interrupted by momentary confusion when over-production reshuffles the trade and selects the final survivors.

THE FIRST "LAND'S END-JOHN-O'-GROAT'S." Mr. Hubert Egerton arriving at the northern extremity of Great Britain on his front-drive Werner, August 7th, 1901. The last motor cycle record was made in 1911, by the late Ivan B. Hart-Davies on a 3½ h.p. Triumph. He covered the distance in 29 hrs. 12 mins., beating the previous record by nearly three hours. While maximum speeds were moderately low, the End-to-end record was one of the classics. Such records are not now recognised.

→ HE scooter awakes pre-historic memories under my grey thatch. The 1914 "lightweight" was usually a foul libel on an honourable name. It boasted a two-speed gear and other labour-saving devices, whilst the cynic who put it on the scales usually discovered that it weighed more than the full dress tourist machines which some of us oldsters bestrode about the year 1902. I suppose that quite a lot of 1914 little 'uns tipped the beam at 160 lb. or more, whilst others, more properly described as mediumweights, exceeded 200 lb. When weaklings first protested that motor cycling was degenerating into muscular tests for Sandows, our notion of a lightweight was the 11/3 h.p. (note the meticulous rating!) Clement-Garrard, 70 lb. all on. Since then 100 lb. has been conventionally accepted as the ideal maximum, but it has very, very seldom been reached in practice. I have not had a scooter on the scales yet; but if scooters are usually a lot heavier than the 50 lb. which their optimistic sales managers talk of, they come closer down to the dear little "C.G." than anything else of recent years.

Hobson's Choice.

When I first took to motor cycling, the market consisted exclusively of lightweights. It had to. It was the rule, rather than the exception, to finish a long ride either by train or with one's coat tied by the sleeves to the handle-bar, and one's back in the attitude necessitated by lawn mowers. Consequently, our machines seldom exceeded 150 lb. in weight; they perhaps developed an average of about 2 b.h.p. As none of us was sufficiently maniacal to go looking for hills, and to hear of Sutton or Dashwood was to map out a dodge-route, we ought to have had a good time. But we did not. The explanation is confined to one

By VETERAN.

Some Reminiscences of Bygone Days and the Forefathers of the Present Day Motor Cycle.

word—"belts." Some of them were of the twisted rawhide variety. Effete riders of to-day, accustomed to 11/8 in. canvas-cored rubber V belts, must imagine a strip of rawhide, sliced from the hide of a buffalo, and spiralled like a shaving off a big lathe. Handling was easy. You wound in up till it was just tight enough

shaft bushes without causing the engine to bind; and then you inserted a miniature meat hook through both ends. Its road behaviour was easily gauged. If the belt was pulling, you heard the periodic "tang" of the fastener against the pulley sides; if the belt ceased to pull, your speed dropped from 5 m.p.h. to zero, and the acrobatics required to balance the machine convinced you that it was at last stationary. These belts never gripped if the weather was rather wet or really dry. If there was no rain to damp the pulley and no dust to glaze the rawhide, progress was possible, provided you paused periodically to anoint the belt with dope. The dope-merchants were the chief liars and profiteers of that epoch. They knew our need, and they traded on We bought tin after tin, as each specific came, out; they all had an evil savour, and clung to the attire like tacky rubber solution. The best of them would make a bootlace belt grip for ten miles over level roads on a dull day following after light showers.

Belts!

Then the trade awoke to the fact that the bootlace belt was a dud. From the various new gadgets prescribed, I selected a Werner with a flat belt. I was beguiled by a pseudo-technical folder on the coefficients of friction. I did not know what coefficients were, but I gathered that leather on leather was the stuff to give 'em; and my new Werner had a pulley composed of perforated leather washers threaded over a ring of studs. I owe it to that machine that I became a sergeant-major before I was demobilised. No: I was not in the R.E. That Werner taught me to swear.

My next experiment was also ascribable to an advertising manager, who posed as a technical expert. His slogan was that the bootlace belt was really an

Twenty Years of Lightweights .-

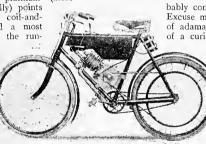

excellent belt, but that our napkin ring pulleys did not give it enough contact area. I agreed ex animo. He pursued his theme to the effect that, low gears, being essential, it was impossible to increase the overall diameter of the aforesaid pulley. (" Heaven forbid!" I ejaculated, piously, as even with a two-inch pulley I could never climb my own drive.) He concluded triumphantly, "But it is practicable to increase the effective diameter of the engine pulley." ("There's a catch in this," I mused.) At last the hush-hush gadget was disclosed-"So on our 1899 model (or whatever year it was) we take the twisted rawhide belt twice round the engine pulley by means of a double spiral groove machined thereon, and belt slipping with the 3 h.p. Hotstuff is impossible!" I glowed with admiration and gratitude. I regret to record that this man was a liar. The boot-

lace of the 34 h.p. Hotstuff was as much of a backslider as its predecessors. The next brain-wave was my own. Why not take the belt several more times round the pulley? I had a special pulley made, and did so. As a rule, the belt jammed on the pulley, but if you let it get glazed, it worked—and slowly sawed through the rear forks. Finally, the Lincona and Lycett belts opened up a better world for all of us.

On the rare occasions when our belts transmitted the puny impulses of our microscopic engines, we got stalled with contact breaker troubles. The adjustment of the platinum (alias

German silver, usually) points with these extinct coil-and-battery ignitions had a most mysterious effect on the running. I am no electrician, and must state facts rather than

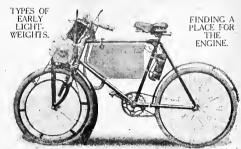

must state facts rather than reasons. To put it tabularly, the correct gap spelt heaven. If the gap was .ooooin. too wide or too small, the machine might start, but would only de-

Above the front down tube-an early Rex.

In the position now accepted as correct-1902 Werner.

On the steering head-Werner front drive.

velop $\frac{7}{21}$ h.p., instead of its rated $1\frac{1}{2}$ h.p. If the gap was .oooin. out, the machine would be immovable. The

consequence was that breakers of the baser sort required readjustment every ten miles, and thus afforded a pleasant foil to the belt stoppages. Dreaming of the modern magneto contact breaker you pro-

Below the front down tube—a 1901 Quadrant of the modern magneto contact breaker, you probably consider that no great hardship was involved. Excuse me, the modern breaker is apparently made of adamant. The ancient breaker was constructed of a curious metal, possessing all the properties of putty. The screw threads in its base-

metal, possessing all the properties of putty. The screw threads in its baseplate melted in warm weather. The German silver rivets fell out of the blade and screw. The spring blade took an L shaped set after a hundred miles or so. Or perhaps a sudden stoppage of the exhaust burr, accompanied by a gentle tinkle from the neighbourhood of your right boot, broke the news that all the bits were playing rugger inside the breaker cover. Even more probably, during a record bout of l.p.a. up a gem of a hill (say

1 in 52), your boot caught the breaker, and it squashed out flat, like a pat of butter when stepped upon.

On the rare occasions when neither belt nor breaker misbehaved, the accumulators—but there, I spare you. Only let me say that at one time in the era manufacturers only fitted a single battery. Now we were certainly fools, but not quite such fools as to venture out of hail of the railway on one battery. So I invested in a spare 8 a.h. accumulator, complete with neat pigskin case at 21s., and strapped it to my carrier. Dismounting one day to admire a Devonshire view, I saw the pigskin case, stained green and corroded away by leaking acid, depending precariously by a single strap. If you know the Sunday train service in Devon, you will not marvel that I packed

Twenty Years of Lightweights .-

the battery in leaves and grass, and bestowed it in the TO SUIT ALL side pocket of my new dazzle-the-maidens reefer jacket (dove grey flannel, with narrow white stripes). When AGES AND EITHER I reached my destination, there was about .55 of my jacket left; and I should probably have been arrested for motor cycling in a state of nudity if the main battery had not gone phut fifteen miles from home, and caused a transfer from my pocket to the tank. Things have improved since then.

A recent and original design of lightweight-the Pullin.

Things have improved since then. The first roadworthy lightweight I ever straddled was the early Douglas with the direct belt drive.

the direct belt drive. It cannot have weighed more than 1 cwt., and was a good 'bus when the belt was not swinging the lead. A little 2½ h.p. Ariel was fascinating in its way. The very first two-stroke Levis with 24in. wheels was the progenitor of all scooters, and could tackle 1 in 6 with a rush. Then the modern types came along in battalions—baby two-strokes, baby four-strokes, some with gear boxes, and most of them with absolutely reliable ignitions and decent transmissions. Of course, the weight piled up in proportion, until the scooter dawned on an astounded world. A good scooter should do 1,000 miles between road stoppages, if I am any judge.

That is a far, far proposition better than the prehistoric motor bicycles ever offered us. They sold quite freely; and they would sell still if nothing better was on offer. Now whilst we grin and curse as we remember how they played us up, every veteran has grateful recollections of their handiness: their excessively 1 0 w weight was a huge and joyous asset. This is where the scooter should score. The people who blink at 150-

450 pounders may jump at 50 lb. scooters. Nor have I elderly tallow chandlers only in my mind. Dukes will buy them. The Rolls-Royce his grace urgently requires for himself. The duchess has gone to a bridge party on the Daimler. The Sunbeam is being revarnished. The estate agent is out on the Singer. Plantagenet and Tudor and Rowena all want something to take them to golf or tennis. In 1914 the Duke ordered Smithkins to make a détour and drop the young people at the links, etc. In future the butler may telephone to the garage for the scooters to come round at once please.

"REVS" versus CUBIC CAPACITY.

A Discussion on the Type of Engine for Fast Road Riding.

LISTENING to a conversation a few days ago between three or four motor cyclists, I gathered that none of 'these enthusiasts quite realised the factors which decide and govern the road speed of a motor cycle. One of them had a 9 h.p. clutch model solo mount, and he it was who proved to his own satisfaction that a machine of the type he favoured was inevitably the fastest on the road. He argued that, in order to obtain road speed and overcome wind resistance and "friction," large cubic capacity was necessary, and that, of course, it was foolish to suppose that any machine of 500 c.c. could possibly hold its own in-a real speed test with a monster of the 1,000 c.c. class.

Now this may be true up to a certain point, but as regards the ordinary road rider, many other factors enter in besides engine power, and the gentleman just mentioned had completely lost sight of a point which is the speedman's chief hope in life—the ability of an engine to "rev." Given two track racing machines run under track racing conditions, so that the larger machine could be geared for that purpose only, it could doubtless be a little faster; but the writer's experience is that the fastest touring machine used under ordinary touring conditions is one of approximately 500 c.c.—preferably (owing to its even power impulses) an opposed twin. The reasons for its

superior speed are comparative lightness, very rapid acceleration on corners, and, most of all, its ability to "rev." indefinitely.

Very few large engines can turn over at so high a rate of revolutions as their smaller brethren, so that the only way to obtain higher road speeds is by making use of higher gears. This means that one loses comparatively on acceleration, even though one may gain slightly on the level, and even allowing that the acceleration of both machines may be equal, I have yet to ride the 800 or 1,000 c.c. twin that could be hauled round corners at the same speed as, say, a T.T. Norton or 3½ h.p. Brough. Therefore, for the big machine to prove as fast as the smaller one on an ordinary give-and-take road, it has not only to make up on the level what is lost on slackening at the corners, but it has also to make up the extra half second needed for the acceleration necessary to bring it back to its maximum speed, i.e., to prove faster, it must not only be considerably faster on the level, but it must possess powers of acceleration in proportion to its maximum speed—a combination very difficult to obtain.

As a matter of fact, colossal c.c. is entirely unnecessary for speed work in solo riding, for a heavy machine is neither so safe nor so easily handled as one of medium weight.

Chinook.

A Sporting Race rendered particularly exciting by the Fact that three Leaders retired. Excellent showing of Two-stroke Machines. New Record created for the Junior Lap-

Held on June 15th, over a distance of 188 miles 6 furlongs (five circuits of 37 miles 6 furlongs each), limited to machines of cylinder capacity not exceeding 350 c.c., with a class for 250 c.c. engines run concurrently for "The Motor Cycle" Cup.

AST week's race for the Junior Tourist Trophy provided thrills in abundance. The result of the race was in doubt throughout, for, after leading for two and a half laps, Eric Williams (23 A.J.S.), the swiftest rider on the course, retired with engine trouble. Moreover, H. R. Davies and N. F. Harris, on similar machines, who held second and third positions, also disappeared from the running in that fateful third circuit, and thereafter a new complexion came over the whole event. Even the eventual winner and the second rider were dogged by ill-luck, for, on the final stretch from the summit of Snaefell they experienced trouble which, lowever, they both overcame.

Before the Start.

The morning broke fine, and by eight o'clock officials, competitors, and spectators were much in evidence at the starting point. There were many finishing touches to be done. Prescott was seen patching his rear tube as the machines were ranged in line in the enclosure, Pike (Diamond) was fitting a new rubber lubricating pipe, and the rear tyre of Eric Williams's machine suddenly subsided with only ten minutes to go, and he had hurriedly to fit another wheel. F. W. Applebee carried No. 13 on his Baby Levis.

A minute or two before the start, His Excellency the Lieutenant Governor of the Isle of Man arrived and took his seat in the stand, remaining for some time as an interested spectator. He was also seen an interested scrutiniser of the score board before the finish of the race. It was a comparatively small entry this year for the Junior T.T., but the enthusiasm and interest of the public seemed in no way minimised on that account. Two marcons announced the start, and promptly at 9.31 a.m. F. W. Applebee, the fifty-eight year old rider,

was given the word "Go" by Mr. A. V. Ebblewhite to the accompaniment of a rousing cheer. His engine fired immediately, and he disappeared over the summit of Bray Hill at a lively hat. Kuhn, incidentally one of the youngest competitors, followed one minute later. The burly R. O. Clark looked oversize for his plucky little Levis, though the

The burly R. O. Clark looked oversize for his plucky little Levis, though the combination was destined to show up so prominently. Pike's Diamond crackled very healthily. In fact, all got off the mark very promptly except Loughton

RESULTS:

- Cyrıl Williams (2³/₄ A.J.S.)
 J. A. Watson-Bourne (2³/₄ Blackburne).
- 3. J. S. Holroyd (23 Blackburne). 4. R. O. Clark (21 Levis)

(Winner of "The Motor Cycle" Trophy for machines under 250 c.). Average speed of winner, 40-74 m.p.h. Average speed of R. O. Clark (Levis), 38-1 m.p.h.

(Douglas), whose engine at first fired on one cylinder only, and Marks (Diamond), who had difficulty in getting his machine over compression. When he did he accelerated in fine style. Enticknapp (Blackburne) made a particularly fine start, only eclipsed by the A.J.S. riders, who pushed along, at once "freed" their engines to a thunderous roar, and gradually let in the clutch. Many seconds were gained by Eric Williams in the 300 yard stretch before he disappeared from view. News now arrived from Ballacraine by telephone to the effect that Applebee had retained his leading position.

effect that Appende has received here leading position.

The Ivy ridden by Dallison got off the mark very impressively, whilst Sclater's Aurora simply roared away. Sheard, the

old Rudge T.T. rider, got away splendidly on his A.J.S., and received extra ovation no doubt because he is a Manxman.

Howard Davies demonstrated again the extra speed possessed of the A.J.S. mounts in comparison with other makes in the race. The useful telephone now maintained the interest at a great height by conveying news that the first six men had retained their starting order up to Ballacraine (seven miles from the start).

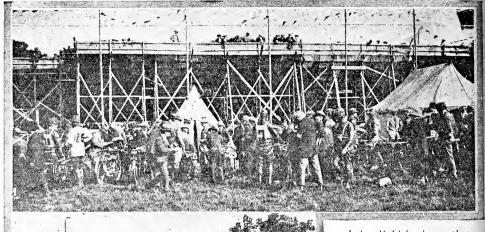

had retained their starting order up to Ballacraine (seven miles from the start). A Douglas, with Philipson pulley, ridden by Wills, got away splendidly, also J. S. Holroyd (Blackhnrne), who at first hesitated to turn on his petrol tap. Wade (A.J.S.) made a censational start. Not satisfied with 30 m.p.h. in as many yards, he flooded the carburetter, and bumped on the saddle, to swoop down Bray at over 50 m.p.h.

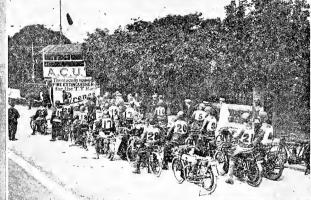

The Last of the Starters.

Now Kirkmichael news was received, and it was observed that Kuhn (Levis) by the fourteenth mile had forged ahead of F. W. Applebee. The exhaust note of the Douglas ridden by A. H. Alexander was suggestive of a rotary aero engine; he got away in magnificent style. Haden, (New Comet) got away comfortably, followed by Cyril Williams (A.J.S.), who was last but two to start. Milner (Diamond) placidly smoked a cigarette as, like an acrobat, he vaulted into the saddle of his mount. Eric Longden brought up the rear, and actually wore

no goggles.

Then there followed a lull, what time those who were following the race keenly awaited news of the arrivals at Ramsey (twenty-four miles). Soon we learned that Kuhn was still leading the procession. Incidentally, all the twenty-four starters were thus grouped in the first twenty-four miles. Kuhn had traversed this distance in less than thirty-three minutes, and this on a tiny two-stroke.

In the paddock before the start. Last minute preparations.

short space of time for petrol and oil. Off he went again, with a ronsing cheer of encouragement from the spectators.

Clark was the next arrival, and pulled up for replenishments. Hard on his heels was Eric Williams, who, needing no supplies, dashed past the stands at a high speed.

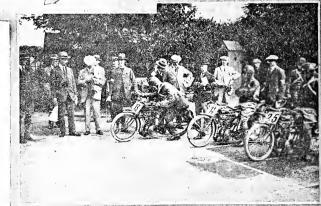

Average over 50 m.p.h.

Clark restarted at exactly 10.27 a.m. When the times went up, it was seen that Eric Williams had averaged over 50 m.p.h. A brief interval and two competitors arrived side by side, Davies (A.J.S.) passing Pike (Diamond) on the starting line itself. Davies's number was quite unreadable, showing the state of theourse after Monday's continuous rain.

9,30 a.m. The riders assembled for the start.

R. O. Clark (Levis) was signalled next in order. Pike (Diamond) third. Eric Williams (A.J.S.), who started tenth, was now in the fourth position, followed by Wetzen Bourne, (Blackburge).

was now in the fourth position, followed by Watson-Bourne (Blackburne). From the starting point mist could be seen on the mountain, and, indeed, the outlook became dull, and a few rainspots fell. By the time the first lap was nearing completion, the crowd had swelled considerably, the stands being full but not erowded. The competitors attendants, in the pens arranged in front of the stands, got their fuel supplies ready in anticipation of early calls, and craned their necks along the straight stretch after the Craig-na-Baa positions had been announced, showing Kuhn still leading so far as position was cencerned, but not on time, since other riders started later. A shrill whistle announced Kulm's approach. He dashed up on his Levis, pulling up in an amazingly

9.31 a.m. F. W. Applebee (21/4 Levis), the first man away, being given the word to start.

The second man to start, G. Kuhn (24 Levis), maintained his position on his first lap, which he covered in 52m. 45s. Here he is seen at Craig-na-Baa after his descent of the mountain.

In Glen Helen, and under the trees from Sulby to Ramsey, the roads were

from Sulby to Ramsey, the roads were wet, and two very heavy local showers fell, but generally the course was good, with a slight mist on the mountain.

Watson-Bourne (Blackburne) next passed in excellent style, with Marks (Diamond) a few hundred yards behind. The telephone again enabled those in The telephone again enabled those in the stands to keep acquainted with the progress of the race, for Eric Williams was shown to have passed Ballacraine, on his second lap. Loughton (Douglas) went ahead without stopping, and soon of the Harris (ALS) with a ratio. after, Harris (A.J.S.), with a rever-

H. V. Prescott, on his 1914 A.J.S., at Keppel Gate:

On the mountain road. S. H. Haden (New Comet), who was out to finish, rode consistently at an average speed of 30 48 m.p.h.

berating crackle. Dallison (Ivy) soon came into view, sitting his mount in perfect style. News now came of Enticknapp's retirement owing to a sheared key on the flywheel; Alexander (Douglas) also experienced engine trouble near Glen Helen.

Houlberg (Wooler) and Holroyd (Blackburne) followed in close order on completion of their first lap. Wills (Douglas) passed at a good speed, followed by Cyril Williams. Then F. W. Applebee dashed into the control W. Applence dashed into the control at a great pace, receiving a great ovation, despite his late arrival. He was seen to be wearing ordinary glasses, with his goggles on his helmet. He had, it appears, experienced a broken spring on the control of the control o the magneto rocker arm, and fortunately carrying a spare, was able to right matters after losing much valuable time. He was off with tanks brimful in less than a minute.

J. A. Watson-Bourne (23 Blackburne) at Keppel Gate.

Prescott's exhaust was noticeably fluffy, but he was going well. The Ramsey telephone announced that Eric Williams still led at that point, with Clark second, and H. R. Davies third.

Lengden now completed his first lap.

Lengden now completed his first lap, and on lifting the valve lifter to pull up fer petrol, his belt jumped the pulley, and provided an effective brake for the back wheel. Replacing this, he walked to his depet and filled up, receiving the usual encouraging cheer as he restarted.

FIRST LAP FOSITIONS AND TIMES.

	At the finish of the second	lan	- 10	ric.

At the finish of the second lap Eric Williams free-wheeled at speed into the control for replenishments, his attendant dexterously filling both tanks and enabling a restart in less than fifteen seconds. Davies, on another A.J.S., followed, and, after filling in feverish haste, a deafening roar heralded his departure. A Levis, R. O. Clark up, followed hard on his heels after another lap at splendid speed. Replenishments were ready, and in a few seconds the special filling devices had done their duty.

Haden was neticeably slower, but the Climax engine of his New Comet sounded healthy enough. In the excitement Harris had to lock the back wheel of his machine to stop at the proper depet. After drinks for man and machine, he was away again, with a deafening rear characteristic of the A.J.S. when the clutch was released. Telephone announcements showed that Wade (A.J.S.) was out with engine trouble at Ballaugh, and

that Milner (Diamond-Jap) retired at Kirkmichael owing to a broken valve cup. This rider, with two others who dropped out, thereupon chartered a special tram to Douglas at the terrific (1) charge of 50s. in order to witness the finish. Watson-Boune, after two laps, halted for supplies at the depet. Men and machines were now showing signs of the gruelling they were receiving, denoted by eily breeches and boots, and dusty faces and clothing, with an admixture of genuine mud-splashes.

Loughton (Douglas) and Kuhn (Levis)

Loughton (Douglas) and Kuhn (Levis) followed for replemishments. The latter banded in his spare tube. News from Ramsey showed little alteration in the leaders' positions, Eric Williams, going

His Excellency the Lieutenant Governor of the Isle of Man, Major-General Fry, C.B., C.V.O., who witnessed the race.

great guns and delighting those assembled at the corners with a lurid exhibition of corner work, was first here on the third lap. His time for the second lap was 44m. 6s, which sets up a new record, and those who have seen the practising and observed the fleet of A.J.S. machines were not surprised at the leadership already created.

SECOND LAP POSITIONS AND TIMES.

		h.	m.	s.
1.	Eric Williams (27 A. J.S.)	1	29	20
2.	H. R. Davies (23 A. J.S.)	1	32	11

	er in indicen (-1 in order) ittiti	_		

When Cyril Williams came into his depot, Bey Scouts rushed out to clean the indecipherable numbers. "How am

I?" he demanded, and when told that he was some minutes behind the leader, shouted that he had lost several minutes at Creg Willey. Meanwhile he tied his contact breaker in the fully advanced position with a piece of bootlace. Whereas Houlberg (Woeler) stopped for supplies, Wills (louglas) forged ahead.

Lengden distinctly webbled as he sped past the stands, due no doubt to his riding position. Prescett (A.J.S.) refilled on this lap from ordinary tins, and did not forget a personal reviver. There was the usual cheer for Applebee as he completed his second lap, and he again stopped at the depot.

The ranks were becoming noticeably thinned, for six failed to complete the first lap, while another dropped out on the second, and five on the third circuit.

To save time, Dallison (Ivy) unscrewed his tank caps as he pulled up for petrol, and got away again apparently in fine fettle.

An Entire Change of Affairs.

A lull followed, the leaders on the third lap being eagerly awaited. To the consternation of those at the stands, the Norwich rider, R. O. Clark, on the 250 c.c. Levis, roared round the bend ahead of Eric Williams (A.J.S.), who had led at Ramsey, with Davies (A.J.S.) next, and Clark third.

next, and Clark third.

Clearly something had happened to
the A.J.S. leaders. As the minutes
relled by A.J.S. hope began to crumble,
and it was not for some time that news
reached the start that Eric Williams had
retired 500 yards from the Bungalow

P. Pike (Diamond) at Ballacraine.

The Junior T.T. Race,-

with a broken mainshaft. ordinarily enough, Howard R. Davies, the second man on a similar mount, experienced a broken exhaust valve just below the Bungalow.

Naturally this unexpected contretemps placed an entirely different complexion on the race. R. O. Clark for some time remained the leader, and speculation was even rife as to whether he could on his even rife as to whether he could on his pluckly little 250 c.c. miniature carry off the Junior T.T. as well as The Motor Cycle Lightweight Trophy. Pike withdrew at Craig-na-Baa with a broken exhaust valve, and still a further amendment of the leading positions, for Harris (third) stopped finally at Ramsey due to shearing his countershaft dog in accelerating after the Ramsey hairpin.

Hopes of those who maintained regular if comparatively slow laps rose noticeably. Haden (New Comet) came in and enjoyed a sandwich as his mount was leisurely replenished. Subsequently overhead-valved Dot-Jap was standing up splendidly. He was duly filmed as he took aboard replenishments. "Pa" Applebee, the most popular rider of the bunch, was cheered again and again as he swept by. The Blackburne machines were upholding their good name for rewere upnotating their good name for re-liability, and were creeping up into lead-ing places, particularly Holroyd and Watson-Bourne, who were having a little duel on their own. Wills's Douglas, too, suddenly jumped ahead to the obvious delight of Mr. Philipson, whose pulley he was using.

Thinning of the Ranks.

With the ranks still further thinned-for Houlberg (Wooler) stopped with a broken connecting rod which fractured the rear cylinder at Ballacraine-spectators had time to consider the possibilities: and there were still many! Would Cyril Williams hold out? Could Holroyd and Watson-Bourne improve as they were showing signs of doing? And

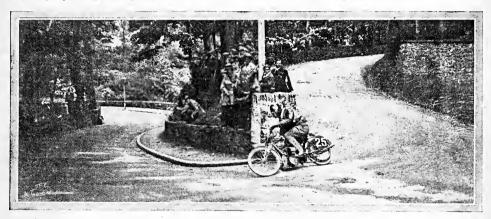

single-cylinder Blackburne going better

than ever.
The Ivy followed, after another consistent lap, with Prescott (A.J.S.) in close attendance. Then there was a long interval, after which Holroyd appeared on his Blacklunne, halting for petrol while he kept his engine running. Kulm dashed in before Holroyd left, and was extremely nippy in getting away.

Doubts.

Kirkmichael news announced that Kirkmichael news announced that Williams was going well at that point. Haden was clearly demonstrating reliability, for he toured past on his final lap. Loughton (Douglas) stopped for replenishments, and then, during one of the many lulls, one wondered—and wondered !

With so much in hand Cyril Williams seemed a sure winner, but with experience of so many surprises in the earlier stages of the race this year's T.T. seemed to be regarded as "in the air."

At Governor's Bridge. R. O. Clark (Levis) takes the acute bend at a good speed.

Cyril Williams roared over the line to maintain the leading position attained by his namesake on an A.J.S. Thus he had crept up from the sixth position in the first lap to fifth in the second and first in the third lap.

THIRD LAP POSITIONS AND TIMES.

	0 3777777 (00 1 7 0)	h.	m,	S.
1.	Cyril Williams (23 A. J.S.)	2	39	5
2.	R. O. Clark (21 Levis)	2	48	21
3.	J. S. Holroyd (2) Blackburne)	2	51	59
4.	J. A. Watson-Bourne (2] Blackburne)	2	54	47
5.	Eric Longden (2) Dot-Jap)	2	55	19
6.	A. E. Wills (23 Douglas)	3	4	35
7.	G. Kuhn (2† Levis)	3	6	21
8.	N. W. Loughton (22 Douglas)	3	9	52
9.	F. W. Applebee (21 Levis)	3	33	48
10.	H. V. Prescott (23 A. J.S.)	3	41	47
11.	P. G. Dallison (23 Ivy)	3	46	30
12.	S. H. Haden (23 New Comet)	3	51	58

Clearly so it seemed the race was becoming more a test of reliability than speed, for the fleetest riders had set speed, for the neetest raders had set themselves such a hot pace that they were cracking up their mounts. Re-straint, so it seemed to the onlooker, would have been a better policy. Loughton (Douglas) halted for supplies and restarted well, followed by Wills on a similar mount, and Longden, whose could Clark maintain the magnificent cornering he was performing without mishap? Such were the musings inspired by the open nature of affairs. The sun condescended to shine again, and the conditions were now ideal.

A roar of a two-stroke, and R. O. Clark dashed up to the control for supplies after four memorable laps, halting three minutes. As he commenced the final circuit, he was accorded a genuine cheer, for his plucky performance on so tiny a machine had proved a real eyeopener.

The Winners.

Now Cyril Williams was anxiously awaited again, and in a few minutes he arrived, locking his back wheel to pull up. "Am I leading?" he demanded excitedly of the people who knew no more than the rider, and were content to cheer him on. On being told that he was several minutes ahead, he hastily mounted and was off in a twinkling, the drone of his engine being heard until he was fully half a mile away. Watson-Bourne came in at the same instant, his

When the Ramsey positions were notified, it was observed that Clark's Levis was still ahead, Williams (A.J.S.) now pressing him closely, though he had started twenty-four minutes after Clark.

Another long period of waiting, during Another long period of waiting, during which Longden was notified at Craigna-Baa, and soon he passed by on his final lap, with Applebee close behind. His engine was still in magnificent fettle, and one recognised now the importance of the minutes lost on his initial lap. A cheer went up as "No. 4" (Cyril Williams) was announced at Craig-na-Baa, followed by Watson-Bourne. Where was R. O. Clark, one wondered? At

Bringing in the winner. Cyril Williams (A.J.S.)

Wills (Douglas) was juncture announced as having fallen at Craig-na-Baa, without doing himself any damage. To the astonishment of everyone, J. A. Watson-Bourne (Blackburne) finished first amid cheering, having passed the leader soon after the descent of the

To add to the confusion, R. O. Clark was announced "going hard" at Craig-na-Baa with a flat tyre. There was general regret for the plucky Levis rider, and in a few minutes he came home, with the front wheel wobbling ominously due to a bad fall, and the front tyre flat, to finish the most meritorious perform-

mountain.

ance in history for such a tiny mount.

Thus he easily carried off The Motor Cycle Trophy presented to the A.C.U. for the development of lightweight machines under 250 c.c.

With eleven minutes to go to enable Cyril Williams (A.J.S.) to come home a winner, no news could be obtained of his progress. The spell was broken when he appeared round the corner, vigorously

propelling the machine in free engine with his foot, his engine stationary.

The cheers that went up were thoroughly de-served, but Williams, half dazed with such exhausting work since he Craig - na - Baa, passed ' where his gear trouble experienced. was con. tinned on brushing marshals and photographers aside until he collapsed over his machine.

Hardly had the cheers died down when J. S. Holroyd dashed home to add further lanrels to the Blackburne name. Meanwhile, Prescott (1914 A.J.S.), who was suffering constant overheating on the mountain, passed on his last lap.

Kuhn arrived home on his Levis, the note of the THE LAST LAP-POSITIONS AND TIMES.

Fastest lap: Eric Williams (2) A.J.S.), 44m. 6s. (second lap), equalling 51, 36 m.p.h. The following started, but retired first lap: 0. Wade (A.J.S.), T. M. Sheard (A.J.S.), P. J. Enticknapp (Blackburne), N. C. Sclater (Aurora), A. Milner (Diamond), and A.H. Alexander (Douglas).

IMPRESSIONS OF THE JUNIOR RACE.

OBSERVATIONS FROM CREG WILLEY.

HE wonderful climbing of the small Levis machines stood out prominently, almost without other exception comalmost without other exception competing machines appeared to be overgeared or kept on too high a ratio. All A.J.S. machines were fast, and accelerated wonderfully as the gradient eased off. A few cornered on the throttle instead of cutting out, and incidentally there may be a good deal in this from the lubrication point of view, since there is a greater tendency to draw up oil on to the piston. Alexander, on his old Douglas, had engine trouble part of the way up the hill—an unexpected piece of bad luck with such a well-tried machine. At the end of the second lap positions were easy to follow, but after the failure of the leading A.J.S. machines the public had but little idea of relative positions.

BALLACRAINE.

THE cornering at Ballacraine was good on the whole. Of the leaders, Holroyd and Cyril Williams were the most cautious, and the Levis riders, including the veteran Applebee, were very fast, and Watson-Bourne on his last lap was gone in a flash.

Houlberg's Wooler broke a connecting rod within sight of the famous corner, and Longden stopped in an attempt to cure misfiring on the front cylinder, but had to continue with only a partial cure.

RAMSEY NOTES.

T was a poor race for the spectators scattered along the remoter roads. The starting order and time allowances were generally unknown. Gus Kuhn (No. 10) reached the Gooseneck at 10.5 a.m., and R. O. Clark (No. 25)

was just two minutes behind him. Not a soul on the corner except the writer had a notion what starting interval had separated the pair, and he was not certain separated the pair, and ne was not certain to a minute or so. So the public interest—until most of the entry had been weeded out—was reduced to taking lap times and watching the cornering. Not until the fourth lap was it possible for the ordinary spectator to judge how the men stood,

A Corner Artist.

Beyond question, the A.J.S. machines had only to finish to win. Their speed between corners and their acceleration after a corner were of the senior type, and made most of their rivals look paltry. But the tremendous "vank" with which their super-efficient engines took up the drive after a hairpin suggested that the transmission might be overtaxed. Eric Williams is a real corner artist—diminuendo, pause, crescendo, fortissimo—like Sonsa's band. The hesitation, engine splutterings, and wobbles put up by some of the tyros showed how experience counts. R. O. Clark, ambitious to win with a smaller engine, was also magnificent. Out-stripped on the straights, he cut his corners faster than anybody else. In the early laps he was content with a foot early laps he was content a look to spare: in the later laps a matter of inches satisfied him. Such observations furnished the isolated watcher with his sole interest until his own watch told him the "growing lap times." Dullness increased as the dwindling string tailed out; for example, lap four consisted of twelve men, whose passing was spread out over nearly an hour. The scattered watchers pray for a bigger entry in 1921, coupled with a more intelligent publication of the starting order and times. .

R O Clark on the Levis, with which he won The Motor Cycle Trophy for 250 ctc. machines. He finished fourth at an average speed of 38:31 m.p.h

AT GOVERNOR'S BRIDGE

OVERNOR's Bridge is on the loop introduced this year, is a mile from the finish, and can only be described adequately as a Z bend. Practically every connection negotiated the corner with great caution, the general tendency corner at a wide radius, and during the earlier part of the race a small wet patch from the recent rains caused one or two riders to skid momentarily.

The first competitor at this point was Kuhn (Levis), who approached the corner rather too fast and skidded, but he managed to keep his scat and got away all right. R. O. Clark (Levis) had the same luck a few minutes later. Misfortune overtook Applebee on his Levis after making an excellent performance on the corner, owing to magneto trouble, which delayed him fully twenty minutes. Shortly after Pike (Diamond), failing to Snorty after Pike (Diamond), failing to slow up soon enough, bumped against the far side wall. A rather curious manœuvre resulted from Loughton's (Douglas) inability to get round the bend. Finding himself in danger of colliding with the wall in front, he wheeled off to the left and made a complete circle, which brought him round in a position to get away again.

The Trouble Corner.

During the second lap, Applebee stopped in almost exactly the same manner as on his first circuit and in the same spot after the bend. On this eccasion he restarted, and only managed to get away after an interval, his repeated misfortune becoming the subject of considerable sympathy by the crowd of onlookers. Two more competitors suffered common troubles on their third laps immediately on negotiating the corner, Clark (Levis) and Loughton (Douglas) both breaking transmission chains, which, however, were soon replaced.

The cornering work of Eric Williams and H. R. Davies was perfect, the riders coming down the approach and taking the sharp bend at a slow but beautifully steady pace on the only two occasions they passed Governor's Bridge. The same applies to the Blackburne riders and machines, and, although they were a little slower, they cut the corner very close in the same manner as the A.J.S. riders.

Two Winners.

In the last lap, R. O. Clark (Levis) made a good turn at this spot, despite the fact that his front wheel was wobbling badly and had a flat tyre as a result of a previous mishap. This competitor looked ill and almost exhausted by the former of the f hausted, but carried on to the finish, although struggling under great diffi-culties. Soon afterwards, C. Williams on his A.J.S: negotiated the bend by paddling his machine along by his feet.

Considering the nature of this corner, the incidents related were the only features of the racing at this spot, and all the other Junior competitors managed the corner with skill born largely of caution in the practice laps.

THE JUNIOR T.T. WINNERS.

YRIL WILLIAMS, who sensationally won the Junior T.T. event, averaging 40.74 m.p.h., rode a single-cylinder A.J.S. machine with a 74×81 mm. engine, having overhead valves in a detachable head. A four-speed gear is provided by a dog clutch irrangement on the mainshaft, in combination with a two-speed countershaft year. He is no relation to his namesake Eric, the previous holder of the trophy, to whom, it may be recalled, he finished second in the last Junior T.T. race.

After congratulating him on a fine achievement, we enquired if he stopped at any point other than at the replenish-

Cyril Williams, the 1920 Junior T.T. winner.

ment depot. "Yes," he said, "twice. I stopped at the top of Creg Willey Hill, as the ignition lever came loose on the handle-bai," and pegged it in position. At the end of that lap I tied the contact breaker in the fully advanced position with a bootlace. On the last lap, too, I took the Ramsey hairpin too wide, ran my back wheel into the loose gravel, and skidded over sideways and bent the footrest. The engine kept running, so I picked up the machine and restarted, stamping the footrest straight as I ascended the mountain." "What happened on the last fateful stretch?" "Well, all went well until I got through Keppel Gate, when the gear refused to operate, so I simply free-wheeled down to Hilberry Corner and I pushed and paddled alternatively to the finish, which thoroughly exhausted me."

The gentleman who was distributing packets of court plaster to competitors before the start meant well enough—but——?

At times it was-deadly slow on the grandstand while waiting for the comparatively few competitors to pass—and the musical selections were entirely in keeping. A Jazz band is indicated.

One competitor had a genuine joy ride. It was Haden (New Comet), who had a snack at his depot after completing each circuit.

"Dogs gone" was a frequent expression on Tuesday to explain retirements. Not real dogs, of course!

"Did I know my position? Not exactly until the end of the fourth lap. When the cameras were pointed at me towards the end I guessed the reason. Cyril Williams is thirty-two years of age, and has an agency for A.J.S. and Levis machines in Wolverhampton. It

Cyril Williams is thirty-two years of age, and has an agency for A.J.S. and Levis machines in Wolverhampton. It was only at the last minute that he came over to the Island to ride in place of a man hurt in practice. He used gear ratios of $4\frac{2}{5}$, $5\frac{2}{5}$, $6\frac{3}{5}$, and $7\frac{1}{2}$ to 1. His machine weighed 217 lb. and himself 134 lb. Equipment included Thomson-Bennett magneto, Renold chain, Avon tyres, and Amac carburetter.

The Second Prize Winner's Experience.

A typical sportsman is Captain J. A. Watson-Bourne, of Atherstone, the second man home, less than ten minutes behind Cyril Williams. He is but twenty-four years of age, but thoroughly accustomed to speed work, for he was a civilian pilot before joining the R.A.F. Geared 5, 6½, and 9½ to 1, his single-cylinder Blackburne ran magnificently, though at times on the ascent of Snaefell mountain the low gear was resorted to. What he lost in seconds here he made up for on the corners, he told us. Watson-Bourne enjoyed a non-stop run except for two stops for petrol and oil. He had no knowledge of his position in the race until some friend put two fingers up suggestively, and for miles he was left wondering if they meant what he hoped

I. A. Watson Bourne, second in the Junior

they did. When climbing Snaefell on the fourth lap, Cyril Williams passed him at a terrific pace, but that was the only occasion he saw the winner.

Handicapped by a human weight of 183 lb., his machine scaled 252 lb., the engine measuring 71×88 mm. = 348 c.c. Equipment included Thomson-Bennett magneto, Renold chain, John Bull belt, Avon tyres, and Amac carburetter.

"The Motor Cycle '' Trophy Winner.

One of the heroes of the Junior Race was R. O. Clark, of Norwich, who finished fourth. His Levis measures but 67×70 mm. = 247 c.c., and weighs only

R. O. Clark, the winner of *The Motor Cycle* Trophy for 250 c.c. machines. He finished

173 lb., i.e. 4 lb. lighter than its rider. Down the mountain, when leading the procession at a remarkable speed, his front tyre came off, pitching the rider forward violently. Fortunately, the regulation helmet saved him from serious injury, as the indentation will testify. Kicking the wheel reasonably straight and refitting the cover, he pluckily continued, after a delay of quite ten minutes. That thrilling finish with a 'flat front tyre and the wheel badly buckled will long be remembered. Poor Clark had to receive medical attention at the finish. To average 38.31 m.p.h. for 1883 miles on a machine under 250 c.c. is surely a record which will long remain. We are proud of the winner of The Motor Cycle Trophy.

JUNIOR T.T. TRIFLES.

The patriotic Manxmen—and Manxwomen—were heartbroken when Sheard walked into Ramsey on his first lap. But they talked confidently of how Duggie Brown would gobble up the Senior entry on Thursday. He very nearly did.

Prescott's A.J.S. lacked the zip of the new o.h.v. engine. He had to footslog above the Gooseneck on his first lap, and took a long cooler below the hairpin on his third lap, seizing the chance to enjoy a cigarette and a few tablets of "Velma."

N. F. Harris must be starred by the tipsters for the 1921 race. He is a class rider, and was formidable until the Ramsey hairpin on his third lap, when his usual thunderous acceleration was vox et praterea nihil. He stopped his engine, verified the fact that he had a freewheel on all four gears, and accepted his misfortune like a sportsman. Not even one little —.

T.-B. magnetos, Avon tyres, and Amac carburetters were used on the first, second, and third to finish.

Kuhn was delayed by his carburetter coming adrift, which accounts for his falling off in lap position. In the first lap he was fifth, and in the second twelfth.

"The Aviary" was the name bestowed upon the replenishing cages by one wag.

PUNCTURE-PROOF TUBES.

Sir,-I have possessed a pair of puncture-proof tubes for some time, and they are in use every day of the week. Their and I have not had cause to use a pump once. I have extracted several nails out of the hack tyre, but still it is as tight as ever. I do not know why more motor cyclists, etc., do not invest in these tubes, as they are well worth the outlay.

They seem too good to be true (I thought that at first), but after paying a visit to the works of the Puncture-proofed Tubes, Ltd., I found out that they were "the goods"! I may state that I have no interest whatever in this company.

D. PRICE-JONES.

DUST RAISING.

Sir,-I recently overtook many outfits, in the sidesn; —I recently overcook many outlis, in the stuce cars of which ladies were seated. I might have opened out and gone ahead. I did not do so; I was out for a comfortable, easy ride. The result was they must have been smothered with dust. I ask your readers, was the obligation upon me to open out, or upon the driver of the sidecar to slow down and let the dust settle? The issue is this: After overtaking-particularly ladies-should a speed he maintained to allow dust to settle, or is a rider justified in simply keeping ahead, the pace being determined by the overtaken?

Blackwood.

TYRE CREEPING.

Sir,—I can fully sympathise with "Ixion" re tyre creep. I have a 1920 outfit, and after two months I had a puncture in the back tyre. Taking the cover off to locate ti, you may imagine my feelings when I saw the valve, as "Ixion" puts it, "all cockeye." Further, I found I could replace the cover with my fingers without the aid of levers. Twice in one day did I have my valve ripped away, so on the next day I changed front and hack tyres. The new one on the back rim was really hard work to get on—an excellent fit. After three hundred miles another puncture in the back tyre revealed that the cover was getting distinctly looser. I wonder if "Ixion" would tell me if three security holts would remedy this.

LESLIE EVELEIGH.

ROAD REPAIRS.

Sir,—Doubtless all motor cyclists will agree that the roads in this country are in a terrihly bad state of disrepair. It is my "pleasure" to ride over a large area of the country, and therefore I am able to compare one district with another. However, it is difficult to say where one gets the worst bouncing. Fortunately, I ride a well-known British spring frame combination, but I sympathise with the rigid frame owner. Having had experience of road work, it has been my hobby lately to draw up comparisons of the it has been my nonny lately to draw up comparisons of the methods adopted to put the roads in order. There are two methods which, to my mind, are of only a temporary nature, and very expensive in the long run. These are tar-spraying and patching. In the former merely a crust is formed on the road surface, which eventually becomes powdered up: in the latter a good deal of valuable time powdered up; in the latter a good deal of valuable time and material is used in an endeavour to patch up a worn out road. If a road surface hecomes "pot holey" it is promptly patched up, and in nine cases out of ten just as

rough as before, except that the motorist gets a "bump up" instead of a "bump down." Patching is of very little use, as the mere fact of the road becoming full of holes in the first place goes to prove that the surface is becoming rotten, and will in time go in new places. This means that the workers employed in the repairs are constantly moving about the country looking for had places in the roads, and so much money is lost in what one might call "walking time." There must be a good deal of money for road work somewhere-therefore, why not use it in repairing the roads in a standardised way.

There should not be any great difficulty in compiling a scheme. Take the main roads as a beginning and divide them up into sections, and repair these sections all at one time. The work would be done quickly, and the roads would then make a more or less fresh start in a new condition all together. It will cost a large amount of money, but will be the cheapest in the long run. G.H.W.

Grantham.

TWO-STROKES AND SIDECARS.

Sir,—There is a prevailing opinion among those private motor cycle owners who have never tried one that a 23 h.p. two-stroke motor cycle is not powerful enough to pull a sidecar with an adult passenger.

I recently bought a 23 h.p. Alldays-Allon, and I attached a cance sidecar to steady the machine on the grease, as I had to ride to husiness daily—a matter of fourteen miles. To my surprise, I found I had ample power to carry a 12 st. adult, which I have done very often; also, I could climb a gradient in 6 on top gear, provided I had a good start, and travel on the roads in London at 20 to 25 m.p.h. My weight is 13 st. 12 lh., and with the roads as bad as they are in London at the present time I think this is a remarkable performance, because the machine is only a toy, as far as size is concerned, though it is built very strongly. Personally, I think it is the most perfect little machine of its class on the market.

C. W. G. BONE. The usual disclaimer.

FRONT BRAKES.

Sir,—I read with some surprise a letter in your issue of the 6th inst., signed "Lam Alif," in which he stigmatises the front rim brake as "ridiculous and useless, and a relic of the pedal rith make as 'Interious and access, and a rent of the peace cycle." Why should a fitting be assailed on the grounds of its being a relic of the pedal cycle? Two wheels, pneumatic tyres, a diamond frame, handle-bars, and chain drive are all relics of the pedal cycle, yet no one calls them "ridiculous and useless." The front rim brake, like those other commodities I mentioned, has been adapted to motor cycle needs, and works well. It has only two drawbacks-(1) it ruins the appearance of the front rim; (2) it means undoing two extra nuts when removing the wheel. But it needs no attention beyond an occasional drop of oil, and is extremely efficient.

I have used my 4 h.p. Douglas outfit up and down practically all the worst hills on Exmoor, including Porlock,
Lyuton, Countishury, and Parracombe, and found the rim
brake simply invaluable; it held almost as well as the back.
In any case, the front brake is necessarily an emergency
brake, and should be used for emergencies. The chief braking
strate should fell out the back when strain should fall on the back wheel.

Cambridge.

THE JUNIOR T.T.

Sir,-Although every motor cyclist must admire the bluck and ability of Cyril Williams in winning the Junior T.T. on a broken down machine, there are some who will wonder whether it is quite fair that he should be awarded the trophy. Comparisons are permitted in a case like this, and one must admit that on the point of reliability the Blackburnes won; but the T.T. is a race, not won on points, but on speed, and if the rider can get so far ahead that he can walk the last mile or so, and still beat the times of the

others, then undoubtedly he wins the race.

It was distinctly hard luck for the A.J.S. machines to develop troubles on the day of the race when such good perdevelop troubles on the day of the race when such good perdevelop troubles on the day of the race when such good perdevelop troubles on the day of the race when such good perdevelop troubles on the day of the race when such good perdevelop troubles on the day of the race when such good perdevelop troubles on the day of the race when such good perdevelop troubles on the day of the race when such good perdevelop troubles on the day of the race when such good perdevelop troubles on the day of the race.

Handsworth.

VARIABLE JET CARBURETTER.

Sir.—I see, in your issue of May 6th, a letter by "C.B. M.B.," regarding the B.S.A. carburetter. My brother and I have ridden a 44 h.p. B.S.A. for quite a long time, and have found that best results, regarding petrol consumption, are obtained by running on a three-quarter turn from the complete closed-down position when on level roads, opening on when hills are reached, or when a passenger is to be carried. The only source of anxiety is that the variable jet might turn down of its own accord, which is easily obviated by seeing that the catch fits tightly against the notches.

The only oil suitable for the B.S.A. gear box is the B.S.A. gear oil. Neither sticking nor slipping is then ex-

perienced.

We are now getting 95 m.p.g. from the 41 h.p. model. B.S.A. ENTHUSIAST. Sheffield.

FOUR-CYLINDER ENGINES AND ACCESSIBILITY.

Sir,—In a recent issue, your contributor, "Ixion," made some remarks as to the four-cylinder machine being inaccessible, which appears to show that he has not studied the type so deeply as the more conventional ones, about which he writes with such ability. For his benefit, and others who are interested, I should like to give some personal experiences of the case with which a modern fourcylinder machine can be dismantled; selecting as an example the 7-9 h.p. F.N.

On one occasion the big ends of the writer's engine ran out, through his own negligence in attending to lubrication. A complete new set of bearings was fitted without removing the engine from the frame, by simply taking the bottom half off the crank case and working from underneath.

This was done without disturbing the magneto or timing gears. The only other parts requiring to be removed were the footboards and supports, involving the removal of four nuts and two pins connecting the clutch and brake. Would the owner of any other machine but a Scott like to attempt a similar feat?

The transmission appears a mystery to many, though really it is surprisingly simple. The back wheel can be removed as quickly as that of any chain-driven machine without chain cases, and the bevel adjustment is not altered. Of course, this does not apply to makes fitted with quick detachable wheels, which could very easily be applied to a bevel drive.

The gear box, complete with universal joint and cardan-shaft, can be dropped out by uncoupling the clutch and change speed rods, slipping the sleeve off the rear universal joint and then undoing the two supporting bolts, about fifteen minutes' work, and the clutch then comes to pieces by unscrewing six nuts around the flywheel.

If it is necessary to take the engine out of the frame, it can be done by removing the footboards, inlet and exhaust pipes, and taking out the four bolts through the bearers, along which it can be slid to come off the clutch coupling, and then lowered at leisure.

No special tools are required anywhere on the machine, set of engineer's standard spanners and a screwdriver

being all that is needed.

While there is no doubt that the earlier four-cylinder machines were very tricky machines to handle, the same cannot be said of modern examples which should be absurdly simple to any man who can manage an 8 h.p. twin, and it is surprising that very few of them have progressed to a type which offers so many advantages in the way of power and speed, combined with great flexibility and really economical running.

ERIC CAUDWELL:

BALKAN D.R.'s.

Sir,-Apropos of the recent letters on the subject of a D.R.'s reunion, it will doubtless be interesting to know that this has to a certain extent been anticipated by the Balkan D.R.'s, whose first rennion dinner was held at the Restaurant Torino, Oxford Street, on Saturday, June 12th. It has been decided to hold this event twice yearly, and

to ensure success the attendance and co-operation of all Balkan despatch riders (whenever possible) is requested by

the promoters of the first rennion.

If all D.R.'s who saw service with S.A.R., M.C.O., Q.C.O., and the 27th, 28th, 22nd, and 26th Divisions, and also Hqrs., H.A., Vergetor, will communicate with Mr. Owen Feltham, of High Street, Ponders End, he will be glad to let them know what has been arranged.

An announcement of the second reunion will be made in due course, when it is hoped that a large representative gathering will be present.

G. HAROLD BURSTON.

CYCLES FOR THE MAIMED Several motor-assisted tricycles and one electrically propelled four-wheeler on monocar lines were seen in Regent's Park at the rally of cycles for war-maimed men, which was organised by The Motor Cycle and Cycle Trader.

M.P.G. AND UPKEEP OF SIDECAR MACHINE.

Sir,-In compliance with your comments on my recent letter dealing with tyre mileage, I append the other data mentioned. With these figures it should be possible for any interested reader to draw up for himself an estimate of running costs, and form an idea of the general service likely to be obtained. All figures are given as actually recorded.

SEASONS 1912, 1913, AND 1914.

31 H.P. B.S.A. (Single Speed) Fitted with "Aldion" Clutch Pulley and Wicker Sidecar. Gear Ratio 51 to 1 (approx.). Belts:

(a) Three Lim. rubber belts, not satisfactory owing to small engine pulley and because duties. Miles 2.617.

heavy duties. Miles, 2,617.

Jin. "Service" leather belt, scrapped when worn far enough to cause slip at belt rim. (The engine pulley was closed in as required.) Miles,

Belt Fasteners

(a) For rubber belts. No record kept,
(b) For "Service," 6 broken, average life 947 miles.

1912, 35 galls. pctrol. Mileage, 2,411 (60 m.p.g.), 1913, 521 ,, ,, 1914, 341 ,, ,, 3,574 (68 m.p.g.). 2,416 (70 m.p.g.).

Engine Oil (chiefly Prices' "A").

4. galls. Mileage, 8,401 (1,860 m.p.g.).

Replacements.

(a) Hodd amp bracket broke (due to vibration) at 3,355 miles.

(b) Clust pulley flanges renewed at 3,702 miles; and again after another 3,998 miles.

3,998 miles.

(These were badly worn, due to abrasive action of leather belt.)

(e) Bowden wire (throttle) gave out at 7,803 miles.

(d) Top piston ring and valve springs replaced (probably not necessary) at 7,009 miles.

Total cost of replacements (pre-war), £1 28. 6d.

Involuntary Stops (other than tyre or belt):

Two (chocked jet and short circuit respectively).

SEASON 1919.

44 H.P. B.S.A., THREE-SPEED, CHAIN-GUM-BELT, AND MILLEORD "SKIFF" SIDECAR. GEAR RATIO 5 TO I (APPROX.). Belt:

rin, Dunlop rubber, about half worn (as far as can be judged) at 3,645 miles.

(The advantage of the large pulley on the countershaft is very apparent.) (1ne advantage of the large pulley on the counter Belt Fasteners: Various makes, 4 broken. Average life, 739 miles. Fuel (petrol, 41 galls.; henzole, 13 galls.): 54 gallons. Mileage, 3,645 (67] m.p.g.). Oil:

(a) Engine (chiefly "Vacuum T.T.")-21 gallons. Mileage, 3,645 (1,620

(a) Lingme (enter) Vacuum 1.7. / - c services (a) (b) Gear box ("Clyde A" and ordinary machinery oi!, equal parts)—r; gallons. Mileage, 3,645 (3,250 m.p.g.).
(a) Top spring for front fork broke at 1,514 miles. (Road conditions certainly to blame.)
(b) Lubricator hand-plunger spring broke twice within the first 1,000 miles. (Replaced free of charge).
Total cost of replacements (post-war), 1/6.

Involuntary Stops (other than tyre or helt):

Four (once due to fork spring above, and three times due to stuck magneto

rocker). rocker). NOTES.—(a) In all cases the fuel recorded is the nominal amount purchased (not of necessity nett amount entering tank), and includes losses due to evaporation and filling, also a certain quantity used for sundry purposes, such as cleaning parts.

as cleaning parts.

(b) I cannot speak too highly of the services rendered by these two machines.

The B.S.A. may not be the fastest on the road, but, for the man who waits to "get there," it would be difficult to find a better. In short, I think had he fairest reticted in the rendered by the state of the rendered by the rendered by

JAMES WATT, M.I.A.E.

CHAIN ALIGNMENT ON SCOTTS.

Sir,-In reply to Mr. F. D. Martin's letter in The Motor Cycle of June 3rd concerning the Scott machine, perhaps the following may be of interest to him and other Scott owners.

To ahign the primary chains, remove the gear pedal, and take measurements from the crank case strap bolts. job can be done in ten minutes. I have ridden a Scott since December last in all weathers, during which time I have never had the slightest trouble with any of the chains. II lubricate them about every 100 miles with engine oil, and use two high gear chains, which I change about, approximately every 2.000 miles.

Before removing the old chain, the new one should be attached to the end of the old one, or considerable difficulty may be experienced in passing it over the engine sprocket.

I do not agree with Mr. Martin that Scott chains are too light. Owing to the even torque of the engine, there is less strain on the chains than in the case of a four-stroke, and the silence and smooth running of in. pitch chains

compared with heavier ones is very marked.

I have ridden a great many motor cycles, and have yet to find one that, for real confort and staying power, can touch the Scott, and, moreover, with a very little timing, such as smoothing out the exhaust passages and piston, this machine will be found to possess a remarkable turn of speed.

purposely refrain from giving figures. In conclusion, a word of appreciation for Messrs, Godfrey's, Lid., who are London agents for the Scott, and from whom I have at all times received very willing help and really remarkable courtesy. I have no connection with any firm, J. McCLIVE. either in the motor trade or out of it.

TWO-STROKES.

Sir,—"Ixion" remarks on the prevalence of baby two-strokes, and has seemingly meditated and wondered concerning this same. The reason, I think, is that they are a sound proposition. Cheap (as things go nowadays), re-liable, and practically foolproof, my own experience may be of interest. I am a pre-war motor cyclist, and have possessed various machines, from a 1½ h.p. front drive Werner to a modern T.T. solo machine of a leading make, which I disposed of during the war.

During a spell of hospital in 1918 I became possessed of a two-stroke with a Villions enging. The cutter was

of a two-stroke with a Villiers engine. The outfit was assembled by a firm called the Monopole Cycle Company, of Coventry. The Villiers engine was vaguely familiar. When I bought it, I confess I regarded the whole concern as a huge joke. But when I began to ride it my opinions very soon changed. The machine has a fixed pulley, but it is flexible to the last degree. It never falls on any ordinary road hill, nor on a great many extraordinary ones. It has its limits, of course, but it pulled me from Buckinghamshire to Cornwall during Christmas, 1919. (London to Exeter competitors will remember the weather) and back again, and did not fail on any hill. I rodo via Okehampton, Launceston, and Bodmin. I use it perpetually here in Edinburgh, and three weeks ago I ran from here to Cromer and back during a week-end. My repair bill so far has been 25s, for an overhaul job, which I was too lazy to do myself. I can honestly say that I have had more fun for less trouble out of this little machine than out of any of my others, always excepting the 1\frac{1}{2} h.p. Werner. But some people would hardly call that fun. Ye gods! what days they were. I need hardly add the usual disclaimer. FOURTEEN STONE. Edinburgh.

SUMMARY OF CORRESPONDENCE.

TAXATION.—R. Green, of Barking, suggests a four months' and an eight months' licence as a fair means to provide for those motor cyclists who are not in the habit of riding all the year round.

COURTEOUS TREATMENT,-H. C. Newman, of Windsor, commends Grado, Ltd., for prompt and free replacement of parts. "Eldon," Scarborough, mentions Zenith Motors, Ltd., in similar terms of praise.

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with The Motor Cycle. net, post 2/10 "HINTS AND TIPS FOR MOTOR CYCLISTS."

Wales, Scotland, and the London District. New
Edition. Just published 5/4 Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 20, Tudor Street, Loodon, E.C.4, or of leading Booksellers and Railway Bookstalls. MOTOR (YCLE

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d, stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the left-hand corner of envelope, and should be kept distinct from questions bearing on technical subjects.

Fitting Handle Starter.

I am using a 2½ h.p. Diamond-Jap, fitted with Enfield gear, and I wish to fit a handle starter. I thought of riveting a chain sprocket on to the bottom gear countershaft sprocket, but find there is insufficient room. (1.) What alteration

would be necessary to do this? (2.) If this is not possible, can you suggest an alternative?—L.S.

(1.) We do not think that you can alter the lightweight Enfield gear in such a way as to fit a handle starter. (2.) It would be very difficult to fit any satisfactory starting arrangement to a machine of this type.

Uneven Lubrication of Scott.

My Scott gets decidedly more oil into the left-hand crank case than into the other. What is the best way of getting the lubrication of the two equal?—W.H.

Presumably, your machine is not fitted with the latest pattern lubricator, with separate regulator to each crank case. We should strongly advise you to have one of these fitted, as they are a great convenience. If you wish to adjust your present system, however, you might remove the oil pipes and restrict the aperture in the unions which screw into the crank case on the side suffering from over lubrication.

Duration of Accumulator Lighting.

At present I am using a 6 volt 52 c.p. half-watt head lamp and two 5-5 volt miniature screw (pocket lamp) bulbs (in series) on my 6 volts 60 amp. accumulator. Kindly tell me how long would

the battery last (an efficient light) if I used a 50 c.p. half-watt 6 volt lamp and the same side and tail lights? Please give me a formula for working it out.—R.C.

In actual practice the alteration you suggest would decrease the duration of efficient light from the accumulator by about four or five hours—that is to say, you should get from seven to eight hours running from a full charge. In order to calculate the duration obtained, the following formula is applied when small half-watt bulbs are used:

Watts = c.p. x two-thirds (about).

 $Amps = \frac{watts}{battery\ volts.}$

Add the amps. for each circuit, then

duration of light = $\frac{\text{amp.-hours}}{\text{amp.}}$

A Damaged Timing Gear.

I have a 2½ h.p. four-stroke engine, perienced great difficulty in starting up, due (apparently) to too much compression. This trouble, curiously enough, has only started since I had what I thought to be a seizure, but which turned out to be the spindle of the cam levers working loose and catching in the flywheel. This I have put right, but still have the back wheel skidding on each com-pression stroke. I turned the engine over to-day, after having taken off the timing cover, and was very surprised to see No. 1 timing wheel blown out of its socket. (1.) Would this point to too much compression in the crank case, as I found that the engine revolved quite normally when timing wheel was out? (2.) Do you think that the valve situated behind the timing wheel is clogged up, preventing the air from escaping from the crank case ?-J.H.P.

(1.) It is quite unlikely that crank case compression would be so great as to skid the back wheel. (2.) In all probability, the timing wheel shaft was bent when the rocker spindle worked loose and fouled the tlywheel, and we think that the resistance is due to the resultant binding of the wheels, rather than to any excess of compression.

Choice of Machine.

I am writing to ask if you will give me some advice on purchasing a new motor cycle. I think I read once, in The Motor Cycle, that a big single was as economical to run in the way of tyres, petrol, and repairs as a two-stroke. (I.) Is this so? (2.) I have found that a light four-stroke is not very successful as regards reliability over the Devonshire roads. Would the same apply to a two-stroke? (3.) Do you think that a good two-stroke will prove reliable and economical to run over reliable and

(1.) We do not remember any statement to the effect that a big single was as economical to run as a small two-stroke, (2.) A light machine, either four-stroke or two-stroke, should be satisfactory if a model of first class manufacture is selected in the first instance. (3.) Such a machine would no doubt prove quite reliable and economical, but in your district it would be almost essential that a two-speed gear be fitted. (4.) One thousand miles is certainly not the limit of life of a machine of this class.

A TRICKY HAIRPIN. The Sheffield and Hallamshire M.C.C. found a bad left-hand hairpin to worry the sidecarists in the recent trial for the Wilkin and Thompson Trophies. Reynolds (4 h.p. Norton sc.), who gained the Thompson Cup and two special prizes.

Gimes to Light Lamps.

,,	30th	•••	•••	9.48	,,

The 1920 T.T.

A triumph for the British "single."

Wonderful!

That a liftle 250 c.c. two-stroke could average 38.31 m.p.h. for practically six hours in a T.T. race is truly wonderful.

In the 1914 T.T. the best performance by a two-stroke under 250 c.c. was an average over the course of 30.6 m.p.h. Clark's speed was 7.7 m.p.h. faster.

The Topic of the Moment.

. Last week the T.T. was the topic of the moment, and on tram, 'bus, or train, in cates, restaurants, and theatres, one could hear the race discussed.

The Club Championship.

The M.C.C. team trial for The Motor Cycle Challenge Cup starts from Tring at 1 p.m. on Saturday. Particulars of the teams competing will be found on page 727.

Joint Speed Trials.

Entries close on Saturday next for the joint speed trials organised by the Essex M.C. and Southend and District A.C. for July 15th. The organising secretary is Ernest J. Bass, 40, Chancery Lane, W.C.2.

The 8 h.p. Clyno.

There are quite a number of 8 h.p. Jap-Clynos on the road which saw service during the war, and this is causing a certain amount of confusion on the part of the public, who mistake them for the new 8 h.p. Clyno, which has not vet been sold to the public. We understand, however, that its appearance on the market will not be delayed much longer.

The A.C.U. Royal Patron.

H.R.H. Prince Albert, patron of the A.C.U., could not go to the Isle of Man

owing to other engagements. Through his equerry, the Prince signified his interest in the T.T.

The Auto-Cycle Union, through its secretary, Mr. T. W. Loughborough, last week offered H.R.H. Prince Albert, as patern of the Line. as patron of the Union, a silver A.C.U. badge for attachment to his motor cycle. Replying to the Union, the Prince's equerry, said that His Royal Highness was very pleased to accept the A.C.U. badge, which would be affixed to his

Police Activity.

The police are very active at present Carmarthen borough. Traps are in Carmarthen borough, Traps are working in four different entrances to the town.

Noise.

The A.A. has reminded drivers of cars that as a matter of courtesy, warning should also be given of their intention to pass motor cyclists. It is pleaded that owing to the noise made by their machines, motor cyclists cannot always because the control of the cont hear vehicles coming up behind them. Yet there are some who affirm that the noise of a motor cycle is in a sense a protection against accident.

The East Lancashire M.C.C. Open Hill-climb.

The Open Hill-climb to be held by the East Lancashire M.C.C. on Satur-day, July 3rd, is one of the twenty open competitions sanctioned by the Auto-Cycle Union, Special classes have been instituted for amateur riders. There will be classes for scooters, solo machines from 275 c.c. to the unlimited class, while the events will be alternately for members and open up to Class 10. The remaining classes for unlimited solo machines, 500 and 600 c.c. sidecar machines, passenger machines unlimited

machines, passenger machines unlimited and three-wheeled cycle cars, and light cars up to 1,500 c.c., will be open. Entries close, first post, Saturday morning next. Full particulars can be obtained from the hon. secretary, W. D. Guest, 9. Exchange Street, Black-

Special Features.

THE T.T. RACES DESCRIBED. TWENTY YEARS OF LIGHTWEIGHTS,

A Mystery German Motor Cycle.

Who was the rider of an apparent post-war N.S.U. seen on the Maidstone Road last week? It was a new model twin, with gear box and dynamo lighting.

Tool-bag Found.

Mr. John East, of 26, Palace Street, Buckingham Gate, S.W., on the 15th, picked up an Indian tool kit on the Putney-Kingston road.

A Motor Cyclists' Paradise.

The Isle of Man is the ideal place for a motor cycling holiday. Good scenery, splendid roads, and no irritating restrictions. When the Isle of Man Steam Packet Co. realise that there is great room for improvement in the manner of handling motor cycles for the cross-channel trips, then will they and Manx people generally reap full reward.

A Speed Limit Avoided.

A proposal to apply for the imposition A proposal to apply for the imposition of a speed limit through the village of Witney, Oxfordshire, has been abandoucd, following negotiations between the Automobile Association and the local authorities. The latter agreed to refrain from lodging an application upon the understanding that the Association would request motorists to drive carefully through the village.

J. A. Watson-Bourne (Blackburne), second in the Junior T.T., at Craig-na-Baa.

Speed and Reckless Driving.

A motor cyclist charged with reckless driving was dismissed by the magistrate, as it was argued that even 50 m.p.h. was not reckless driving if the driver had complete control of his machine.

The Home of Champions.

Herefordshire has need to be proud of its sons. T. C. de la Hay, this year's Senior winner, Eric Williams, the 1914 Junior winner, and Reg. Brown, third in last week's Senior event, all hail from that county.

Exit Grove Park.

Grove Park M.T. workshops and depots have closed down. The remaining staff and mechanics have been transferred to the Kidbrook (Lee) depot. All that can now be seen of the famous camps is the remains of a hut and a few battered petrol cans.

Cold Store for Motor Dump.

The latest motor dump is at the Deptford Cattle Market, a Government depot since the war. One of the largest cold stores is now being packed with M.T. goods, including magnetos. parts and fittings, tyres, oils, grease, etc. Consignments are arriving by river, and it is said are mostly new and unused.

A Manx Function.

On the evening of Wednesday, June 16th, the members of the press and A.C.U. Officials in the Isle of Man in connection with the T.T. were entertained at dinner, at Collinson's Caté, Duke Street, by the Mayor and Corporation of Douglas. Among the Manx notabilities present were the Lieutenant Governor, the Speaker of the House of Keys, the High Bailiff, and the Mayor of Douglas. Interesting references were made to the earlier history of the T.T., and the statement was put forward that the first motor cycle race ever held took splace over a three-mile course in the vicinity of Douglas, before the A.C.U. became officially concerned with motor cycle racing in the Island.

F. W. Applebee (Levis), aged fifty-eight years, the oldest competitor in the Junior T.T. race. He receives the Nesbit award for the most plucky performance.

Congratulations and Thanks.

The officials of the A.J.S. firm ask us to convey thanks to the large number of enthusiasts who have sent their congratulations on their win in the Junior T.T. These have been so numerous that it has been found impossible to write each individually.

The T.T. Winner.

T. C. de la Hay is down to compete in the M.C.C. Team Trials on Saturday. He is a member of the team nominated by the Worcester and District M.C.C.

Taxation.

Between twenty and thirty Members of Parliament have already given in their names as supporters of the amendments to the Finance Bill which have been adopted by the Motor Legislation Committee. A flat rate duty in petrol is advocated.

Brooklands.

On Saturday next the British Motor—Cycle Racing Club programme will include two 100 mile races for Junior and Senior T.T. types of machines, an all-comers handicap. The first open—B.M.C.R.C. meeting is fixed for Saturday, July 10th.

The International Six Days.

Seventeen entries have been received for the International Six Days Trial in France, July 26th-August 1st. These include A.B.C. (4), Rudge Multi (2), Triumph (2), Scott (3), and Indian, Zenith, Motosacoche, Gillet, Condor and Morgan (1 each).

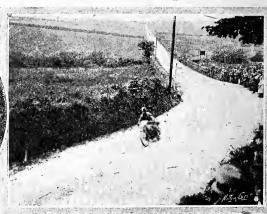

Pillion Penalties.

We are informed that in future when motor cyclists are summoned for having their number plates obscured by any part of a pillion rider's dress, the passenger will also be summoned for aiding and abetting the offence. This edict is, attributed to the superintendent of the Doicaster and West Riding Constabulary.

Northern Sale of Army Motor Cycles.

A sale of Government motor vehicles by Messis. Cooper at Newcastle on June 17th realised £9,000. Douglas motor cycles realised from 33 guineas to 47 guineas, and with sidecars from 47 guineas, to 73 guineas. Trimmphs sold for 37 guineas to 80 guineas, and with sidecars from 40 guineas to 71 guineas.

FLAT AND V TWINS IN THE JUNIOR RACE.

N. W. Loughton (Douglas) and Eric Longden (Dot-Jap) both rode consistently throughout the race. Hilberry Corner is seen in the right-hand picture,

MANY RECORDS BROKEN.

A Keen and Exciting Race followed enthusiastically by a Huge Concourse.

ANOTHER SINGLE-CYLINDER SUCCESS.

The Winner, T. C. de la Hay, riding a Three-speed Chain-driven Sunbeam, averages 51.79 m.p.h.

DURING Wednesday the course dried out into beautiful condition, but heavy rainstorms fell during the night, and Thursday morning broke dull and threatening. It was felt that the race was exceptionally open. Dance and de la Hay lad shown in practice that they might be invincible as regards pure speed, but they were half expected to set such a cracking pace that they would chase each other off the Island, and if they fell out, few cared to choose between a dozen rivals. The Manxmen, of course, refused to consider any possible winner but, D. M. Brown. J. W. Shaw was known to be fast, and many good judges fancied that the Indians had something up their sleeve. The 'sky was clearing as an immense crowd assembled in Glencutchery Road, and there was every promise of a dry day, though nobody dreamt that a scorching sun would harden all the open parts of the course within a Jap or so.

Impressions of the Start.

Of the twenty-nine riders on the programme, twenty-seven answered the starter's call. Moffat (No. 73) had damaged his machine in practice and was mable to procure another. Redmond (No. 77) had also withdrawn in the preliminary stages. The remainder filed out of the storage tent in their starting order, glad to escape from the noisome tumes with which the final warming up had laden the atmosphere. Vivian Olsson, imperturbable as ever, could not be bustled by the fussiest marshals. Well before 9.30 a.m. the twenty-seven were parked with military precision, as in the Junior event, within white oblongs chalked on the road behind the "start" banner. How the last to start must have envied A. H. Alexander (Douglas), who

had drawn the first place in the ballot, and so got away after a very brief wait with his engine still warm from the tent.

A WELL-PLEASED TRIO.
The Senior winner, T. C. de la Hay, with the designer of the winning Sunbaun, J. E. Greenwood, and A. S. Bowers, managing-director of John Marston, Ltd.

The get-aways were spoilt in several instances by the sulkiness of cold engines. Several men changed up too soon, but the cleverer jockeys warmed up their induction systems by a longer burst on second gear. Some cut out for the corner at the top of Bray Hill, whilst others merely reduced the throttle opening, so getting the engine warm as fast as possible. A. H. Alexander led off well on his six-speed Douglas, and a minute later the favourite, Dance, tore after him. Eric Williams perhaps got off better than anybody else, and had to lie well over to swing on to Bray Hill. D. M. Brown got a big cheer from the natives, though got a big cheer from the natives, be had to run quite a little way before his Norton fired. Howard Davies on the 350 c.c. A.J.S. lost nothing by compared to the bigger fellows. The A.B.C. pair put up a thunderous acceleration, but did not seem specially fast. A number of the entrants wobbled perceptibly as they worked up through their gears.

Mile a Minute Speeds.

Long before the field had departed it was clear that the pace was going to be a real cracker. The progress board below the timekeeper's box recorded the arrival of each man at Ballacraine, Kirkmichael, Ramsey, and Craig-na-Baa. Fifteen minutes after, A. H. Alexander had started he was posted as having passed Kirkmichael (fourteen miles away), and Dance's number went up on the same line a few seconds later. The sum was getting hotter every minute, but the grease in Glen Helen was bound to survive for a couple of hours yet, and nearly 60 m.p.h. along tortuous lanes, full of corners, dry in patches, and tree-shadowed elsewhere, spelt terrible risks. But the men kept it up till the mountain

The Senior T.T. Race.

slowed them a trifle. For example, Alexander's Douglas did the twenty-four miles to Ramsey in approximately 25m., and reached Craig-ua-Baa-341m. from the start-in 37m. The progress board makes the official enclosure by far the best coign of vantage, for its reports beguile the long waits when all the leaders are away on the far side of the Island in the middle of their laps. Lucas's A.B.C. created a sensation by catching three men between the start and Ballacraine, only to retire at Ramsey with a broken valve-the first an A.B.C. engine has ever broken.

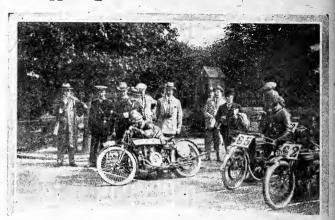

A Record Lap.

By 10 a.m. all the entry had left, and for ten minutes or so there was nothing to do but watch the leaders' numbers being hoisted in quick succession on the lower racks of the progress board. The warnnoisted in quick succession on the lover racks of the progress board. The warn-ing whistle sounded at about 10.12. "Alexander!" we shouted; but, as we craned our necks, Dance burtled through, sitting well down to it, and screaming past like a projectile. His marvellous laptime was 41m. 28s.—48s. faster than the 1914 record-nearly 55 m.p.h., done from a standing start over a greasy course, estimated to be a full minute longer than the old route.

A. H. Alexander shot through in 43m. 52s., having been passed by Dance on the Z bend at Governor's Bridge, where his belt fastener broke. He told ns later that the engine was "altogether too purple" for the belt fasteners, of which he used up four in three laps.

Road Conditions.

The men were heavily mud-splashed. and their machine numbers were difficult to read. The third starter, Victor Horsman, had barely passed before the inevitable dog did a mimic flying kilometre right along the stands. Luckily, the frightened mongrel was collared just before Harveyson shot through. Harold Petty was hotly pursued by Eric Williams. who was only a few seconds faster on his Sunbeam than his best lap on the A.J.S. in the Junior. Then de la Hay, Sclater. Townsheud, and Walker fled past in a bunch, but nobedy approached Dance's Howard Davies did 44m. 57s. on his A.J.S., as compared with 46m. 2s. in

FIRST MAN OFF! A. H. Alexander (Douglas) made a fine start, and was round again in 43 min. 52 secs., which included a stop.

The big crowd was thoroughly enjoying the spectacle, for the machines were doing perhaps 70 m.p.h., and bouncing through sheer speed on the almost imperceptible wayes of the road surface, whilst a nasty bump at Bray Hill corner flung some of them a foot off their saddles.

The sensation of lap one was Dance's phenomenal speed, whilst patriots were perhaps a little relieved that the Indians did not seem too formidable,

The following dozen headed the field after one lan:

POSITIONS AT END OF FIRST LAP

ABC

Second Lap. Could Dance last long at such a pace? was the burning question as the field completed lap I, and the crowd grew tremulous with excitement as he reappeared astonishingly early, unfastening his filler caps as he slowed down for his depot stop and wobbling a little with the one-handed steering. He was off again in twe ty-five seconds or so, and miraculous lap time of 40m, 43s, went up on the board-nearly 56 m.p.h.! The mud which the boy scouts were mopping off the number plates as the men stopped bore witness to the state of the roads, but the sun was more positively fierce, and the roads were dry except where trees shaded them. A. H. Alexander did 41m. 23s. for his second lap, showing that the Douglas might still have to be reckoned with. Then came a minor sensation quite apart from the placing of the men. Everybody was stopping at the the men. Everybody was stopping at the cages for fuel and oil after two laps, and it was noticeable that the Indians dryskidded on the smooth tarred road when violently braked. None of them had

F. C. Townshend (Sunbeam) negotiating the corner at Quarter Bridge. Many and varied were the styles of cornering.

A fine speed impression of the winner, T. C. de la Hay (Sunbeam), at the Gooseneck, above Ramsey.

front wheel brakes, and when the back wheel was locked, they began to swing sideways and threatened to topple over. Several of them eased their brakes and were content to overshoot their depots, but F. W. Dixon crashed heavily some eight yards short of his cage and slid up to it on his shoulder. Luckily neither machine nor man was the worse-Harveyson and Douglas Alexander on sister machines narrowly averted similar spills, and on subsequent laps all the Indian riders decelerated far more cautiously.

When we were able to work out the position, it was seen that the Indians were forcing their way up, and that Eric Williams meant business. Notice how a clump of four Sunbeams were running, fourth, fifth, sixth and seventh, under a "handkerchief" no bigger than eighty-one seconds. If the meteoric Dance en-

countered disaster, this quartet would plainly take a lot of heating. But the islanders were all confident that Dance and Alexander would crack, and let Duggie Brown's Norton up to win; and as subsequent events showed, they were not so very far wrong.

at Crosby; leaving 24 out of 27 still racing.

Third Lap.

The third lap produced the first real change in the outlook, and, incidentally, bred acute anxiety in the press box at any rate. The progress board remained absolutely blank about A. H. Alexander after he left the depot for his third lap. George Dance—No. 65—was reported from every telephone box on the course in quick succession, the last being at Craig-na-Baa, three miles away. Then both men were lost in a mysterious silence, which continued for an hour or more. We were receiving prompt messages from the time-keepers box. via Secretary Loughborough's megaphone of any mishaps to other lost sheep, and slowly suspicion deepened that Dance, at any rate, and perhaps Alexander also, had been killed, and that the officials were anxious not to harrow our feelings by announcing the

Another remarkable speed photograph. Second to finish, D. M. Brown (Norton) going well up the mountain road

Eric Williams (Sunbeam) jumping Ballig Bridge. A jammed brake was responsible for a fall, through which he was compelled to retire.

tragedy hefore the race was over. We had to wait a very long time for more reassuring, if still disappointing, informa-tion. In the meantime Dance was calmly watching the race from a house top, unconscious of public anxiety on his behalf, and the crowd fell to reconsidering the race now that both the leaders had vanished into the unknown.

The sun was blistering, the course as a whole was now hone dry, and the machines which crackled up at somewhat lengthy intervals were now displaying clean numbers.

Lever attachment to the oil pump on Alexander's Indian Scout.

The Indians were remarkable for their ren running at this stage, though hardly fast enough to win. De la Hay was going great guns. Reports from observers posted along the course already marked him as more than dangerous. His corner work was described. work was described as magnificent, and his acceleration as superior to that of any rival. — Unless D. M. Brown had a little reserve speed still in hand, the experts considered that the Sunbeam would catch the Norton rider.

Eric Williams was a specially noticeable absentee in the course of this lap. His brake jammed as he slowed for Quarter

The A. J. S. special oil filler cap to facilitate replenishing.

Bridge-a misfortune which happened to one or two others in the race. As he could not steer round the corner, with extraordinary coolness he selected a soft spot to hit, and charged a wooden gate in preference to a stone wall. He escaped unhurt, but his Sunbeam was put quite hors de combat.

Trumpet exhaust pipes on R. Lucas's A.B.C. Short diagonal pipes relieve the back pressure in the bends.

Fourth Lap.

The first sensation of lap four was due to either a practical joke or a tem-porary aberration on the part of the telephone operator in charge of the progress board. He duly reported the leader, D. M. Brown, at Kirkmichael, but we waited and waited till the clock suggested that No. 56 must surely be down and out. Suddenly the Manx rider was placarded as passing Craig-na-Baa just as poor Horsman toured slowly in to retire at his cage, with a tinny noise inside his engine. Terrific cheering hailed the resurrection of Brown who replenised his tanks very coolly, waving to his relatives in the stand, and roaring off again without fuss or flurry. Quite

apart from Manx partialities, the crowd as a whole recognised that his Norton was stalling off a heavy challenge from the Sunbeam trio. In swift succession a bery of the faster men paused at the seges—Reg. Brown, Harveyson, D. Alexander, and de la Hay. True to the experts' forecasts, in mid-race de la Hay lad caught up a full minute on D. M. Brown in lap four, which was his fastest up-to-date. Close on one o'clock came the tardy news that Dance was at Craigna-Baa unburt-for nearly two hours we had feared the worst. His mlet valve

D. S. Alexander fitted a small windshield to the front number plate of his Indian Scout.

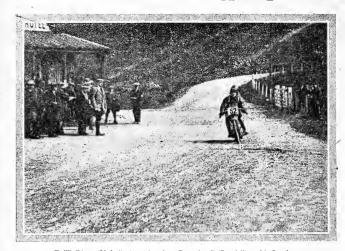

had broken at the cotter hole, and not

unnaturally his only spare was an exhaust with a stem of larger diameter.

The Duzmo did 47m. 53s. for the fourth lap—its best, and also its last. Of the slower men, Dr. Lindsay's amateur Norton team (Jack Thomas, Norman Black, and the doctor) aroused special interest. Lindsay was riding a machine which he uses daily in his profession, and Black's mount was belt-geared with a Philipson pulley. This trio had no high ambitions, but were out to finish the course.

Jack Thomas (Norton), who rode without goggles, cornering on the Gooseneck.

F. W. Dixon (32 Indian) passing the "Bungalow" (Snaefell) on his first lap.

The Indians, pursning their safety policy, were clearly ready to take advantage of any slip by the four hares in front of them.

I	2,	F. C. Nor	th (No	rton)				3	25.	55

The following dropped out during the fourth lap: No. 54, B. Houlding (Indian), tyre trouble at Union Mills; No. 64, H. Petty (Norton), dry-skid at Ramsey, danaged front fork; and No. 74, A. H. Alexander (Douglas), retired at depot, after three laps, with bett lastener trouble, after taking 11 hours for lap 3, leaving 16 out of 27 starters.

Fifth Lap.

At this stage things were rather quiet, our chief interest being concentrated upon the invisible duel which D. M. Brown and de la Hay were fighting out behind the screen of hills. It is ungracious to cavil at the progress board, which on the whole played the part of a kindly telescope for the crowd. But on lap five it inadvertently announced that de la Hay had caught Brown, though a seven-minute starting difference camouflaged the narrow gap which actually separated them. The announcement was corrected in time to prevent many Manxmen from expiring of heart failure : they breathed again when No. 56 was reported as leading at Craig-na-Baa. Meanwhile another lost sheep had been traced, and Simister-missing for two laps-was reported as touring in from Hillberry. Meanwhile Walker made a prolonged stop at his cage, and A. H. Alexander experienced just such another tardy resurrection as Dance's—a buzz of relief went through the crowd when the progress board suddenly hoisted No. 74 as having

passed Kirkmichael after two and a

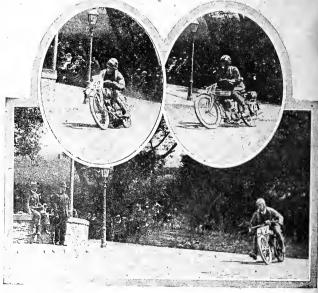

As the time drew on for Brown and de la Hay to flash past on concluding their penultimate laps, the tension became almost painful. Sympathy was torn both ways—everybody loves the Norton, a Manx winner is overdue, Brown has raced long and pluckily. On the other hand the Sunbeam is one of our premier

singles, the machine is most taking, and de la Hay a very popular fellow. Few of the visitors could decide whom they favoured, but the excitement was becoming positively unbearable. At last Brown thundered past, going magnificently; true, the lap time was slow, but it included a depot stoppage. Pulses trembled as we strained our eyes for de la Hay, and the seven-minute starting difference prolonged the agony. Reg.

Taping on handle-bar controls was general practice. The winner of the Junior event was delayed due to lack of this precaution.

Brown scrapped through meanwhile for all he was worth; Black came in on his heels and terrified the crowd by his violent braking for a depot stop. At last the board reported de la Hay at Craigna-Baa, and in an incredibly brief period the whistle, and a roaring speck far up the road heralded his approach. He came through like a demon faster than anybody had passed all day. The brushmen painted up the lap times. Hay-leads Brown by seven seconds; An "Oh" was audible, as the crowd drew breath. Havveyson and D. Alexander followed presently, both going uncommonly well;

The Senior Tourist Trophy Race .-

but the duel between the leaders consumed everybody's attention until the end. There was little to record during this final lap, which seemed interminable. A. H. Alexander came in to retire, muttering unuttcrable things about belts. Jack Thomas toured in gently to finish his fourth lap. J. W. Shaw went through almost as fast as de la Hay, but well behind on nett time. Dixon passed at no very great speed. Everybody was glancing from the progress hoard to the clock, and back from the clock to the board.

During the final lap the wires were being kept busy with anxious enquiries about one or two unreported men, and the progress board consequently was unable to keep the spectators in very close

The designers of the Sunbeam and Norton machines, Messrs. J. E. Greenwood and J. L. Norton.

touch with the terrific struggle between Brown and de la Hay. Everything looked black for the Manxman. If anything, he was slowing a trifle, and the irre-

ressible Sunbeam had been overhanling him slowly but surely during the last four laps, picking up precious time on each circuit. Still hope springs eternal in the Celtic breast, and most of those present know how untrustworthy those present know how untrustworthy machinery may be when it is highly stressed. Brown was due in at 2.5 by the big clock on the judge's box, if his last lap had taken 45 min., which was about the time we credited to him. At 2.5 the board amounced be was past Cruiters. Brown Thompson clock of the control Craig-na-Baa. The remorseless clock linger moved on to 2.6, 2.7—and at 2.8 the whistle blew, and a distant speck Craig-na-Baa. expanded into the outline of a cronching rider. The Manxman's engine screamed over the line at 70 m.p.h., and a tornado of cheers burst out. But they were anxious cheers, for everybody knew de la Hay had his starting debit in hand. Those who wished Brown to win prayed that de la Hay would not leap into sight for eight minutes. It was not to be. In three minutes or so No. 66 was sighted, unquestionably a good winner, and the Sunbeam flashed along the stands, going better than on its opening lap. No need to wait for its time to be painted up; but when the figures appeared, de la Hay had gained 3 min, 43 sec, over Brown on his last lap, and won a superb race by 3 min. 50 sec. at the record speed of 51.79 m.p.h.

Fastest lap: G. Dance (Sunbeam), 40m. 43s, = 55.62 m.p.h. (record). Reg. Lucas (A.B.C.) also started, but did not complete a lap.

NOTES ON THE SENIOR RACE.

After the race a spare inlet valve was taken to G. Dance's stranded Sunbeam, dropped into position, and the machine at once ridden to its garage.

Despite the inaccessibility of the mountain road the whole distance of it was dotted with spectators; many took the mountain railway to the Bungalow, and walked down to Ramsey.

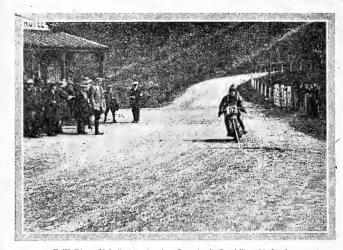

Owing to a variety troubles Jack Thomas did not finish till 3.47 p.m. He had started at 9.54 p.m., and was, of course, at the start before 9 a.m. together he was some seven hours on the job, and looked very fagged.

A very sporting run was made by Norman Black, who finished eleventh on a direct driven Norton fitted with Philipson pulley.

Only one competitor retired on the first lap, which demonstrates the excellent condition of the machines and the first-class jockeying which pleased the thousands of apectators so greatly.

Much amusement was caused at varions points by the sight of Alexander hurtling along on his Douglas after he had been almost forgotten owing to the long delay on his third lap.

Some riders never seem flurried; Victor Horsman pulled up with apparent pre-ignition on the Gooseneck (subsequently proved to be small end partial seizure). He chatted gaily while changing a plug and was amazed at the reports of Dance's speeds-he did not think that he could possibly improve his own time.

F. W. Dixon (3½ Indian) passing the "Bungalow" (Snaefell) on his first lap.

The Indians, pursuing their safety policy, were clearly ready to take advantage of any slip by the four hares in front of them.

The following dropped out during the fourth lap: N. 3.4. B. Houlting (Indian), tyre trouble at Union N. 3.4. B. Houlting (Indian), tyre trouble at Union damaged front fork; and No. 74, A. H. Alexander (Douglas), retired at depot, after three laps, with bett lastener trouble, after taking 1½ hours for lap 3, leaving 16 out of 27 starters.

Fifth Lap.

At this stage things were rather quiet, our chief interest being concentrated upon the invisible duel which D. M. Brown and de la Hay were fighting out behind the screen of hills. It is ungracious to cavil at the progress board, which on the whole played the part of a kindly telescope for the crowd. But on lap five it inadvertently announced that de la Hay had caught Brown, though a seven-minute starting difference camouflaged the narrow gap which actually separated them. The announcement was corrected in time to prevent many Manxmen from expiring of heart failure : they breathed again when No. 56 was reported as leading at Craig-na-Baa. Meanwhile another lost sheep had been traced, and Simister-missing for two laps-was reported as touring in from Hillberry, Meanwhile Walker made a prolonged stop at his cage, and A. H. Alcxander experienced just such another tardy resurrection as Dance's—a buzz of relief went through the crowd when the progress board suddenly hoisted No. 74 as having

passed Kirkmichael after two and half hours of silence.

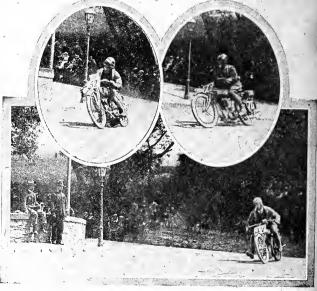

As the time drew on for Brown and de la Hay to flash past on concluding their penultimate laps, the tension became almost painful. Sympathy was torn both ways—everybody loves the Norton, a Manx winner is overdue, Brown has raced long and pluckily. On the other hand the Sunbeam is one of our premier

singles, the machine is most taking, and de la Hay a very popular fellow. Few of the visitors could decide whom they favoured, but the excitement was becoming positively unbearable. At last Brown thundered past, going magnificently; true, the lap time was slow, but it included a depot stoppage. Pulses trembled as we strained our eyes for de la Hay, and the seven-minute starting difference prolonged the agony. Reg.

Taping on handle-bar controls was general practice. The winner of the Junior event was delayed due to lack of this precaution.

Brown scrapped through meanwhile for all he was worth; Black came in on his heels and terrified the crowd by his violent braking for a depot stop. At last the board reported de la Hay at Craigna-Baa, and in an incredibly brief period the whistle, and a roaring speck far up the road heralded his approach. He came through like a demon faster than anybody had passed all day. The brushmen painted up the lap times. Hay leads Brown by seven seconds: An "Oh" was audible, as the crowd drew breath. Harveyson and D. Alexander followed presently, both going uncommonly well;

Methods of cornering at Quarter Bridge. (Top, left) Jack Thomas (Norton). (Right) F. W. Dixon (Indian). (Bottom) N. C. Sclater (Norton).

MOTOR GROLL

The Senior Tourist Trophy Race .-

but the duel between the leaders consumed everybody's attention until the end. There was little to record during this final lap, which seemed interminable. A. H. Alexander came in to retire, muttering unutterable things about belts. Jack Thomas toured in gently to finish his fourth lap. J. W. Shaw went through almost as fast as de la Hay, but well behind on nett time. Dixon passed at no very great speed. Everybody was glancing from the progress board to the clock, and back from the clock to the board.

leaving 14 survivors out of 27 starters.

During the final lap the wires were being kept busy with anxious enquiries about one or two unreported men, and the progress board consequently was unable to keep the speciators in very close

The designers of the Sunbeam and Norton machines, Messrs. J. E. Greenwood and J. L. Norton.

touch with the terrific struggle between Brown and de la Hay. Everything looked black for the Manxman. It anything, he was slowing a trifle, and the irrepressible Sumbeam had been overhauling him slowly but surely during the last four laps, picking up precious time on each circuit. Still hope springs eternal in the Celtic breast, and most of those present know how untrustworthy machinery may be when it is highly stressed. Brown was due in at 2.5 by the big clock on the judge's box, if his last lap had taken 43 min., which was about the time we credited to him. At 2.5 the board announced he was past Craig-na-Baa. The remorseless clock linger moved on to 2.6, 2.7—and at 2.8 the whistle blew, and a distant speck expanded into the outline of a cronching rider. The Manxman's engine screamed over the line at 70 mp.h., and a tornado of cheers burst out. But they were anxions cheers, for everybody knew de la Hay had his starting debit in hand. Those who wished Brown to win prayed that de la Hay would not leap into sight for eight minutes. It was not to be. In three minutes or so No. 66 was sighted, unquestionably a good winner, and the Sunbeam flashed along the stands, going better than on its opening lap. No need to wait for its time to be painted up; but when the figures appeared, de la Hay had gained 3 min. 45 sec. over Brown on his last lap, and won a super pace by 3 min. 50 sec. at the record speed of 51.79 m.p.h.

THE COMPLETE RESULTS OF THE SENIOR RACE.

Starters, Weights, Individual Lap Times, and Average Speeds Accomplished.

Rider and Machine.	Weight of Machine.	Weight of Rider.	First Lap.	Second Lap.	Third Lap.	Fourth Lap.	Fifth Lap.	Sixth Lap.	Total Time.	Average Speed.

Fastest lap: G. Dance (Sunbeam), 40m. 43s. = 55.62 m.p.h. (record).

Reg. Lucas (A.B.C.) also started, but did not complete a lap.

NOTES ON THE SENIOR RACE.

After the race a spare inlet valve was taken to G. Dance's stranded Sunbeam, dropped into position, and the machine at once ridden to its garage.

Despite the inaccessibility of the mountain road the whole distance of it was dotted with spectators; many took the mountain railway to the Bungalow, and walked down to Ramsey.

Owing to a variety troubles Jack Thomas did not finish till 3.47 p.m. He had started at 9.54 p.m., and was, of course, at the start before 9 a.m. Altogether he was some seven hours on the job, and looked very fagged.

A very sporting run was made by Norman Black, who finished eleventh on a direct driven Norton fitted with Philipson pulley.

Only one competitor retired on the first lap, which demonstrates the excellent condition of the machines and the first-class jockeying which pleased the thousands of spectators so greatly.

Much amusement was caused at various points by the sight of Alexander hurtling along on his Douglas after he had been almost forgotten owing to the long delay on his third lap.

Some riders never seem flurried; Victor Horsman pulled up with apparent pre-ignition on the Gooseneck (subsequently proved to be small end partial scizure). He chatted gaily while changing a plug and was amazed at the reports of Dance's speeds—he did not think that he could possibly improve his own time.

A TALK WITH THE WINNER,

THE SUNBEAM SUCCESS.

NATURALLY, there was great elation in the Sunbeam camp on Thursday afternoon. To get home first (at record speed), third, and ninth is no ordinary achievement. The success of Tom Corbett de la Hay was no real surprise to those who carefully study performances of riders. least of all to Mr. A. S. Bowers.

T. C. de la Hay, who won the Senior T.T. at an average speed of 51.79 m.p.h.

managing director of John Marston, Ltd. Undoubledly, de la Hay, Dance, and "Duggie" Brown started favourities. Like Brown, de la Hay enjoyed a no-trouble run throughout, and his Sunbeam was in better condition at the finish than at the start, as proved by the fact that the last lap was his fastest—a record indeed prior to Thursday. Two stops only were made for replenishments. It is testimony to the ease of control of his machine that de la Hay finished absolutely fresh, and,

De la Hay's signature of the end of the 2265 mile race.

in fact, signed his autograph for readers of *The Motor Cycle*.

Of incidents the 1920 T.T. winner had

Of incidents the 1920 T.T. winner had little to relate. He was unaware of his position, though he had been told, when filling up at the completion of the fourth lap, to ride to finish and not overdo speed. Just how much such an exbortation affects the sporting British spirit will be gleaned from the final lap speed. In the first lap a number plate came loose and daugled on the spokes during the second lap. Passing Ramsey a spectator was heard to call out that he was leading. On the last lap the descent of the mountain was a perfect whirlwind, if never before, and Windy Corner nearly proved de la Hay's undoing, for he went wide on to the bank at great speed, but successfully recrossed the gulley, and regained the road again. De la Hay's confidence in the magnificent Sunbeam he rode may be gleaned from the fact that his spares consisted of a spare exhaust valve, one plug, a chain rivet extractor, and a tube. The tool bag, however, remained sealed throughout. The gear ratios provided by the special Sunbeam geag box were 4.5, 5.9, and 8 to 1.

The equipment of the winning Sunbeam included Amac carburetter, Dunlop tyres, Renold chains, M-L magneto, and Lodge plug, whilst Pratts' spirit and Castrol "R" oil were used.

De la Hay was formerly at the Sunbeam works, but now runs the Molineux Garage at Wolverhampton.

A MANXMAN SECOND.

RESH from his memorable ride, we had a few minutes' chat with Douglas M. Brown, the Norton rider, who finished second. "Duggie," as he is popularly known, jumped from third position in the first and second laps to the leading position in the third lap, holding his lead until the end of the fourth lap, when he was displaced by the winner, de la Hay, by 7s. only, losing by but 3m. 50s. Brown is thirty-four years of age, and weighs 154 lb. His success gave immense satisfaction, for he has lived in the Island all his life, though he early joined the Forces in 1914, and was in France by September, 1914, with the second army as a despatch rider, and only returned to Manxland last March. Though he has ridden in every T.T. race since 1910, this year provided his first notycuble run, the Norton he rode actually travelling better at the finish of the 225 miles gruelling than at the start.

Over 70 m.p.h.

Geared 4, 58, and 73 to I, low gear was requisitioned only for the hairpin bend at requisitioned only for the hairpin bend at Ramsey. Though he attained over 70 m.p.h. down the mountain, Brown assured us that he never had his throttle fully open except on the mountain climb. He was not aware of his position (though the enthusiastic crowds gave him some idea), and never saw the winner, but he recalled a ding-dong struggle with Eric Williams in the second lap, when from Sulhy Bridge to Quarter Bridge they passed and repassed each other. He finally caught up Eric Williams at Quarter Bridge to Bridge soon after the latter experienced the wheel lock which led to his machine being weeked.

"Duggie" was regretful that he had been urged to case down when he was leading, as he might have coased a little more out of himself and his mount in the later stages; but, as we told him, de la Hay had, curiously enough, received exactly

Reg. Brown, who secured third place on a Sunbeam—a sister machine to de la Hay's:

similar instructions. But Brown sat his machine magnificently and judged his corners with excellent precision, though he bimself bestowed all praise on his machine.

Douglas M. Brown, the Manx rider of the Norton, with which he secured second prize.

The Norton, which has a single-cylinder side-by-side valve engine of 79 × 100 mm. (490 c.c.) bore as equipment, C.A.V. magneto, Dunlop tyres, and Senspray carburetter.

THE NESBIT AWARD.

No decision of the A.C.U. stewards was more popular, than awarding the Nesbit trophy for pluck and endurance to F. W. Applebec. Fifty-eight years of age, "Pa," as everybody knows him, once saw his son, F. A., win the Senior Trophy on a Scott. This year F. W. turned out on a Levis two-stroke of 250 c.c. in the Junior event, his ambition being to win The Motor Cycle Trophy offered to encourage lightweights. But he carried the "No. 13" on his Daby mount, and that spelt all sorts of possibilities! With a monkey mascot complete, he got away in good style, and was round to Governor's Bridge in splendid time, when the magneto rocker arm spring snapped. Now "Pa" had made sure of things by thickly smearing glue everywhere on the magneto rocker arm spring snapped. Now "Pa" had made sure of things by thickly smearing glue everywhere on the magneto cover, but having dismounted the contact breaker a new one complete was fitted. But no spark resulted, as the points broke much too far apart. Having no magneto spanner, pliers had to be used to adjust the platina. Fifteen minutes or so later F. W. was away again, his Levis droning like a giant bumblebee. "Corners he took like a two-year-old," as one observer put it. Round again. The points had unscrewed themselves. Pliers out again, and again, and so on every lap, but nothing could divert this hardy veteran from his self-imposed task of finishing creditably. Is this endurance and perseverance? With cheers such as lave never been heard on the Island before, he spurted ahead undaunted, but to the end those points refused to keep still, and coupled with three stops for petrol and oil, contrived to reduce his average speed

THE SENIOR RACE FROM VARIOUS POINTS.

CORNERING AT GOVERNOR'S BRIDGE.

Compared with the Junior T.T., the cornering work at this spot was more exciting in the Senior Race, and although there were no accidents, skidding resulted in a considerable number of cases. Undoubtedly the finest cornering was effected by D. S. Alexander on his Indian at Governor's Bridge, and on each lap he cut in close to the corner with a beautiful sweep and accelerated off around the second bend without a falter. F. C. Townshend (Sunbeam), D. M. Brown, J. W. Shaw, and G. W. Walker (Norton's) were all uniformly good, while Noel Brown took the bend well throughout the race, but braked his pachine with the throttle still open on two occasions. On their second laps three competitors came down the approach too fast. Dixon, an Indian rider, skidded, nearly struck the opposite wall, and made a violent turn to the left to bring himself in a position to get away, and Eric Williams also overshot the corner, skidded and wobbled, and had to wheel round in a similar manner. Simister managed to pull up and make a momentary halt before turning to move off. It was manifest that F. W. Dixon was, in many cases, scarificing caution for speed in cornering, for he cut in very close and wobbled several times. Harveyson and Bert Houlding, both Indian riders, made the bend very steadily and with precision on each lap.

ON THE MOUNTAIN ROAD.

A HEAT haze covered the distances on the Snaefell road, but the sunshine had dried the surface, with the exception of a small patch or two just beyond the Bungalow.

These patches were responsible for slight wobbles on the part of Dance (Sunbeam) and Dixon (Indian), who closely followed A. H. Alexander's Douglas, which was the first machine past this point. Although there are some_comparatively easy stretches between Ramsey and the Bungalow, most of the men maintained a fairly steady pace. The gentle bends on the mountain road are deceptive and most competitors indulged in cutting out, although the Sunbeams, perhaps, did least in this direction, as their road-holding properties appeared to be excellent. In almost incredibly short time Dance appeared on his second lap, being timed by amateurs, at between 39 to 41 mins.

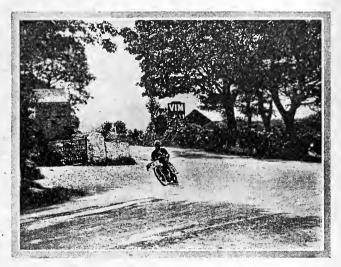

Varied Styles of Riding.

G. H. Walker appeared to be unhappy, as he stopped on his second lap, while on the third his engine emitted an unpleasant clanking.

Douglas Alexander and Dr. Lindsay.

were both riding with apparent enjoyment and repeatedly waved greetings in contrast to the majority who were very much concentrated on the road ahead.

Altogether the racing on the Snaefell section was devoid of incident; and rather gave the impression of a fast reliability trial than otherwise, as there was very little bunching of riders or overtaking. Many enthusiastic spectators walked beside the course from the Bungalow to Ramsey.

Victor Horsman (Norton) cornering well at Ballacraine.

IMPRESSIONS FROM RAMSEY HAIRPIN

THE wonderful acceleration and smooth changing of the Sunbeams were most 'noticeable after the hairpin bend. The Indians, on the other hand, were slow with the change, and though very consistent, their "get away" was not very striking. Davies (23 h.p. A.J.S.) on his one lap created a splendid impression by his neat cornering and phenomenal pick-up, and he certainly appeared to accelerate faster than any of the larger machines.

Indifferent Cornering.

Cornering on the first lap was poor, and though it improved later Dance was the only man who took the hairpin really fast. Curiously enough, as the leaders warmed up towards the end of the race, the cornering became worse, though "Duggie" Brown was an exception. and took the bend faster at each attempt. V. Horsman had a curious form of seizure which looked like pre-ignition, since his engine suddenly stopped and locked his rear wheel. A change of plug took him round the corner, but the trouble recurred and was finally located as a seizure of the small -end. Noel Brown and F. C. North on similar machines had a wonderful duel, and ran within a yard or two of each other for nearly three laps. Le Vack's Duzmo ran very consistently, and produced a wonderful duel, clan expanst note

wonderfully clean exhaust note.
On the fourth lap Capt. Lindsay came round late, and pointed to his back tyre by way of explanation. Great enthusiasm was shown by the crowd who gathered to watch the performances at this point, and no one received a better ovation than Duggie Brown, the popular Manx rider.

SENIOR T.T. TRIFLES.

The double event for Wolverhampton!

A broken saddle delayed North in his first lap. He effected a repair with bolts from the rear mudguard.

The best and most sporting race on record was the general verdict of the Senior T.T.

Once again the suggestion of a sidecar race on the T.T. course crops up. All we can retort is "spare us!"

Too fast for the course was the general feeling again this year respecting 500 c.c. machines. The Motor Cycle nrges limits of 350 c.c. for the Senior race, and 250 c.c. for the Junior event next year.

Reg. Brown is a private owner and excels at all forms of sport. On Wednesday he borrowed a horse and won the race at Bellevue, next day bringing home his Sunheam into third position.

Four Norton riders all arrived together at the gate on the Snaefell road, and it looked as though a "jam" was inevitable, as no one seemed inclined to give way. However, one got ahead, one dropped behind, and the one or two spectators breathed again!

Norman Black is a pure amateur, who had pluckily entered on a standard belt-driven Norton. His chief troubles were punctures and belt-stops, the latter being due to oil leakages. On taking out his back wheel to change a tube on the last lap he found the bearings were chewed up, and rode thirty miles with no balls in the back hub.

A NEW 350 c.c. KILOMETRE RECORD.

Dance shows the Pace of the 23 h.p. Sunbeam on Douglas Promenade.

In the Minx M.C.C. kilometre speed trials. J. W. Shaw (3½ Norton) who made fastest time in the 500 c.c. class for actual T.T. starters. His speed was 70.79 m.p.h.

OT content with their strenuous efforts in the T.T. races, most of the riders with surviving machines entered flying kilometre trials on Friday morning last. The event was organised by the Manx M.C.C., and was run off on the promenade at Douglas, where the good surface was conducive to high speeds.

The first three classes were confined to

machines which actually started in the T.T. races and the 500 c.c. mounts at once showed how well they had maintained their tune. The times given below illustrate this:

	sees.	m.p.h.
 J. W. Shaw (3½ Norton) 	312	 70.79
 G. Dance (3½ Sunbeam) 	323	 68.62
 A. Lindsay (3¹/₂ Norton) 	33	 67.79
 F. C. North (3! Norton) 	331	 66.38
F. C. Townshend (31 Sunbeam)	333	 66.27
61 (D. M. Brown (31 Norton))	33^{4}_{v}	 66.18

£200 FOR THE MANX HOSPITAL

That good sportsman, Alec Ross, with his friends, notably F. H. de Veulle and P. Olai, collected £200 for Manx hospi-tals during T.T. week. One highly successful manner of collecting coin was to fine everybody one shilling who called "Alec." Since Ross has no other name (!) money rolled in fast, and "seasons were eventually issued at 5s. a time.

H. Collier, senr., contributed £50.

There were ten other runners, and the speed of all, with one exception, exceeded 61 m.p.h.

A good show was put up by the 350 c.c.
T.T. machines, N. F. Harris (2\frac{3}{4}\) A.J.S.)
clocking 67.33 m.p.h. (3\frac{3}{2}\), with E.
Williams and H. R. Davies on similar
machines close followers at 66.18 m.p.h.
(3\frac{3}{2}\), while in the 250 c.c. class Gus Kuhn was an easy first on his Levis in 42s, (53.26 m.p.h.).

High Speeds in Open Classes.

Four classes open to any machine or rider provided some fast riding. The first event was for engines up to 500 c.c. capacity, and was easily won by Dance, riding his o.h.v. 23 Sanibeam. His speed was 75.07 m.p.h. (29%s.), which constitutes a new 350 c.c. flying kilometre record. (This awaits official confirmation.)

A SUGGESTION.

Another year the A.C.U. might oblige Another year the A.C.O. might oblige by giving individual lap times on the T.T. score board. As it was, the press were kept exceedingly busy subtracting the growing times to obtain the individual lap times. As in former years The Motor Cycle publishes this week the complete score boards for both races, showing the separate lap times, as well as total times and average speeds.

TRAVELLING ARRANGEMENTS.

Scores of motor cyclists have to thank Messrs. J. Blake and Co., the Liverpool car and motor cycle agency, for the thoughtful and excellent arrangements made to assist those travelling by road.

A petrol lorry met each boat, and returned petrol previously drained from
the tank on the outward trip to the Island, so that a prompt start could be made after disembarking.

Fleet and District M.C.C.

 A club has been formed at Fleet under the above title, with Mr. F. C. Ridler, Atlas Motor and Cycle Works, as hon. secretary. A run to Selsey-on-Sea has been arranged for the 27th inst.

North-West London M.C.C.

At a meeting of motor cyclists at the Royal Abercorn Arms, Stanmore, it was proposed that there should be formed a North-West London M.C.C. who are interested are asked to communicate with the hon, secretary, Mr. C. J. Thornewill, 9, South Mausions, Streatley Road, Brondesbury, N.W.6.

Mansfield District M.C. and L.C.C.

A general meeting of this recently formed club will be held at the." Masons' Arms," Leeming Street, Mausfield, on the 28th inst. at 7.30 p.m. All motor cyclists are invited to attend, and those desirous of becoming members should communicate with the hon, sec., Mr. G. Mills, 16, Hall Street, Mansfield.

Bury and District M.C.C.

Entries for the Windermere Trial close to-day, the 24th. This event will be Hold on the 27th, starting from the Royal Hotel, Bury, at 6 a.m. The course will run via Preston, Lancaster, Kendal (breakfast stop), Shap, Kirkstone, Windermere (lunch), returning by Kendal and Preston. Competitions will be divided into two classes: (a) all single gear machines, and machines under 300 c.c.; (b) all other machines.

Sheffield and Hallamshire M.C.C.

A reliability trial was recently held over a course of seventy miles in the Bradfield district. There were twentytwo entries, and eight failed to complete the course, which abounded with hair-pin corners, and included four severe hills.

The results were as follow:

"Harry Wilkins Cup," for solo machines.—1st (the cup and gold medal), E. Searle; 2nd (special motor cycle horn and gold medal), G. W. Wilkin; 3rd (special prize and gold medal), J. Wild-blood; 4th (silver medal and sparking plng), L. R. Kay. Bronze medals; H. Hadfield, F. J. Hall, E. Ward, L. Padley, and W. Vessey. Mr. H. Wilkins's prize for the best performance on a lowowered machine was won by G. W. Wilkin.

"Joseph Thompson Trophy," for passenger machines.—1st (the trophy and gold medal), H. Reynolds; 2nd (gold medal), S. Sawer; 3rd (gold medal), R. Stacey. Mr. Reynolds also won the Fletcher prize, and his sidecar passenger takes a special prize.

The results of the recent flexibility hill-climb held at Spout Hill, Brantingham, were as follow's Solo .- 1st, W. W. S. Grantham (4 Harley-Davidson), time variation 5m. 35s.; 2nd, N. W. Walker (3½ N.U.T.), 3m. 49s.; 3rd, E. Brown (4 (No. 1), 3m. 23s. Sidecar.—1st, W. Harrison (4 Douglas sc.), 5m. 45s.; 2nd, W. J. L. Snllivan (44 B.S.A. sc.), 5m.

Wolverhampton M.C.C.

The results of the competition for the Corke cup, held recently by the above club, were as follow: 1, F. W. Giles (6 A.J.S. sc.); 2, Geo. Stephens (6 A.J.S. sc.); 3, H. Tayler (2½ Diamond).

Cheltenham M.C. and L.C.C.

This club will hold one of its annual hill-climbs on July 3rd, when an in-teresting and sporting trial will be organised. The hon. secretary is Mr. C. H. Dickins, 8, Park Road, Cheltenham.

The Leeds and District M.C.

A meeting of the above club was held at the headquarters, the Griffin Hotel, on the 10th inst., to discuss the question of the Leeds-London and back Reliability Trial. Representatives of various other clubs in the district attended, and it was arranged that this trial should be held on July 24th and 25th.

Surrey M.C.C.

This club is holding its sixth annual Exeter reliability trial, for the Trimmph challenge cup on the 27th inst. The event is open to members only, and all types of motor vehicles up to 1,100 c.c. are eligible. Starting from the Angel Hotel, Guildford, at midnight 26th-27th, competitors will follow a course via Winchester, Salisbury, Yeovil, Chard, and Honiton, returning by Dorchester and Farnham.

Liverpool M.C.

The following team has been chosen to represent the club in the M.C.C. team trial, June 26th: Solo.—E. L. Boston (3) Sunbeam), H. Roberts (44 B.S.A.), and G. S. Boston (52 Sunbeam). Reserve, N. C. Sclater (3½ Norton). Sidecars.—V. Horsman (4 Norton sc.); N. H. Brown (7-9 Indian sc.), and O. Wade (6 A.J.S. sc.). Reserve, G. Roddick (7-9 Harley-Davidson s.c.).

The team will leave Horsman's Garage, 7, Mount Pleasant, punctually at 10 a.m. on Friday.

Southport A.C.

Several thousand people gathered to witness the recent speed trials held by this club on the foreshore. The course was approximately one kilometre in length and seven motor cycle events, including one for scooters, comprised the programme. Three aeroplanes from the Golden Eagle Aviation • Co. were assembled, together with a large number of cars, and free flights were offered to the winning competitors. The 300 c.c. and 350 c.c. classes were run off in fine weather, and were won by W. S. Life (21 Diamond-Jap), but during the 500 c.c. heats a terrible rainstorm descended. The remaining classes will be run off on the 26th inst.

lub News .-

Marlow and District M.C.C.

A picnic run was held on the 13th nst., when the club visited Bucklebery Common. A good number of members nrned out, and a most enjoyable afteroon was spent.

Redditch and District M.C.C.

Thirty-four competitors started in the half-day trial for the President's Cup, held recently over the Cotswold Hills to Cheltenham. The well-known Saintbury and Snow hills were included in the utward journey, and Rising Sun, Sudeey and Willersley hills on the return, all of which took their toll of marks. The sup and gold medal were won by R. H. (Vicholls (44 B.S.A. so.). Special class and gold medal were won by R. H. Nicholls (4\frac{1}{4}\) B.S.A. sc.). Special class prizes went to F. Bicknell (8 Enfield c.) 1,000 c.c., L. C. Sealey (4\frac{1}{4}\) B.S.A.) 500 c.c., and H. Hanks (2\frac{1}{4}\) Enfield) 350 c.c. The hest amateur performance was nade by T. M. Shrimpton (4 Triumph).

Birmingham M.C.C.

The following is a list of awards in the Land's End Trial for the Lycett Trophy:

And's End Trial for the Lycett Trophy:

BRACKETED EQUAL TROPHY WINNERS.

N.M.C.F.U. (Rotherham),

Two events, a slow race and a hill-climb, were held recently at Hoober Stand, Wentworth; both being well supported. The results were as follow: ported. The results were as follow: Slow race solo—A. Doult (Wooler). Sidecars and light cars—C. Brown (Morgan). Hill-climb 4 h.p. solo and sidecar classes—W. Pashley (Triumph). 6-8 h.p. class—G. Guest (Harley-Davidson).

Oxford University M.C.C.

An inter-'Varsity speed trial between the Oxford and Cambridge M.C.C.'s is to be held on Brooklands track on August 7th. Entries may be received up to the end of July by the secretaries. The address of the secretary of the above club will in future be J. E. G. Harwood, Christ Church, Oxford; or in vacation, Woodhouse, Almondshury, near Bristol, and not as previously, 165, Walton Street,

Westmorland M.C.C.

The latest enterprise on the part of the members of this club was to attempt the climb of Walma Scar and Coniston Old Man, two of the highest mountains on the west side of Lake Windermere. Though Walma Scar was a difficult climb, it was accomplished with comparative ease by H. Jackson (Chater-Lea), S. Bewsher (Rover), and Gilbert Brown (Triumph). Coniston Old Man proved much more difficult. The gradient of 1 in 2½ and the bad surface made riding difficult, and the descent was even more dangerous than the climb. Though none of the competitors succeeded in reaching the summit, P. Hoggarth (4 h.p. Triumph), S. Bewsher (32 h.p. Rover), and Whiteside (23 h.p. A.J.S.) nearly succeeded. After the climb, tea was taken at the Black Bull Inn and the Sun Hotel.

Bedford and District M.C. and L.C.C.

Arrangements have been made to hold a hill-climb for one of the club trophies on July 1st. Full particulars of this event can be obtained from the hon. secretary, Mr. H. H. Berrie, Goldington, Bedford:

Torquay M.C.C.

This club has recently been formed, This club has recently been formed, and is receiving widespread support. A very comprehensive programme has been arranged, and affiliation to the A.C.U. applied for. The president is Col. Burn, M.P., and hon, secretary Mr. A. G. Goldsmith, 55, Parkfield Rd., Torquay. The opening run was made to Haytor, where tea was taken at the Moorland Hotel.

Dewsbury and District M.C.C.

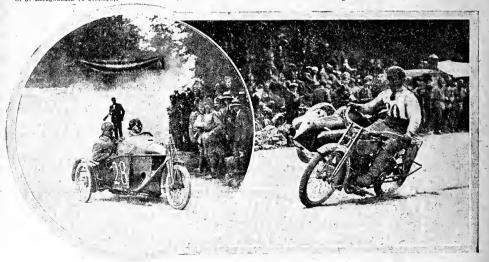

Recently this club held a slow hill climb and potato race at Burfitt Hill. The course was threequarters of a mile The course was threequarters of a mile in length, and a good number of competitors took part. The results were as follow: Slow climb.—Solo, C. H. Rayner, 4m. 32s.; sidecar, H. Shadlock 7m. 3s. Potato race.—Solo, B. Lodge 1m., C. H. Rayner 1m. 55s., C. E. Wilcock 1m. 10s.; sidecar, A. E. Scargill 1m. 8s., and H. Shadlock 1m.

North London M.C.C.

Recently a picnic was held by this club amidst the picturesque scenery of Bricket Wood

The club will be strongly represented in the M.C.C. inter-club trial on the 26th inst., and members are going out to Tring in force to view the trial.

Secretaries of clubs within a reasonable distance of North London are requested to communicate with Mr. Bernard Staley, Victoria Avenue, Finchley, N.3, with a view to ecoperating in the big rally on August 8th.

SCENES IN THE RECENT CIRCUIT DE FONTAINEBLEAU MOTOR CYCLE RACE. (Left) A three-wheeler of unusual design. The Cyclauto, driven by Rouguet in the race. (Right) Verpault (Harley-Davidson), who made fastest time in the 1,000 c.c. class, lifting his sidecar to facilitate cornering.

THE CLUB CHAMPIONSHIP FOR 1920.

28 Teams to Compete for "The Motor Cycle" Challenge Cup in the M.C.C. Team Trial next Saturday,

STARTING at Tring at 1 p.m. on Saturday next, 28 teams are entered to compete for the club championship for 1920. The course is approximately 100 miles, consisting of three circuits. Each rider may select any speed between 17 and 20 m.p.h. for his first circuit, and consistency of driving will be determined by his repeating as nearly as possible his first circuit time in the second and third circuit. In the event of more than one complete team covering the whole distance without a single stop, other than provided for, consistency of driving will be the determining factor, and the riders who adhere most closely to their first circuit times in their second and third circuits will be adjudged the winners.

The following are the teams nominated by the clubs concerned: Starting

Awards in the Ilkley Open Trial.

Starters, 116; Retired, 27; First-class Certifica es, 29; Second-class, 20; Third-class, 29: Too Late for Award, 11.

THE very sporting one-day trial organ-ised by the likley M.C. and L.C.C., and fully reported in our issues of June 10th and 17th, did not cause so many retirements as might have been ex-pected. Of the 116 starters, 89 survived the course, although 11 of them were too late to qualify for a certificate. Amongst the 27 who qualified for first-class awards, 20 lost no marks at all, and from these

the winners of the awards shown in the next column have been selected ; A.B.C. Sub-Lt. Jameson. Second class. E. A. Colliver. First class. E. Porter. First class. E. Porter. First class. H. W. Merrall. No award. J. Whalley. First class. A. B. Green. Third class.

S. Raynes (sc.). No award.
G. Fletcher (sc.). Third class.
J. S. Wilson (2%). Retired.
*A. Lucas (sc.). First class.

ARIEL.
*F. H. Longman (3½). First class.

AUTOGLIDER. R. T. Cawthorn, Third class.

RELIABILITY with LOW COST

HE experience of the designer and the manufacturer of the R. W. SCOUT, Mr. R. Weatherell, in every phase of Motor Cycling, under all and every condition, is beyond doubt very extensive. After experimenting on various types of two-stroke machines for the past 8 years, we are now able to place on the market the most reliable, economical, and most speedy machine ever produced and at a low cost. Severe tests have been made in hil'-: limbing, etc., and the R.W. SCOUT has proved beyond doubt absolutely perfect in every detail.

Abridged Specification:

Engine.-Specially designed 3 b.p. Dalm Engine, wo atroke.

Frame.—Specially designed for strength and giving comfortable riding position.

Petrol Consumption during tests has proved to be in the region of 120 miles to the gallon, due to special design of the engine.

All Materials used in the construction of this machine are carefully selected, and tested before erecting the machine, and we surrante a tensile strength of over 15 tons in our Cylinder Pistons, and Flywhcels, workmanship is of the very best, and all parts are interchangeable.

Price: 52 Guineas.

To obtain particulars and specification of the R. W SCOUT, apply to Dept. B. for Illustrated Leaflet, which which will be sent free on application.

MOTOR WORKS, SOUTH GREEN, BILLERICAY ESSEX.

Telephone · No. 18, Billericay.

"Weatherell, Motors, Billericay."

The "Motor Cycle" Trophy offered to develop the ultra efficiency of the small capacity engine, produced results beyond the expectations of the donors. The results were:

> Mr. R. O. CLARKE (21 Levis) FIRST. Mr. GUS KUHN (21 Levis) SECOND.

Both Machines were Fitted with Senspray Carburetters, and in spite of a fall, and a puncture involving several miles ride on a flat tyre, Mr. Clarke finished 4th in the Junior Race, beating 5 machines of other makes, of 100 c.c. larger capacity, Mr. Kuhn finishing 7th.

The Senior T.T.

Mr. D. M. BROWN (3½ Norton) SECOND. Fitted with the Senspray Carburetter.

All "Sensprays" used were absolutely standard in all respects, as supplied to the public, and were not specially made for the race.

ROUTE BOOK

With Road Maps of England & Wales. Scotland, and the London District

A WELCOME departure from the stereotyped form of road book is made in "THE MOTOR CYCLE" ROUTE BOOK. In addition to the usual routes from Fondon, radiating main routes are given from other large and wondon, radiating main routes are given from other large and populous centres in England and Wales, and Scotland, as well as "linking-up" routes from all other cities and towns of fair-size. The intersecting or linking-up routes are clearly shown by reference numbers. The items of interest off the main roads are described by the well-known authority on roads. Mr. Chas. G. Harper.

A useful set of Maps of England Wales, and Scotland, in Atlas form, and printed in red and black, is included.

Price 5/- net. By Post, 5/6.List of Contents.....

Athough our ever-increasing circle of frends realise every day more clearly the definite advantages that attach to trading with us, there are circumstances that make it possible for us to give even greater advantages at certain periods.

(At present, owing to the conclusion of the Summer Termat Oxford very many machines are changing hands, and these can be offered while they last at prices that represent bargains in the most positive sense of the word.

Our wider circle of friends can have de on application by postcard. Machines may in every case be had on approval To these who are new to us, we beg to point out that business by pist is a special feature with us, and that their letters will in each case be treated as a call in person. Here are a lew examples taken at random from our June list-

A few figures

The majority of riders use Huile de Luxe when aware of the strictly reasonable price at which this famous lubricant can be obtained.

Huile de Luxe

either grade,

in qt. tins sells at 14/- per gall.

in ½-gall. tins " 11/6 per gall.

in 1-gall. tins ,, 10/- per gall.

in 2-gall. tins ,, 9/6 per gall.

in 5-gall. drums ,, 7/5 per gall.

for Sidecarring

the 5-gallon drum is most economical and is generally purchased

The soloist, on the other hand, should seriously consider the 2-gallon tin in preference to the comparatively expensive quart.

These are stocked by the leading Cycle and Motor Agents. everywhere.

We nave ready an interesting illustrated leaflet showing how you can pour oil from a drum without spilling a drop

Write for this.
